

"Accounting and Bookkeeping plugin for RISE CRM"

Created: 2022-09-07
By: greentech_solutions
Email: sales@gtssolution.vn

Thank you for choosing Accounting and Bookkeeping plugin for RISE CRM. If you have any questions that are beyond the scope of this help file, please feel free to email us via the support item on Codecanyon.

A) Upload & activate the plugin

* Prior to starting the installation, please make sure that no `open_basedir` restriction is applied to your PHP configuration and that `shell_exec` is enabled. Whereas 95% of the hosting providers around got a proper config that includes the above guides, you may need to adjust your PHP configuration settings if your provider offers these settings disabled by default.

- Steps of Installation:

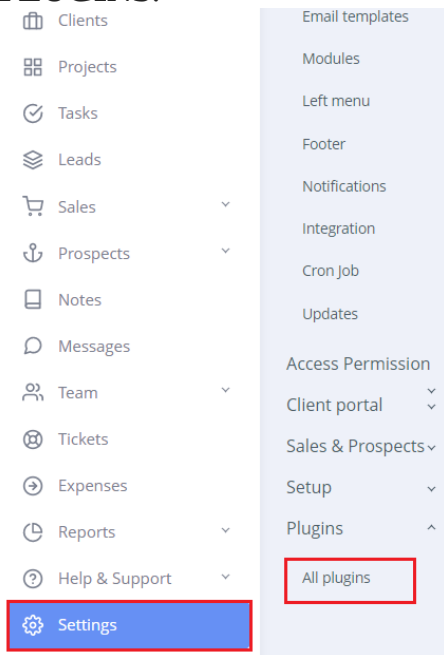

1. Extract your downloaded file content. You will notice a folder called "**documentation**" and a new zip file called "**upload.zip**". Since the "**documentation**" folder contains documentation files and helpful instructions that are not needed in your RISE CRM's installation, we will focus on the "**upload.zip**" file.

Name	Size	Packed	Type	Modified	CRC32
..			File folder		
documentation			File folder	09-May-20 7:2...	
upload.zip	89,929	83,101	WinRAR ZIP archive	09-May-20 8:0...	0F3E5E9E

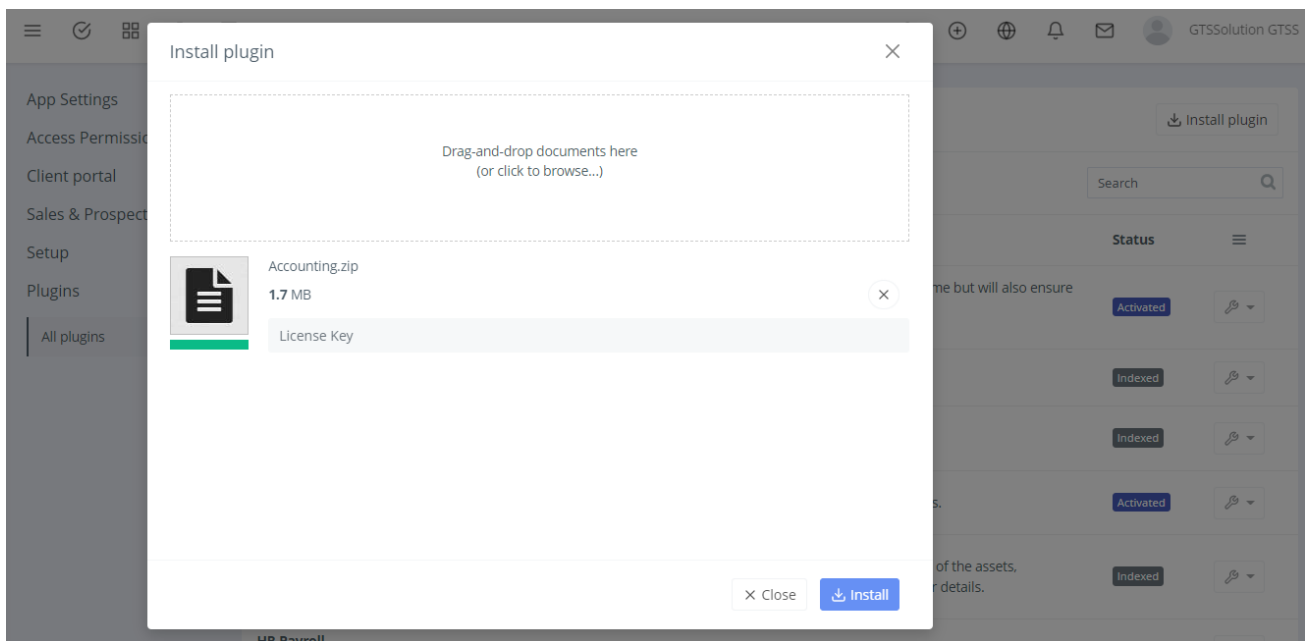

2. "**upload.zip**" contains the plugin files (in a plugin format) that you upload in RISE CRM's Plugin installation section.

Name	Size	Packed	Type	Modifi
..			File folder	
documentation			File folder	09-Mi
upload.zip	89,929	83,101	WinRAR ZIP archive	09-M

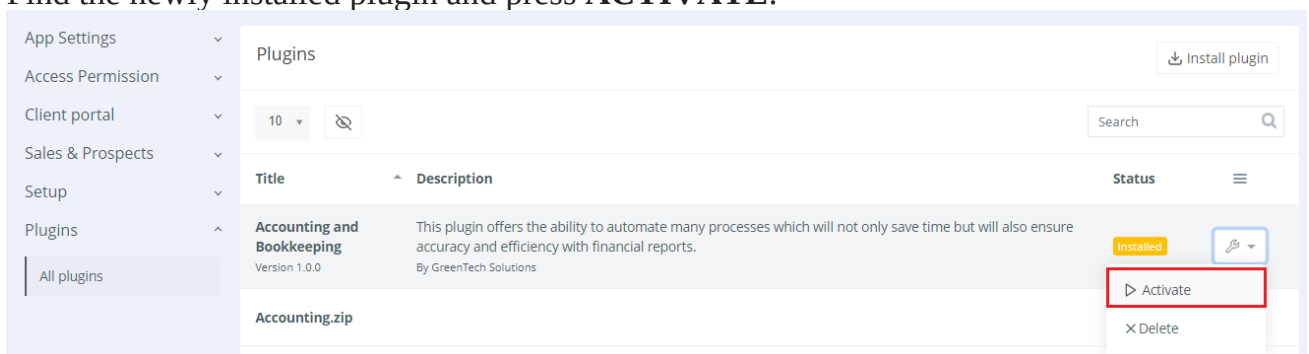

- Go to your RISE CRM's Admin area and select the following menu item: **SETTINGS > PLUGINS.**

- Select the extracted **upload.zip** at the Plugin installation selection prompt and press **INSTALL.**

- Find the newly installed plugin and press **ACTIVATE.**

- You will be told that the plugin is successfully activated.

B) How to use the Accounting and Bookkeeping plugin

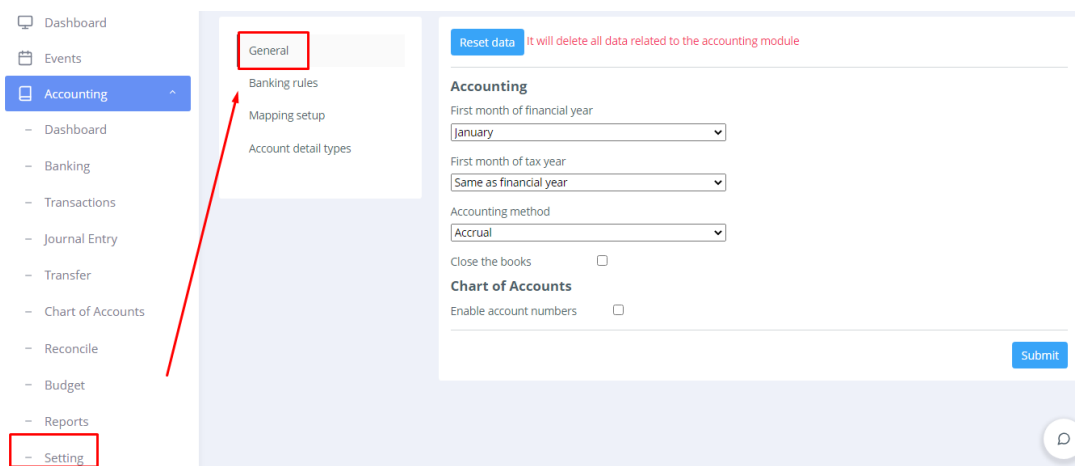

- The Accounting module is used to record and track financial data to see the financial position of an entity

1. Settings (Settings before doing)

- The screens in the Settings menu are used to set the input data used for the Accounting module.

