

"HR Payroll Management plugin for RISE CRM"

Created: 2022-09-14
By: greentech_solutions
Email: sales@gtssolution.vn

Thank you for choosing the HR Payroll Management plugin for RISE CRM. If you have any questions that are beyond the scope of this help file, please feel free to email us via the support item on Codecanyon.

A) Upload & activate the plugin

* Prior to starting the installation, please make sure that no `open_basedir` restriction is applied to your PHP configuration and that `shell_exec` is enabled. Whereas 95% of the hosting providers around got a proper config that includes the above guides, you may need to adjust your PHP configuration settings if your provider offers these settings disabled by default.

- Steps of Installation:

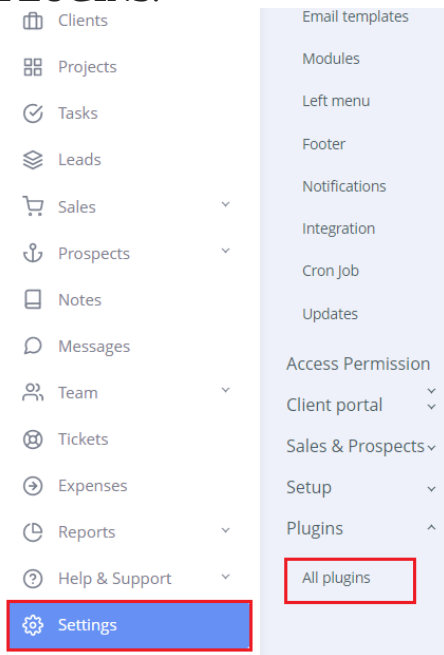

1. Extract your downloaded file content. You will notice a folder called "**documentation**" and a new zip file called "**upload.zip**". Since the "**documentation**" folder contains documentation files and helpful instructions that are not needed in your RISE CRM's installation, we will focus on the "**upload.zip**" file.

Name	Size	Packed	Type	Modified	CRC32
..			File folder		
documentation			File folder	09-May-20 7:2...	
upload.zip	89,929	83,101	WinRAR ZIP archive	09-May-20 8:0...	0F3E5E9E