1.1. General

- Step 1: Select the Accounting module -> Select the Setting menu -> Select the General screen.

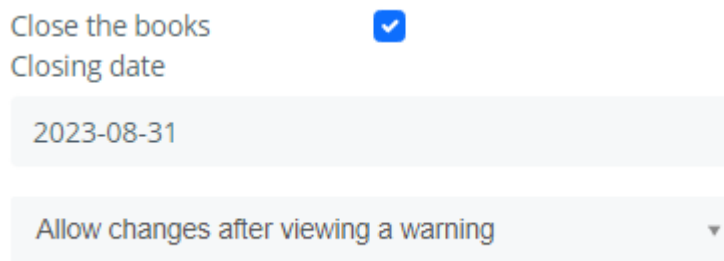

- Step 2: Select the necessary data to set up the data for Accounting -> Then select the Save function to save the action you just performed.

* Explanation:

- The Reset Data function, when used, will delete all data related to the Banking, Transactions, Journal Entry, Transfer, Chart of Accounts, Reconcile, and Budget menu screens previously created. However, the Chart of Accounts screen only deletes the manually created data; the default data remains.
- The First Month of the financial year field is used to select the start month of the Financial Year. The default is January. A financial year is a period of 12 months and does not necessarily begin at the beginning of the calendar year.
- The First month of the tax year field is used to select the first month of the tax year. There are two options:
 - Same as financial year: the month of tax calculation is the same as the month of the Financial Year
 - January: Tax calculation starts in January and ends at the end of December

- The Accounting method field has two options:
 - Accrual: used to report income after you invoice customers
 - Cash: used to report income after you receive payment from customers
- ➔ When you use the Accrual method in a report:
 - Your statements count income and expenses as if they occurred when you billed or received them
 - It includes income and expenses without actual payment
- The Close the books field is used to close the book. This function helps to ensure that the data entered into the accounting software is correct so that financial statements can be prepared and completed. Reports alert management to how much money is flowing in and out of business. Management will use the financial statements to analyze the financial aspects of the business and will decide how to improve it.

Close the books ☒

Closing date

2023-08-31

Allow changes after viewing a warning ▼

- After turning on Close the books, it will proceed to choose an automatic closing date. *Any transactions that occur on this date and before will be protected if we attempt to change. When one transaction occurs on this date or before this date will receive one alert*
- Is the Chart of Accounts field used to enable the Enable account numbers field allowed to work

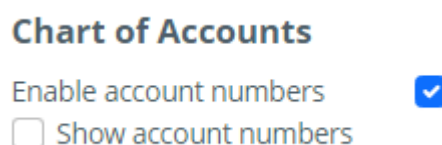

Chart of Accounts

Enable account numbers ☒

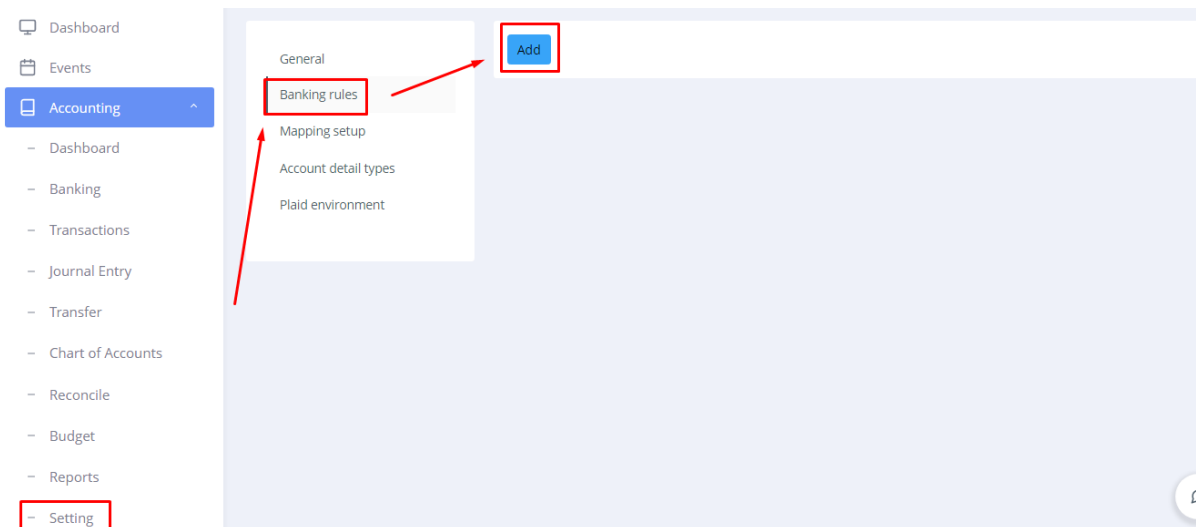

☐ Show account numbers

- If check option **Show account number**: Show account number on reports and transactions and chart of account
- Otherwise, if you don't check the option **Show account number**: do not display the account number in reports and transactions and chart of account.

1.2. Banking rules

The banking rules screen is used to create and manage the data used for the automatic classification of common recurring transactions

- Step 1: Select the Accounting module -> Select the Settings menu -. Select the Banking rules screen -> Select the Add function on the screen

- Step 2: The system will display the Banking Rule screen -> Enter the necessary data -> Then select Save to save the action you just made

Banking rule

Name

Apply this to transactions that are and include the following

Description Contains

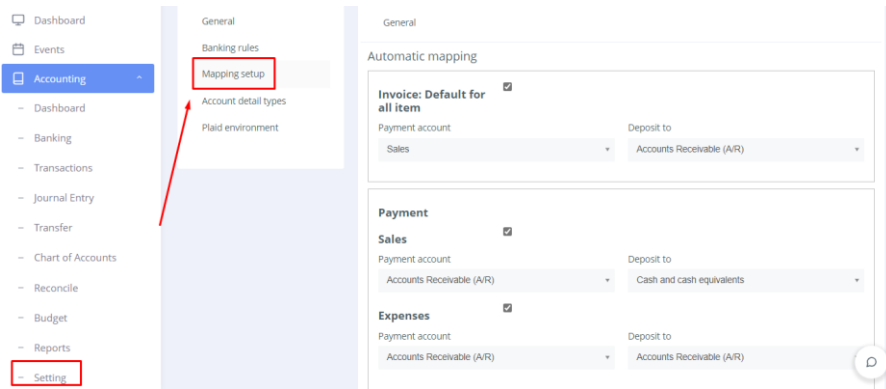

Then

Payment account Deposit to

Automatically confirm transactions this rule applies to ☐ Auto-add

1.3. Mapping setup

- The Mapping setup screen is used to set up data to automatically map the amount to the accounting accounts when transactions arise.
- Step 1: Select the Accounting module -> Select the Settings menu -> Select the Mapping setup screen

- Step 2: Carry out the necessary operations to set up the data -> Select Submit to save the operation

1.3.1. Automatic mapping area

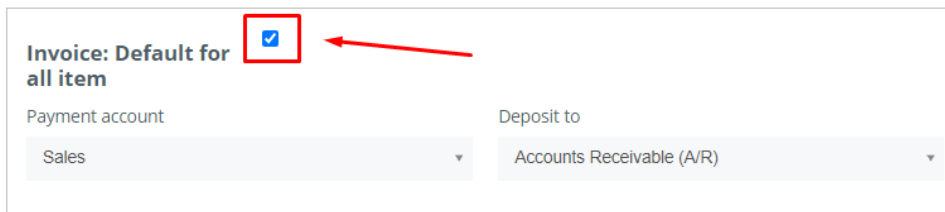

- Used to set up transactions and accounts will be automatically reflected in the system such as Invoice, Expense, Payment, Credit note

This screenshot provides a detailed view of the 'Automatic mapping' configuration area. The left sidebar shows 'Banking rules' and 'Mapping setup' (selected). The main area contains several sections, each with a checkbox and a 'Payment account' dropdown menu. The 'Invoice: Default for all item' section is checked and set to 'Sales'. The 'Payment' section is checked and set to 'Accounts Receivable (A/R)'. The 'Expenses' section is checked and set to 'Accounts Receivable (A/R)'. The 'default_lang.credit_note' section is checked and set to 'Accounts Receivable (A/R)'. The 'Expense default' section is checked and set to 'Cash and cash equivalents'. The 'Tax default' section is checked and set to 'Income tax payable'. A 'Submit' button is located at the bottom right.

*Explain:

- When checking the boxes, it will enable/disable the automatic mapping function

Automatic mapping

Invoice: Default for all item ☒

Payment account: Sales

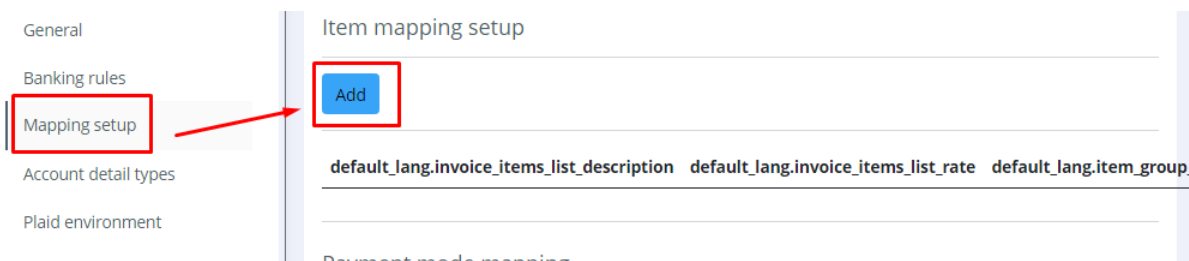

Deposit to: Accounts Receivable (A/R)

1.3.2. Item mapping setup area

- Used to set up special mapping cases for items when a transaction occurs (Currently, this item is only available and affects when mapping invoice)

🌈 To create a special mapping case for items when a transaction occurs, we proceed as follows:

- Step 1: At the Mapping Setup screen -> Select the Add function in the Item mapping setup area

General

Banking rules

Mapping setup

Account detail types

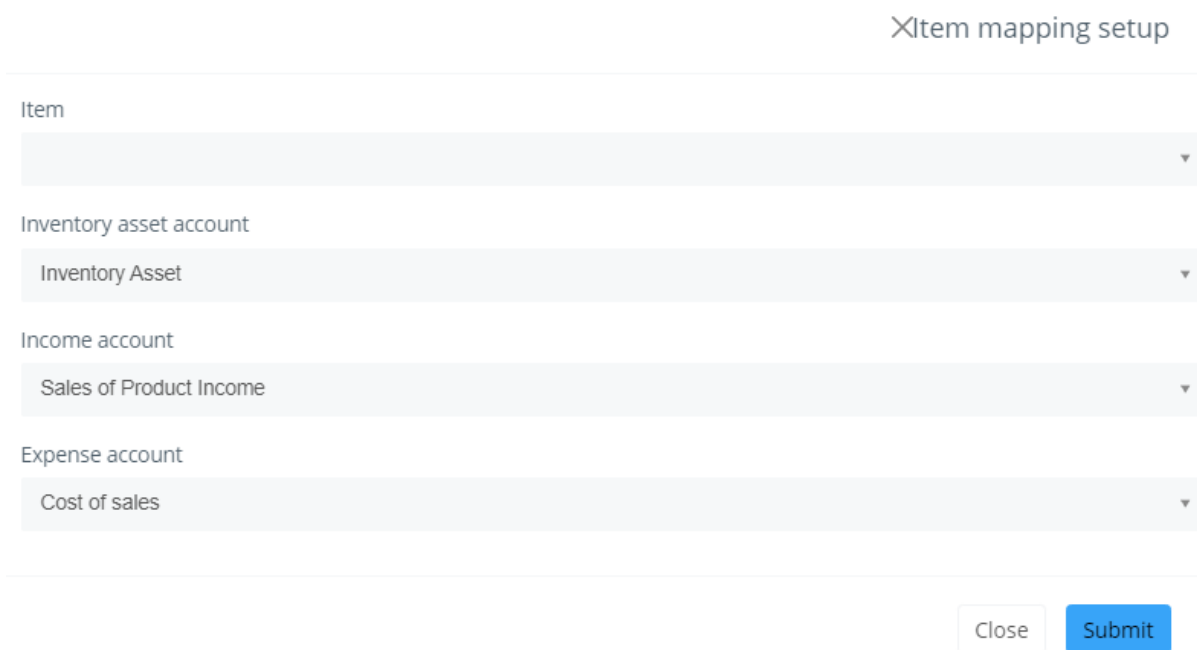

Plaid environment

Item mapping setup

Add

default_lang.invoice_items_list_description	default_lang.invoice_items_list_rate	default_lang.item_group
Payment mode mapping		

- Step 2: The system will display the Item mapping setup screen -> Proceed to enter the necessary information to create new data -> Then select Submit to save the operation just done or select Close to cancel the operation and return to the previous screen

Item mapping setup

Item

Inventory asset account

Inventory Asset

Income account

Sales of Product Income

Expense account

Cost of sales

Close Submit

* Explanation:

- The Item field is used to select the products that will have the accounts mapped. This field data is taken from the Item menu screen of the Sale module
- Inventory asset account field: The account will be mapped when we import this product into the inventory (the current version has not processed this field, just stopped at the declaration level)
- Income account field: The account will map when we generate a profit from this product (the current version only processes when an invoice is generated, other data will be updated and processed in the future)
- Expense account field: The account will map when a cost is incurred from this product (the current version does not have details of each product, so this field stops at the declared level)

1.3.3. Payment mode mapping area

- Used to set up special mapping cases for payment methods when a transaction occurs (Currently, this section only affects payment, expense, and purchase payment mapping when the purchase is integrated)
- When checking the box, it will allow you to turn on / off the auto-mapping function according to the payment method.

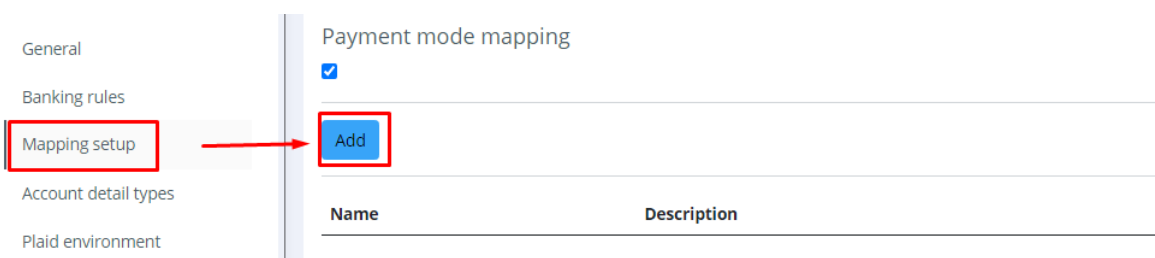

Payment mode mapping ☒

Add

🔧 To create a new special mapping case for payment methods when a transaction occurs, we do the following:

- Step 1: Select the Accounting module -> Select the Settings menu -> Select the Mapping setup screen -> Select the Add function available in the Payment mode mapping area

General

Banking rules

Mapping setup

Account detail types

Plaid environment

Payment mode mapping ☒

Add

Name	Description
------	-------------

- Step 2: The system will display the Payment mode mapping screen -> Enter the necessary information to create new data -> Then select Submit to save the action you just performed or select Close to cancel the operation and return to the previous screen