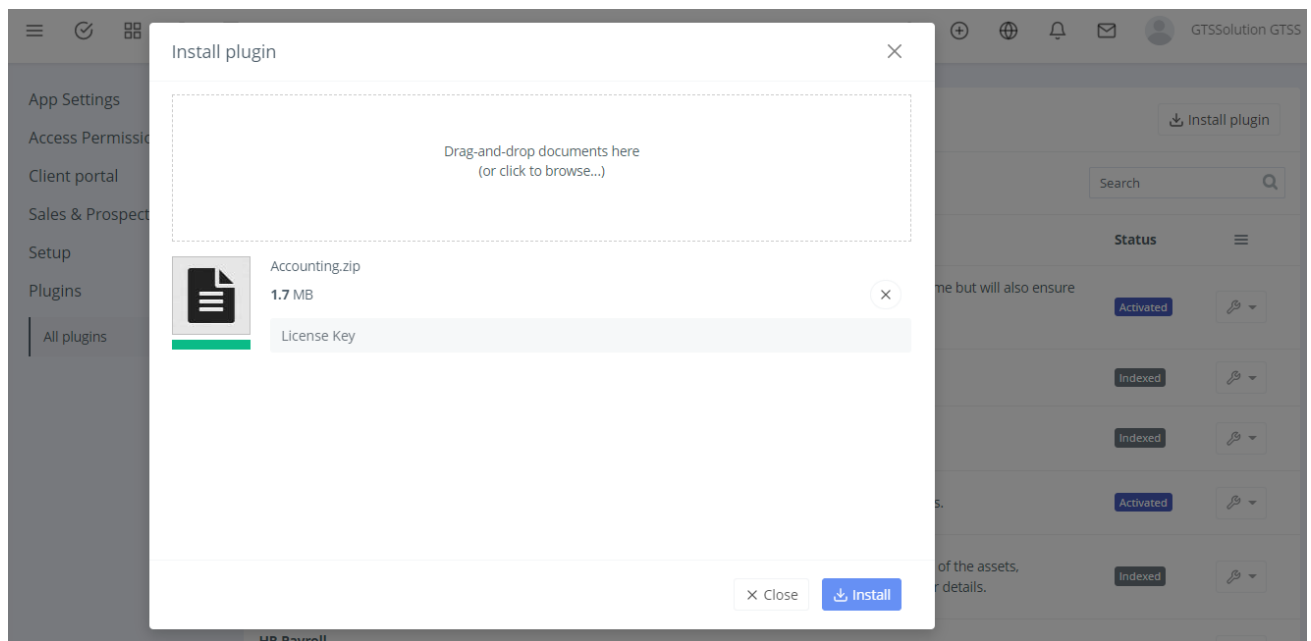

2. "**upload.zip**" contains the plugin files (in a plugin format) that you upload in RISE CRM's Plugin installation section.

Name	Size	Packed	Type	Modifi
..			File folder	
documentation			File folder	09-Mi
upload.zip	89,929	83,101	WinRAR ZIP archive	09-M

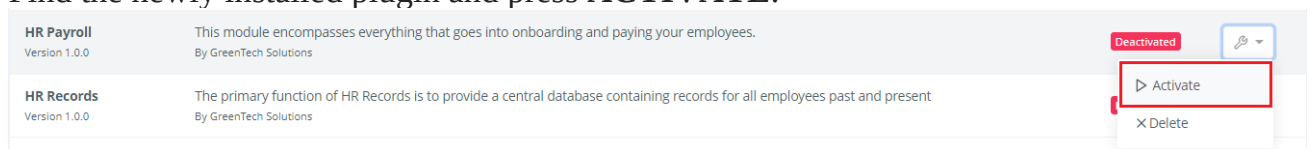

3. Go to your RISE CRM's Admin area and select the following menu item: **SETTINGS > PLUGINS.**

4. Select the extracted **upload.zip** at the Plugin installation selection prompt and press **INSTALL.**

5. Find the newly installed plugin and press **ACTIVATE.**

6. You will be told that the plugin is successfully activated.

B) How to use the HR Payroll Management plugin

HR Payroll module used to set and manage employee payroll information

1. Pre-installation

1.1. Income Tax Rates

- Income Tax Rates screen for entering and managing employees' personal income taxes
- Select the HR Payroll Module -> Select Income Tax Rates -> Proceed to enter the values for the fields -> Click Save to save the data just operated. The input data at this screen will be used for the Payslip screen when calculating personal income tax, specifically the Personal Income tax field. From there, the Personal Income tax value will be displayed on the Income taxes screen used to calculate the employee's personal income tax.

	From value	To value	Tax Rate %	Equivalent Value	Effective Rate %
1	0	10,275	10	1,027.5	10
2	10,276	41,775	12	4,807.5	11.51
3	41,776	89,075	22	15,213.5	17.08
4	89,076	170,050	24	34,647.5	20.37
5	170,051	215,950	32	49,335.5	22.85
6	215,951	539,900	35	162,718	30.14
7	539,901	1,000,000	37	332,955	33.3
8					
9					
10					

*Note: The formula will be calculated as follows:

For example, the corresponding columns From value, To value, Tax Rate, Equivalent Value, and Effective Rate are a b c d e, we have:

- $(b-a)*\%c+d1$ outputs field value d2
- $(d*100) / b$ output field value e
- For example, if we have an income of 7,890,000, the tax is calculated as follows: the first 5 million will be calculated in 5% = $5,000,000 * 5\% = 250,000$ and the remaining amount will be calculated in the second line 2 is $2,890,000*10\% = 289,000$. So the total amount payable in taxes is $250,000+289,000 = 539,000$

1.2. Income Tax Rebates

- The Income Tax Rebates screen is used to declare the corresponding personal income tax refund. The value must be fixed from low to high, for example, internship salary, basic salary, probationary salary, official salary ... *Note: Total 2 line = Total 1 + Value 2.
- Select the HR Payroll Module -> Select the Settings menu -> Select Income Tax Rebates -> Proceed to enter the values for the fields -> Click Save to save the data just operated. The input data of this screen will be used for the Employees menu screen.