XPayment mode mapping

default_lang.payment_mode

Cash ▼

Sales

Payment account: Accounts Receivable (A/R) ▼

Deposit to: Cash and cash equivalents ▼

Expenses

Payment account: Accounts Receivable (A/R) ▼

Deposit to: Accounts Receivable (A/R) ▼

Close Submit

* Explanation:

- The Payment mode field is used to select the payment method to be specially mapped
- The Sales field is used to select the accounts to map when recording sales payments of invoice
- The Expenses field is used to select the accounts to map when recording expense payments (Currently, expenses do not have a separate payment creation section, so the payment method section of the expense will be used for mapping)

1.3.4. Expense category mapping area

- Used to set up special mapping cases for expense categories when a transaction occurs (Only affects expenses when mapping)
- When checking the box, it will enable/disable the automatic mapping function by expense categories

Expense category mapping

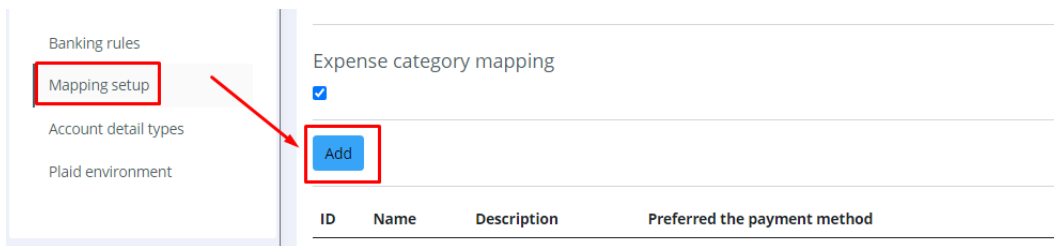

☒

Add

ID	Name	Description	Preferred the payment method
----	------	-------------	------------------------------

🌟 To create a new special mapping case for expense categories when a transaction occurs, we do the following:

- Step 1: Select the Accounting module -> Select the Settings menu -> Select the Mapping setup screen -> Select the Add function available in the Expense category mapping area

- Step 2: The system will display the Expense category mapping setup screen -> Enter the necessary information to create new data -> Then select Submit to save the action you just performed or select Close to cancel the operation. And return to the previous screen

XExpense category mapping setup

default_lang.expense_category

Miscellaneous expense ▼

Payment account Deposit to

Cash and cash equivalents ▼ Uncategorised Expense ▼

☐ Preferred the payment method

Close Submit

* Explanation:

- The Expense Category field is used to select an expense category that will have a special mapping. This field data is taken from the Expense Category screen in the Finance menu of setup
- Payment account field to select the payment account to map
- A deposit to the field is used to select the receiving account when mapping
- Preferred the payment method field: If selected, priority will be given to the payment method. If not selected, priority will be given to the expense category. (There will be cases where an expense has two mapping conditions, namely by payment method and expense category. Then we must choose one of the two to perform the mapping)

1.3.5. Area Tax mapping setup

- Used to set up special mapping cases for taxes when a transaction occurs. The data here will affect the tax of the invoice and expense

🔧 To create a new special mapping case for tax when a transaction arises, we do the following:

- Step 1: Select the Accounting module -> Select the Settings menu -> Select the Mapping setup screen -> Select the Add function available in the Tax mapping setup area

- Step 2: The system will display the Tax mapping setup screen -> Enter the necessary information to create new data -> Then select Submit to save the action you just performed or select Close to cancel the operation and return to the previous screen

* Explanation:

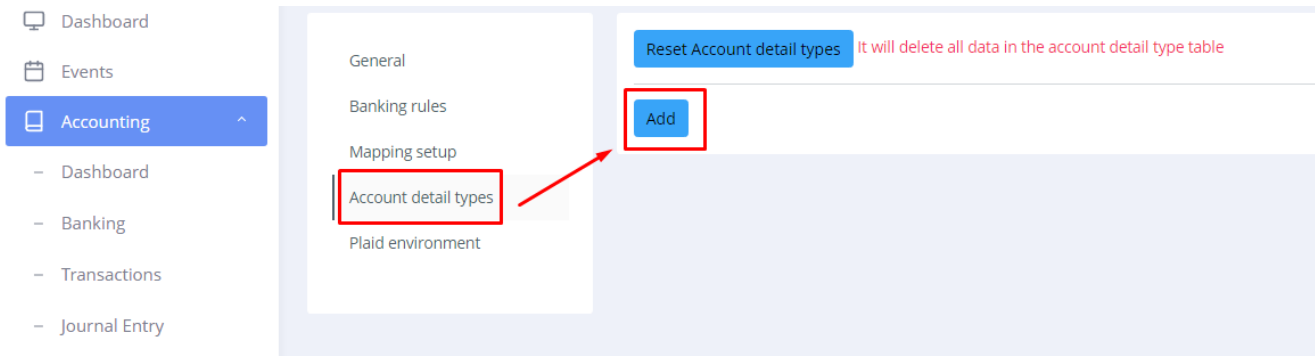

- The TAX field used to select taxes will have a special mapping. This field data is taken from the Taxes screen of the Sales & Prospects menu in the Settings module
- The Sales field is used to select the accounts to map when recording sales tax (Invoice Tax)
- The Expenses field is used to select the accounts to map when recording the tax of the expense (Tax of expense)

1.4. Account detail types

- The Reset Account detail types function, if selected, will delete all data in the Account detail type table.
- The newly added Account detail type data for the account in this screen will be used in the Chart of Account screen when adding a new Account.

🌈 To add new details for an account type, we will proceed as follows:

- Step 1: Select the Accounting module -> Select the Settings menu -> Select the Account detail types screen -> Select the Add function in the screen

- Step 2: The system will display the Account detail types screen -> Proceed to enter the necessary information to create new data -> Then select Submit to save the action just performed or select Close to cancel the operation and return to the previous screen

XAccount detail type

Account type

Name

Statement of Cash Flows

Description

* Explanation:

- The Account type field is used to select the type of account to create the Account detail type.
- The Name field is used to enter the name of the part type
- The Statement of Cash Flows field is used to select where this account type should be displayed in the Statement of Cash Flows report.
- Cash flows from operating activities: (CFO) shows the amount of money the company brings in from business activities such as manufacturing and sales. This is the first part of the Statement of Cash Flows Report
- Cash flows from investing activities (cash flows from investing activities - CFI): money generated or spent from investment-related activities such as buying assets and supplies, investing in securities, or selling securities or asset

- Cash flows from financing activities: (Cash flows from financing activities - CFF) shows the net cash flows used to finance the company. Financial activities include transactions involving debt, equity, and dividends.
- Cash and cash equivalents at the beginning of the year: (Cash and cash equivalents - CCE) includes cash, bank accounts, and marketable securities.

1.5. Plaid environment

- Setup to connect to Plaid API. First, we must have an account on Plaid API. (<https://plaid.com/>)
- Plaid environment:
 - Live: For actual running, real connection to the bank. This mode requires an account and the Production access step from Plaid API.
 - Sandbox: mode running on the sandbox environment will not connect to the real bank, and the data will be test data. The key to this mode we will get from the Plaid account.
- client_id: This is the identifier of the account on Plaid. We'll take it from the Plaid account.
- Secrets:
 - Live: key for live mode
 - Sandbox: key for the sandbox mode

2. Banking

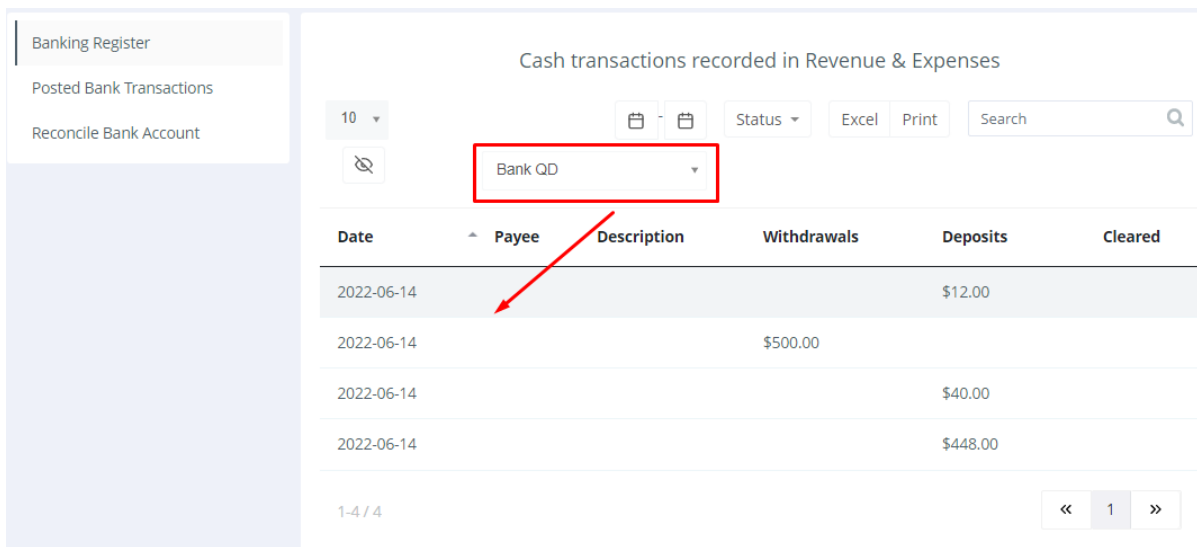

🔗 To perform Banking transactions, we proceed as follows:

- Step 1: Select the Banking Register screen (section 2.1) to see an overview of manually entered transactions related to the account
- Step 2: Then go to the Posted bank Transactions screen (Section 2.2) to update the account transactions from the bank to the bank.
- Step 3: Finally, select the Reconcile Bank Account screen (section 2.3) to compare transactions related to your bank account.

2.1. Banking Register

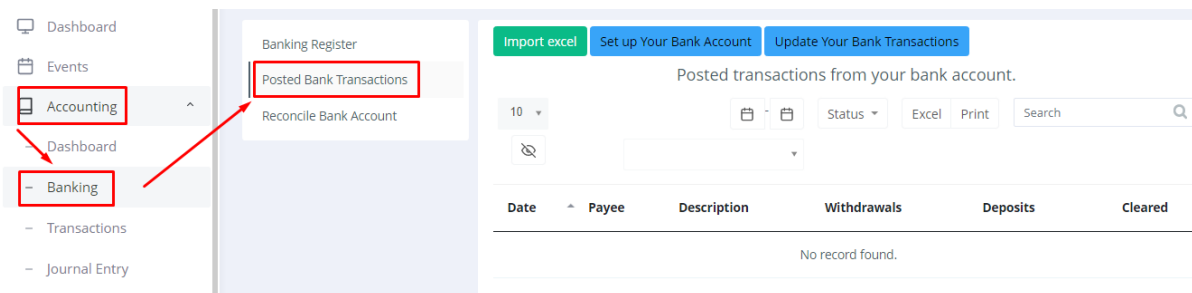

- Select the Accounting module -> Select the Banking menu -> Select the Banking Register screen

- The screen is used to display the entries related to the bank accounts in the system.
- By default, the data will not be displayed at first; when selecting a bank account, it will be displayed.

2.2. Posted bank Transactions

- Select the Accounting module -> Select the Banking menu -> Select the Posted bank Transactions screen
- The screen is used to display transactions taken from the bank, can be from Plaid API, or can also be imported directly.
- The data at this screen will be used for the Reconcile Bank Account screen
- By default, the data will not be displayed at first; when selecting a bank account, it will be displayed
- The Import excel function is used to manually import transactions related to bank accounts. No need to go through Plaid API.
- Set up your Bank Account function is used to connect to the bank via Plaid API
- Update Your Bank Transactions function: when connected to the bank, this button can be used.

2.2.1. Import excel

- Step 1: At the Posted bank Transactions screen -> Select the function Import excel

- Step 2: The system will display the Import screen -> Proceed to select the Download the template function to get the template to import to the computer (1) -> Then proceed to enter the necessary information into the excel file and move to step 3

* Note: Date, Withdrawals, Deposits, and Payee fields are required to enter valid data and cannot be left blank

- Step 3: After entering the information ready to import, on the system screen, select the Bank Account you want to import data into (This field takes the data from the Chart of Accounts screen and only takes the Detail type data). of type Bank) -> Continue to select Upload file to upload files to the system -> Select Import -> If the uploaded file has errors -> Proceed to step 4

* Note: Data after successful import will be displayed on the Posted bank Transactions screen

- Step 4: If the uploaded file has an error, the system will display a detailed message detailing the number of lines of data imported successfully and the number of lines of import failure -> Proceed to select the Error Download function to download the file containing the imported data. Import and wrong data information to edit and import again

DOWNLOAD THE TEMPLATE

1. The column with the symbol "*" is required to enter.
3. Format the excel file to (type: text) before uploading

Bank ABC

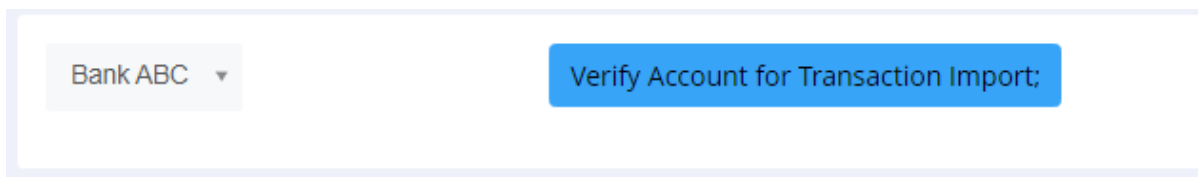

Bank ABC

Bank ABC

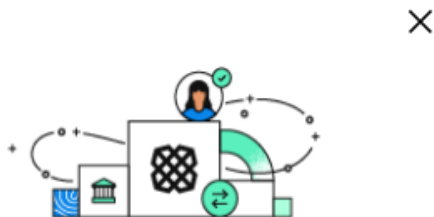

- Step 3: Then the system will display the function Verify Account for Transaction Import -> Proceed to select the function

* Note: If the function does not work, it is because the customer has not set up the data in section 1.5

- Step 4: Then, the system will display the Plaid Test App screen -> select the Continue function to continue

Plaid Test App uses **Plaid** to connect your account

Connect effortlessly

Plaid lets you securely connect your financial accounts in seconds

Your data belongs to you

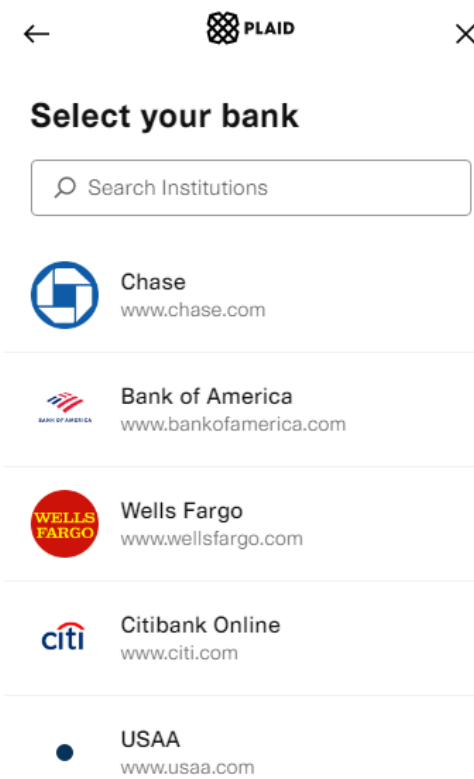

Plaid doesn't sell personal info, and will only use it with your permission

By selecting "Continue" you agree to the [Plaid End User Privacy Policy](#).