	Code	Description	Value	Total
1	1	Primary Rebate	5,950,000	5,950,000
2	2	Secondary	6,000,000	11,950,000
3				
4				
5				
6				
7				
8				
9				
10				

*Explanation: The code field is used to enter the tax refund code. When the employee is allowed to refund, at the Employee -> screen, the Income rebate code enters the code of the refund; the employee will be refunded at the correct price. The value of the Total field corresponds to the tax refund id entered

1.3. Data integration

- The data integration screen is used to install data synchronization functions from the HR Records, Timesheets & Leave, and Commission module screen to get data used for the Employees, Attendance, and Commissions menu of the HR Payroll module
- Select the HR Payroll Module -> Select Data integration -> Proceed to enter the values for the fields -> Click Save to save the data just manipulated. This screen operation will affect the Earning list, Salary Deductions list, Payroll columns, Employees, Attendance, and Commissions screens.

*Note:

- In the HR records module integration field, if you check the data and save it, the system will synchronize the relevant data of an HR Records module to the HR Payroll module, such as:
 - Earning list screen uses salary type and allowance type data
 - Payroll columns screen using salary type and allowance type screen data

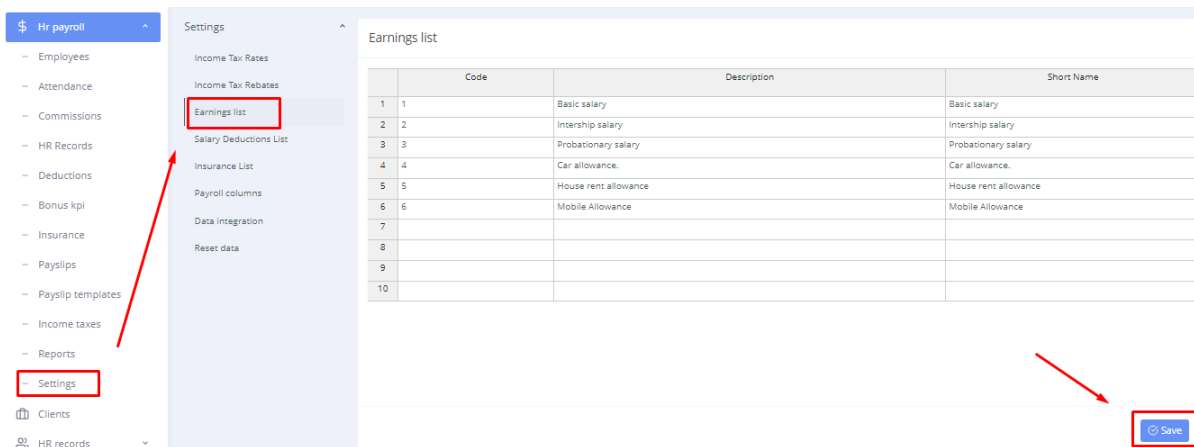

- The Employees screen uses the data of the Contracts screen
- At the Timesheets & Leave module integration field, if you select the data and save it, the system will synchronize the relevant data of the Timesheets & Leave module to the HR Payroll module as the Attendance menu screen will use the attendance and leave screen's data. Timesheets & leave module (this function will be updated in a later version)
- In the Commission module integration field, if you check the data and save it, the system will synchronize the relevant data of the Commission module to the HR Payroll module, such as the Commissions screen will use the data of the Commission receipt screen of the Commission module (this function will be updated on the later version)

1.4. List

- The Earning list screen is used to create a list of non-fixed income types of employees such as overtime, holiday bonuses, points allowance,...
- The data at this screen will be used for the Payroll columns screen

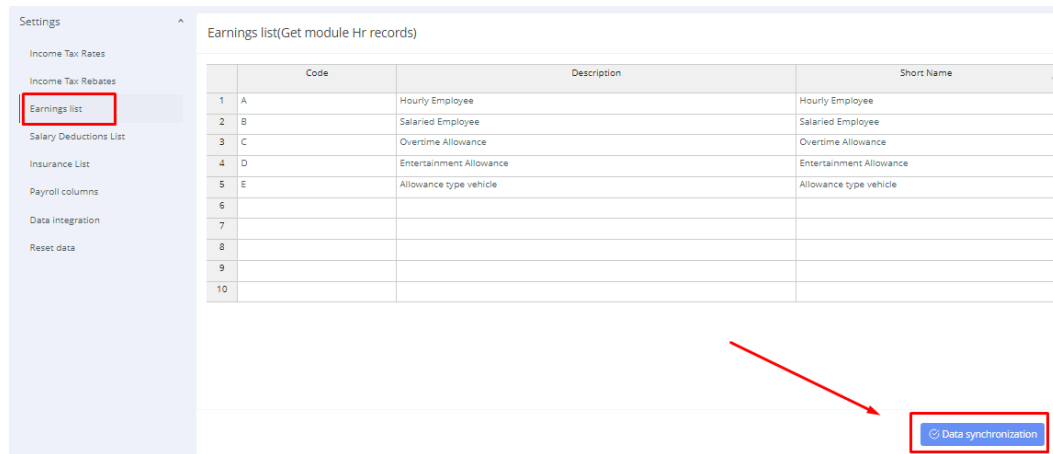

1.4.1. Asynchronous with HR Records module

- Select the HR Payroll Module -> Select Earning list -> Proceed to enter the values for the fields -> Click Save to save the data just manipulated. The input data of this screen will be used for the Salary Deductions list, Payroll columns, and Employees menu.

1.4.2. Sync with HR Records module

- At the Data integration screen -> check synchronization with HR Records module -> Save -> Then select the Earning list screen -> Select Data synchronization function -> When synced with HR Records module data, there is no need to enter values - The system automatically synchronizes salary type and Allowance type screen data to use for this screen.

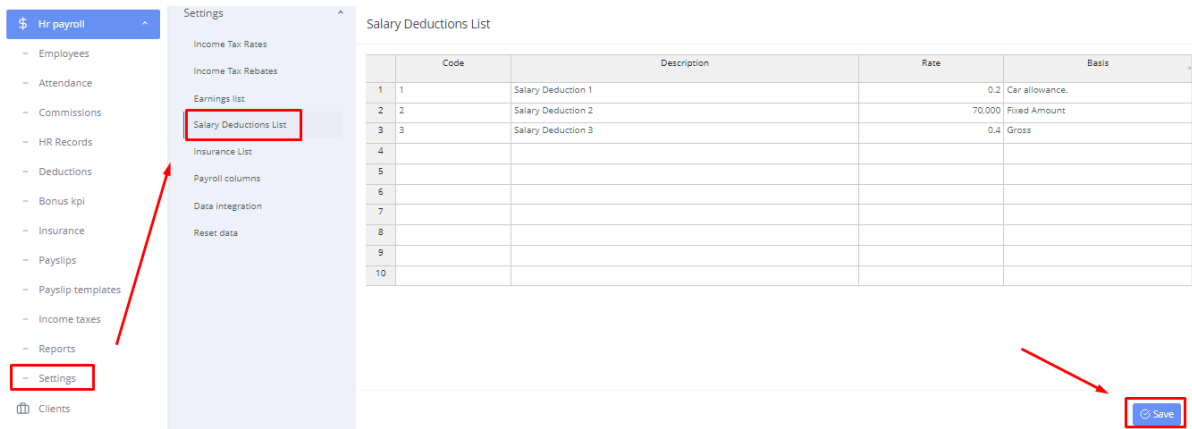

1.5. Salary Deductions List

- The Salary Deductions List screen is used to create and manage payroll deductions, such as lunch assistance, travel, and phone payments,...
- The data at this screen will be used for the Payroll columns screen
- Select the HR Payroll Module -> Select Salary Deduction List -> Proceed to enter the values for the fields -> Click Save to save the data just manipulated. The input data of this screen will be used for the Deductions menu screen.
- The Basis field data is taken from the Earnings list screen and has two additional values: Fixed amount and Gross. If the Basis field selects Gross, the Rate field must enter the value of %. If the remaining values are selected, the Rate field enters the corresponding amount.