Continue

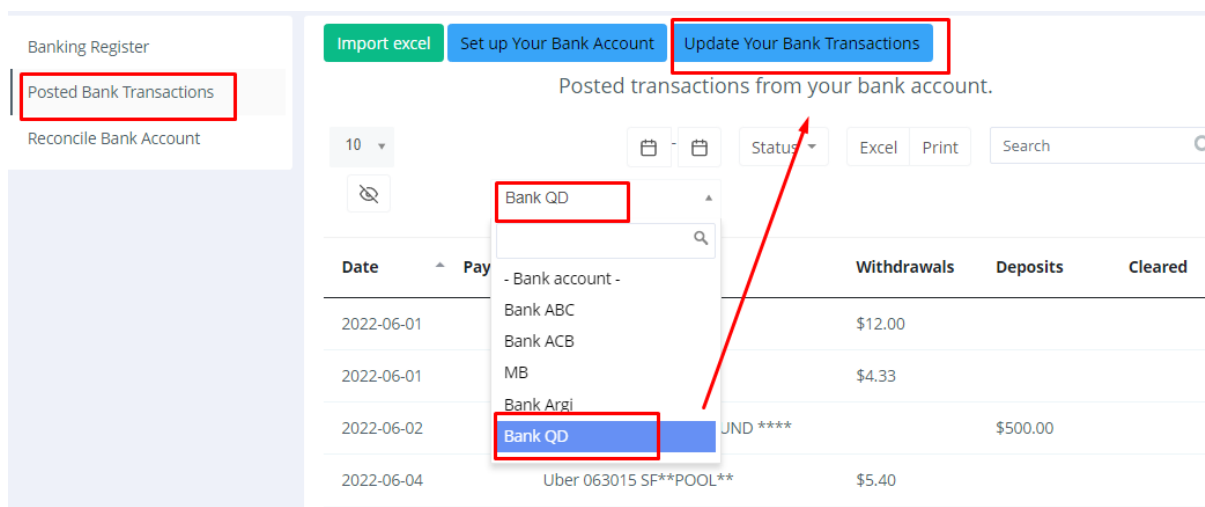

You are currently in Sandbox mode.

- Step 5: Continue to select valid data and log in to your account to be able to connect to the bank

2.2.3. Update Your Bank Transactions

- The function is used to update data to retrieve transactions from the bank. Once you have successfully set up your bank account, this function will be used.
- Step 1: Select the bank account to update transactions -> Select the function Update Your bank Transactions

- Step 2: The system will display the Update your bank transactions screen

Account Name: Plaid Checking Bank Argi Delete Verification;

Status : Verified

Last Refresh Date:

Import Transactions

Date from which to import transactions: Import New Bank Transactions

Up to 500 transactions can be imported at a time. It may take a few minutes to grab them all from your bank.

2.3. Reconcile Bank Account

- Select Accounting module -> Select Banking menu -> Select Reconcile Bank Account screen
- Screen used to reconcile transactions related to bank accounts
- Step 1: Select the Reconcile Bank Account screen -> Proceed to select account -> Then enter the Total Withdrawals for Period field, the Total Deposits for Period field, and the Ending date field -> Finally, select the Start reconciling function

The screenshot shows a web interface for a banking register. On the left, a sidebar contains three menu items: 'Banking Register', 'Posted Bank Transactions', and 'Reconcile Bank Account', which is highlighted with a red rectangle. The main content area has a header 'Open your statement and we'll get started.' followed by the question 'Which account do you want to reconcile?'. Below this is a dropdown menu labeled 'Account' with 'Bank Argi' selected. A section titled 'Add the following information' contains six input fields arranged in two rows and three columns. The first row includes 'Beginning balance' (0), 'Total Withdrawals for Period' (100), and 'Total Deposits for Period' (300). The second row includes 'Ending balance' (200.00) and 'Ending date' (2022-06-14). A blue 'Start reconciling' button is located at the bottom right of the form.

Add the following information		
Beginning balance	Total Withdrawals for Period	Total Deposits for Period
0	100	300
Ending balance	Ending date	
200.00	2022-06-14	

* Explanation:

- The Account field is used to select the bank account to be reconciled.
- The Beginning balance field will display the beginning balance
- Total Withdrawals for Period field: Total withdrawal amount of the bank account during the period
- Total Deposits for Period: Total deposit of the bank account in the period
- Ending balance: The ending balance after the end of the reconciliation. When entering the total withdrawal and deposit amounts, the ending balance will be automatically calculated.
- Ending date: The end date of the reconciliation
- Undo the last reconciliation function: Delete the previous reconciliation.
- Function Start reconciling: Start collation.
- Step 2: The system will display a screen containing manually entered transactions and transactions taken from the bank for comparison.

4. Transactions

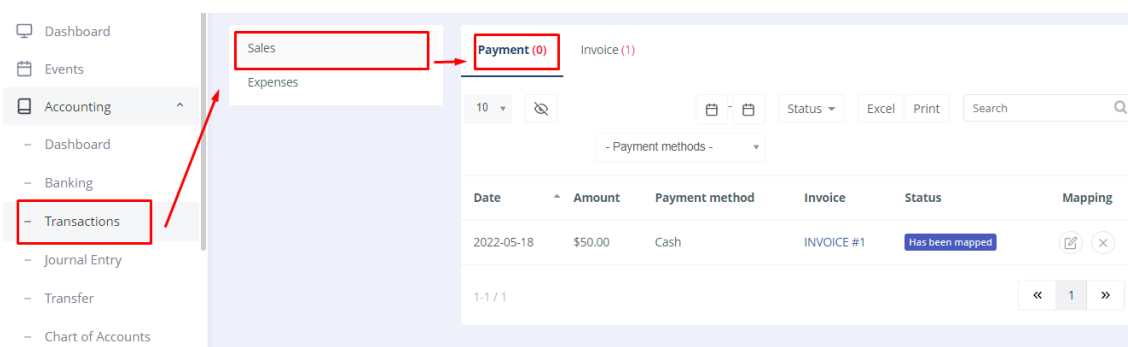

- Select module Accounting -> Select menu Transactions
- The screen is used to display transactions that are in the system and will be converted into accounting accounts
- This menu is for manually checking and mapping transactions to accounting accounts.
- Some objects that can be mapped from other modules are shown here (Payslips, Purchase, Inventory)

4.1. Sales

- Display transactions (Payment, Invoice) in the system and will be converted into accounting accounts.

4.1.1. Payment

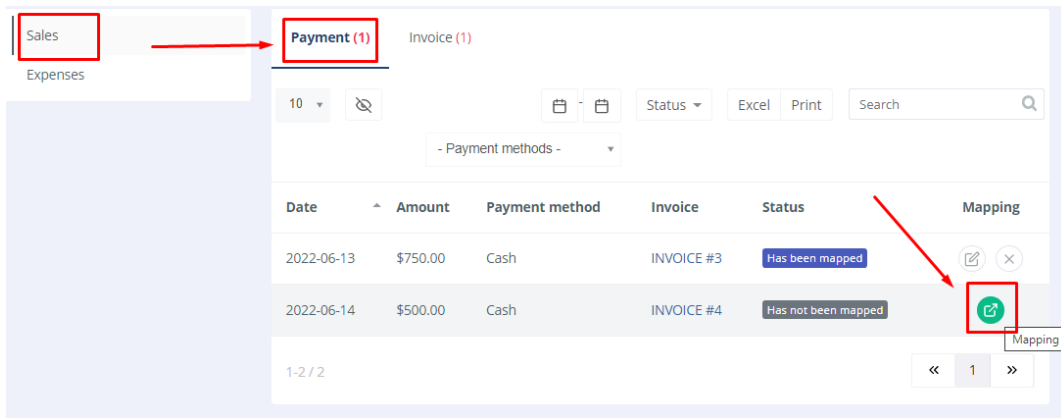

- The Payment screen is used to display the transactions that have been paid at the Invoice screen
- For data lines that have been paid and mapped to the accounting account, the status will be displayed as it has been mapped.
- For data lines that have been paid but have not been mapped to the accounting account, the status will be displayed as Has not been mapped

4.1.1.1. Manual Mapping Payment

If the Mapping setup screen in Settings does not allow automatic Payment mapping, then at this screen, proceed to map manually

- Step 1: Select the Transaction menu -> Select the Sales screen -> Select Payment -> Select the Mapping function corresponding to the transaction to be mapped to the accounting account

- Step 2: The system will display the Mapping screen -> Proceed to select the account to be mapping -> Select the Save function to save the data or select Close to cancel the operation and return to the main screen