***Example:** - If the Basis field selects data from the Earning list as Basic salary and the rate field enters 0.2, and at the Employee screen enter in the Basic salary field is 100,000, the Salary Deduction will be calculated as $100,000 \times 0.2$

- If the Basis field selects the Gross value, it will be calculated based on the value of the column "Gross Pay" - salary before tax - this is the default column declared in the "Payroll column": with the type being the formula - that is, the value will be calculated based on the formula entered by the user when the template => after the value Gross pay => to calculate salary deduction based on % rate

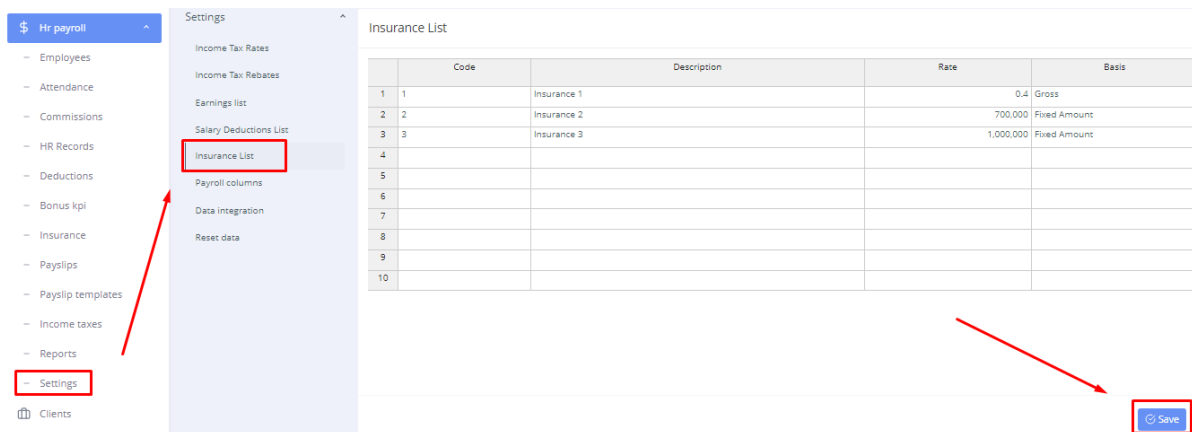

- If the Basis field selects the Amount value: then the rate will be considered as the corresponding amount

1.6. Insurance List

- The Insurance List screen is used to create and manage insurance types, such as social insurance, health insurance, and accident insurance,...
- This screen will be used for the Payroll columns screen.
- Select the HR Payroll Module -> Select settings menu -> Select Insurance List -> Proceed to enter the values for the fields -> Click Save to save the data just operated. The input data of this screen will be used for the Insurance menu screen.

***Note:** If the Basis field selects Gross, the Rate field must enter the value of %. If the Fixed amount value is matched, the Rate field enters the corresponding amount.

1.7. Payroll columns

- This screen is used to add columns used to calculate employee salaries – which is the input value for payslip templates when creating salary templates

***Note:** When editing the name of the data at the Earning list, Salary Deductions List, and Insurance screens, you must go to the Payroll column screen to update the column because the name of the column will not automatically update, so it may lead to confusion later.

1.7.1. Add a new Payroll column

- Step 1: Select the HR Payroll Module -> Select payroll columns -> ADD

The screenshot shows the 'Settings' menu on the left with 'Payroll columns' selected. The main area displays a table of payroll columns. A red arrow points to the 'Add' button in the top right corner.

Order	Column name	Taking method	Staff Created	Date Created	Actions
1	Staff ID	system	GTSSolution GTSS	2022-08-02 06:21	
2	Payslip Number	system	GTSSolution GTSS	2022-08-02 06:21	
3	Payment Run Date	system	GTSSolution GTSS	2022-08-02 06:21	
4	Employee Number	system	GTSSolution GTSS	2022-08-02 06:21	
5	Employee Name	system	GTSSolution GTSS	2022-08-02 06:21	
6	Department Name	system	GTSSolution GTSS	2022-08-02 06:21	
7	Standard Working Time	system	GTSSolution GTSS	2022-08-02 06:21	
8	Actual Working Time of Formal contract	system	GTSSolution GTSS	2022-08-02 06:21	
9	Actual Working Time of Probation contract	system	GTSSolution GTSS	2022-08-02 06:21	

- Step 2: The system will display the Screen New payroll column -> Proceed to enter the necessary values -> Select Save to save the operation just done or select Close to cancel the operation and close the screen.

The screenshot shows the 'New payroll column' form. The 'Taking method' field is set to '-'. The 'Column name' and 'Column key' fields are empty. The 'Description' field is a large text area. The 'Order display in payslip' field is set to '30'. At the bottom, there are 'Close' and 'Submit' buttons.

*Note: In the Taking method field, there will be three options:

- Get payroll column data from the system (data taken from earning list, Salary Deductions List, and Insurance screen) -> When creating a salary template in the Payslip templates screen, this payroll column field will update itself according to the data contained in the system.
*Note: Data taken from the Earning List screen will be displayed under CT1 and CT2, representing probationary contracts and official contracts; here, we will determine the value entered for employees in 1 month with both probationary and official contracts at the Employees screen

- Create payroll column data from the formula -> When creating a salary template in the Payslip templates screen, in this payroll column field, we must enter the formula to calculate the desired value.
- Create payroll column data from constant -> When creating a salary template in the Payslip templates screen, in this payroll column field, we must enter the constant to calculate the desired value.
- The Order display in the payslip field is used to enter the display order of the upcoming column. The smaller the sequence number, the closer the column will display to select when creating data in the Payslip templates screen

1.7.2. Edit Payroll column

- At the Payroll columns -> Select the function corresponding to the data stream to be edited 

Settings

1.8. Permissions

- To decentralize employees to operate on the HR payroll module, we proceed as follows:

- Step 1: SelectModule Settings -> Select the Access Permission screen -> Select Roles -> First actions for employees

- Step 2: Once you have created a group of common employees, proceed to decentralize the HR Payroll screen for employees -> Then move on to step 3

***Explanation:**

- View (Own) permissions are permissions that can only see information on the corresponding menu screen, with information on the screen only related to the screened employee, and the employee does not have the right to add, delete or edit the data contained on the screen. Note: When selecting the View (Own) permission, the View (Global) permission cannot be selected.
 - View (Global) permissions are permissions that can only see information on the corresponding screen, with information on the screen related to the screened employee and all other employees and employees who do not have the right to add, delete or edit the data contained on the screen. Note: When selecting the View (Global) permission, the View (Own) permission cannot be selected.
 - The Create permission allows employees to create new data on the screen without editing or deleting this data. Note: View (own or Global) permissions must be assigned so that employees can see the menu to proceed with other assigned permissions.
 - Edit permissions allow employees to edit the data information on the corresponding screen but not to create or delete data. Note: View (own or Global) permissions must be assigned so that employees can see the menu to proceed with other assigned permissions.
 - The Delete permission allows the employee to delete the data information on the corresponding screen but not to create new or edit the data. Note: View (own or Global) permissions must be assigned so that employees can see the menu to proceed with other assigned permissions.
- Step 3: Select the User roles -> Add roles screen for the corresponding common employees through the Edit function

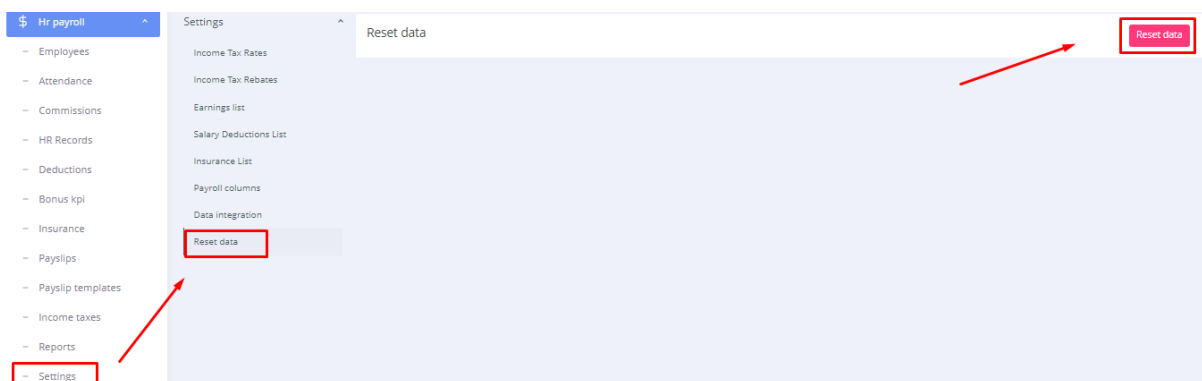

- Step 4: The system will display the Edit user role screen -> select the previously decentralized role in step 2 -> Then select Save to save the operation

1.9. Reset data

- Go to the HR payroll module -> Settings -> Select Reset data. When selecting the Reset Data feature, all data of the Employees, Attendance, Commissions, Deductions, Bonus KPI, Insurance, Payslips templates, Payslip, and Income taxes screen will be deleted entirely.