Mapping ×

Invoice	INVOICE #4
Amount	500
Payment date	2022-06-14
Payment method	Cash

4.1.1.3. Delete Payment

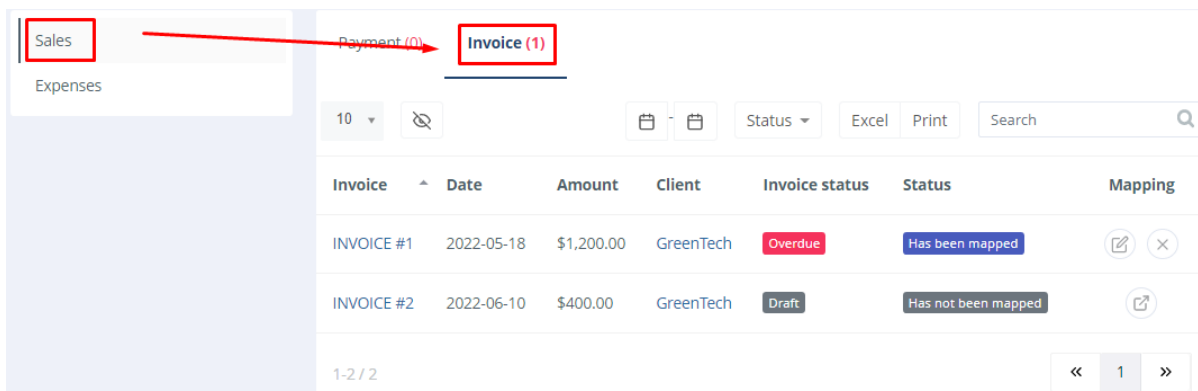

*Note:

- When deleting a payment, the corresponding invoice will be considered unpaid and can create another payment next time.
- Select the Transactions menu screen -> Select the Sale screen -> Select payment -> Proceed to select the Delete function corresponding to the Payment line to delete data

4.1.2. Invoice

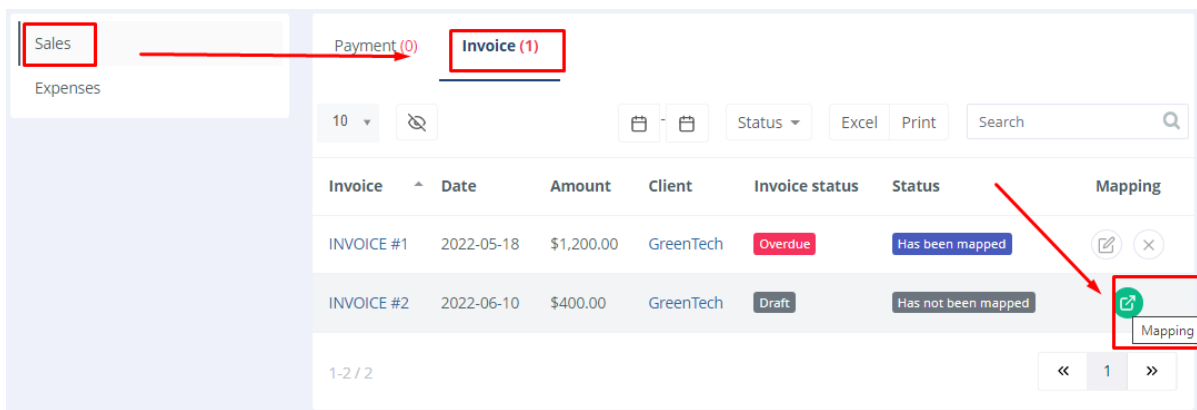

- Select Accounting module -> Select Transaction menu -> Select Sales screen -> Select Invoice
- screen is used to display the transactions in the system. The amount displayed on the invoice is used to show the number of transactions that have not been mapped to the accounting account
- For transaction lines that have been mapped to the accounting account, the status will be displayed as it has been mapped
- For transaction lines that have not been mapped to the accounting account, the status will be displayed as Has not been mapped

4.1.2.1. Manual mapping of invoice

If the Mapping setup screen in Settings does not allow automatic Invoice mapping, then at this screen, proceed to map manually.

- Step 1: Select the Transaction menu -> Select the Sales screen -> Select invoice -> Select the Mapping function corresponding to the transaction to be mapped to the accounting account

- Step 2: The system will display the Mapping screen -> Proceed to select the accounts to be mapped -> Select the Save function to save the data or select Close to cancel the operation and return to the main screen

4.2.3. Clear mapping data

*Note: only previously mapped data will display the Delete function

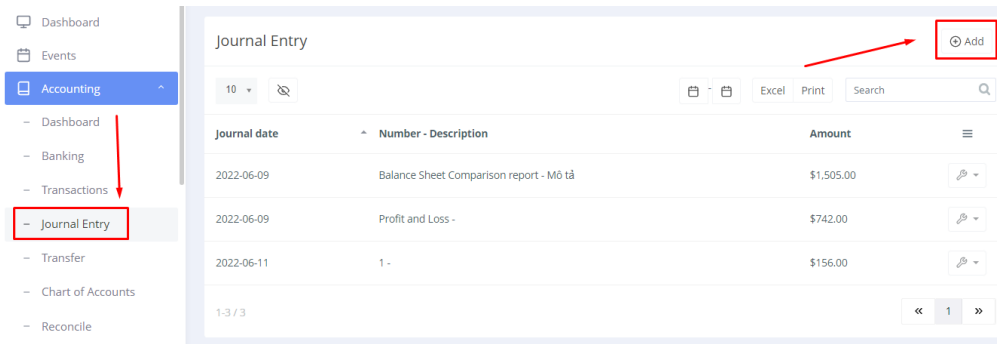

- If the data has been mapped to the accounting account, after deleting the data, the accounting account will return to the amount before it was mapped.
- Select the Transaction menu -> Select the Expenses screen -> Select the Delete function corresponding to the mapped transaction to be deleted

5. Journal Entry

Screen used to create and manage double entries without the need to go through a transaction

5.1. Create Journal Entry

- Step 1: Select the Accounting module -> Select the Journal Entry menu -> Select the Add function on the screen

- Step 2: The system will display the Journal Entry screen -> Proceed to select the accounting accounts and enter valid values into the list -> Select Save to save the operation just done or select Close to cancel the operation. And return to the main screen

Journal Entry

Journal date	Number
2022-06-13	1

	Account	Debit	Credit	Description
1	Travel expenses - selling expense - Expenses	200.00		
2	Supplies - Expenses		200.00	
3				
4				
5				
6				
7				
8				

* Explanation:

- Journal date field: The date of the double entries created below (The entries below will be created and displayed on reports with this date).
- Number: The number of this time (for display outside the list only)
- Must balance so that the total debit must be equal to the total Credit to be able to save.

Other general	\$500.00		
Meals and entertainment	\$500.00		
Total	\$3,500.00	\$3,500.00	

5.4. Delete Journal Entry

- Step 1: Select the Accounting module -> Select the Journal Entry menu -> Select the Delete function corresponding to the data line to be deleted

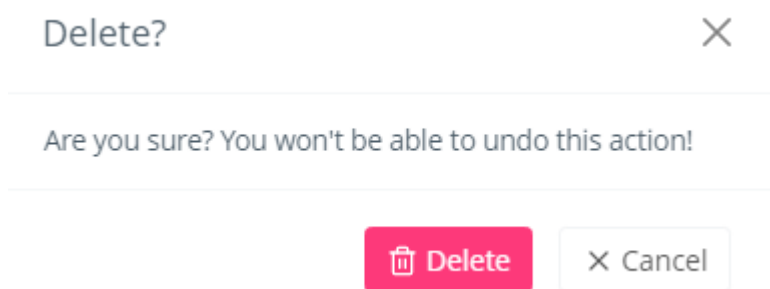

The screenshot shows the 'Journal Entry' interface. On the left is a sidebar with 'Accounting' selected, and 'Journal Entry' is highlighted with a red box. The main area displays a table with the following data:

Journal date	Number - Description	Amount
2022-06-09	Balance Sheet Comparison report - Mô tả	\$1,505.00
2022-06-09	Profit and Loss -	\$742.00
2022-06-11	1 -	\$156.00

A red box highlights the 'Delete' button in the top right corner of the table.