2. External links

- Go to the HR Payroll Module -> Select the Employees menu.
- This screen is used to manage employee earnings.
- The data at this screen will be used to calculate for the Payslip menu screen when creating payroll
- Income rebate code data is taken from the Income Tax Rebates screen in Settings -> the Income rebate code field enters the tax refund code, and the employee will be refunded the value of the Total field corresponding to the tax refund code entered
- The Default Income tax rate column data displays the value A, which represents personal income tax calculation. Otherwise, income tax can be removed dropped the value of the field.
- Other display columns will be taken from the Earnings list screen in Settings.

*Note: The Copy function used to copy the previous month's data is displayed again for the current month. For example, the screen displays the list of 4 months, and using the copy function, the system will copy the data of 3 months displayed for the month. 4. If three months don't have data, April won't show anything either.

- Data, when synchronous or asynchronous, will be saved in 2 separate parts, so customers do not need to worry when integrating will lose the data entered

Employee number	Employee name	Job Title	Department name	Income tax number	Residential address	Income rebate code	Income tax rate	Bank name	Account number	Basic salary (CT1)	Internship salary (CT1)
EX000003	test0 gnosolution	IT Department	IT Department			A	A			0	0
EX000006	test0 gnosolution	Promotion Decisions	Promotion Decisions			A	A			0	0
EX000026	test0 gnosolution	Product Decisions	Product Decisions			A	A			0	0
EX000007	test0 gnosolution	Promotion Decisions	Promotion Decisions			A	A			0	0
EX000027	Lam Lam	IT 1	IT 1			A	A			0	0
EX000001	GTSSolution GTSS	Director				A	A			0	0

2.1. Asynchronous with HR Records module

When out of sync with the HR Records module, there are two ways to enter data into the screen:

2.1.1. Manually enter values

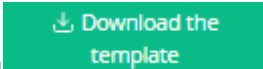

- Proceed to point to the cell to edit the data -> Enter the value -> Select the Save function to save the data just added.

2.1.2. Import values

- Step 1: At the Employees -> screen, select the Import Excel feature

Employee number	Employee name	Job Title	Department name	Income tax number	Residential address	Income rebate code	Income tax rate	Bank name	Account number	Basic salary (CT1)	Internship salary (CT1)
EX000003	test0 gnosolution	IT Department	IT Department			A	A			0	0
EX000006	test0 gnosolution	Promotion Decisions	Promotion Decisions			A	A			0	0
EX000026	test0 gnosolution	Product Decisions	Product Decisions			A	A			0	0
EX000007	test0 gnosolution	Promotion Decisions	Promotion Decisions			A	A			0	0
EX000027	Lam Lam	IT 1	IT 1			A	A			0	0
EX000001	GTSSolution GTSS	Director				A	A			0	0

- Step 2: The system will export the import screen -> Proceed to select The month you want to

import data (1) and select Create File (2) -> Select function  to download the excel file to your computer.

Employee imported

(1) → Tháng Tám 2022 (2) Create file

- 1. It is necessary to use templates generated from the system to enter data into the system
- 2. Do not add any columns or rows to the file downloaded from the system. The values of columns with symbol CT1, CT2, Job title, Residential address, Income rebate code, Income tax rate can only be updated (the column is blue), do not update the orange column value, the values of CT1 and CT2 entered must be numeric
- 3. Effective date of CT1, Expiration date of CT1, Effective date of CT2, Expiration date of CT2: enter with the format "yyyy-mm-dd": eg: 2020-12-30

Employee number	Employee name	Job Title	Department name	Income tax number	Residential address	Income rebate code	Income tax rate
-	-	-	-	-	-	-	-

Select the excel file

Chọn tệp Không có tệp nào được chọn

X Back