- Step 2: The system will display a confirmation screen. If you are sure you want to delete the data, select the Delete function or select Cancel to cancel the operation

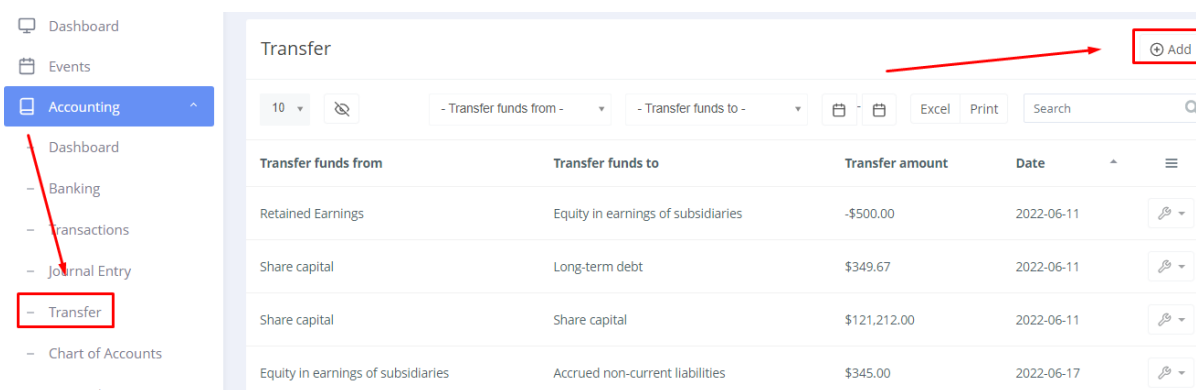

The screenshot shows a confirmation dialog titled 'Delete?'. It contains the text 'Are you sure? You won't be able to undo this action!'. At the bottom, there are two buttons: 'Delete' (with a trash icon) and 'Cancel' (with an 'X' icon).

6. transfer

- Screen used to create and manage the action of transferring balances of accounting accounts to each other
- The list will show the history of previous conversions

6.1. Create conversions

- Step 1: Select the Accounting module -> Select the Transfer menu -> Select the Add function on the screen

The screenshot shows the 'Transfer' interface. On the left is a sidebar with 'Accounting' selected, and 'Transfer' is highlighted with a red box. The main area displays a table with the following data:

Transfer funds from	Transfer funds to	Transfer amount	Date
Retained Earnings	Equity in earnings of subsidiaries	-\$500.00	2022-06-11
Share capital	Long-term debt	\$349.67	2022-06-11
Share capital	Share capital	\$121,212.00	2022-06-11
Equity in earnings of subsidiaries	Accrued non-current liabilities	\$345.00	2022-06-17

A red box highlights the 'Add' button in the top right corner of the table.

- Step 2: The system will display the Add Transfer screen -> Proceed to select accounting accounts and enter valid values -> Select Save to save the action just done or select Close to cancel the operation and return to the next step. About home screen

7. Reconcile

➤ Reconciliation will help us to check if there are any errors in the accounts.

Implementation steps:

- Step 1: select Reconcile menu -> from the Account dropdown, select the account you want to compare
- Step 2: Enter the Ending balance and Ending date → Then click Start reconciling.

The screenshot shows the 'Reconcile' form. Annotation 1 points to the 'Which account do you want to reconcile?' dropdown menu, which has 'Accrued holiday payable' selected. Annotation 2 points to the 'Ending balance' and 'Ending date' input fields, which contain '1,000' and '06.13.2022' respectively. A 'START RECONCILING' button is visible at the bottom right.

* Note:

- Account: Select the account to be compared
- Beginning balance: The opening balance will be the ending balance of the previous reconciliation.
- Ending balance: The ending balance.
- Ending date: The reconciliation date will be the date the account has the ending balance as declared.
- If the previous comparison has not been completed, when you come back, you can still continue to compare.

○ **1st position: Information of this comparison.**

- STATEMENT ENDING BALANCE: Closing balance
- BEGINNING BALANCE: Opening balance
- CLEARED BALANCE: The amount is calculated from the BEGINNING BALANCE - (PAYMENTS + DEPOSITS). DEPOSITS will be negative.
- PAYMENTS: Total amount received (Calculated from selected transactions below)
- DEPOSITS: Total Deposit (Calculated from selected transactions below)

○ **2nd place: Error compared to the reality of this comparison.**

- It will be calculated from the PAYMENTS and DEPOSITS of the selected transactions. Check for errors from the ending balance.
- If the error is zero, it means that this account is normal; no errors occurred. If the error is non-zero, then we have to review it and maybe make an adjustment to be able to complete this comparison.
 - Adjust the ending balance so that the error is zero. For example, if the error is 1000, we can increase or decrease the ending balance by 1000 to end the reconciliation.

To adjust the balance, press the button **Edit Info**

☒	2022-06-14	Journal Entry	-Split-			\$150.00	
☒	2022-06-13	Payment	Accounts Receivable (A/R)	GreenTech			\$750.00

- Calculate function: When selecting the transactions below, press this button to recalculate the above parameters to see if there is any difference.
 - Finish now function: Used to complete this reconciliation; if the balance is zero, then clicking will complete this reconciliation. If it is not balanced, it will allow making adjustments. When you select a date and create an adjustment, a double entry will be created to rebalance the amount to zero.
 - For example, if the error is: 1500, then a pair of double entries will be created so that the account is -1500, so the error is 0.
- ➔ Click FINISH NOW ➔to display the popup below -> proceed to select the adjustment date -> Then select the Add Adjustment and finish function

Hold on! Your difference isn't 0.00 yet.

You aren't ready to reconcile yet because your transactions in system don't match your statement. When they match, you'll have a difference of 0.00.

If you'd still like to proceed, confirm the following below, and then click Add adjustment and finish.

Adjustment date

2022-06-13

Close

Add adjustment and finish

○ **Wallet number 3: List of transactions to compare.**

- Transactions related to this account and within the reconciliation period will be displayed.
- Once the transactions have been reconciled, the next reconciliation will not show up again.

8. Budget

- The screen used to create financial plans or budgets is used to execute a business plan, usually within an intended period of time, the financial year of the business.

15 123 - Insurance - Disability						

- Step 2: The system displays a popup Creating a Budget -> Click Next button

You can create budgets to track income and expenses in Profit and Loss accounts and balances in Balance Sheet accounts.

In this interview you will:

1. Choose the type of budget and fiscal year.
2. Create the budget from prior year's data or from scratch.

- Step 3: The system displays a popup Year and Type

Fiscal Year for this budget

2022

Specify the type of accounts you want to use in this budget.

Choose Profit and Loss Accounts if you want to budget income of expenses. Choose Balance Sheet Accounts if you want to budget balances in asset or liability accounts.

☒ Profit and Loss Accounts

☐ Balance Sheet Accounts

*** Note:**

- The fiscal year for this budget: Year in which the budget will be created
- Specify the type of account you want to use within this budget.
- Profit and Loss Accounts: Select Profit and Loss Accounts if you want to budget your income from expenses.

You can create budgets to track income and expenses in Profit and Loss accounts and balances in Balance Sheet accounts.

☒ Create budget from scratch.

☐ Create budget from prior fiscal year transactions.

Previous

Done

- Create a budget from scratch: Create a budget from scratch.
 - Create a budget from prior fiscal year transactions: Create a budget from transactions in the previous fiscal year. That means will take the previous year's data to create for this year.
- Balance Sheet Accounts: Select Balance Sheet Accounts if you want to budget the balances in an asset or liability account.

Fiscal Year for this budget

2022

Specify the type of accounts you want to use in this budget.
Choose Profit and Loss Accounts if you want to budget income of expenses. Choose Balance Sheet Accounts if you want to budget balances in asset or liability accounts.

☐ Profit and Loss Accounts

☒ Balance Sheet Accounts

Previous Next

- You can only create one budget per year; if you already created a budget for this year, you can't create it anymore; you can only update it again.
- Step 4: Enter data for the budget, then press the button SAVE
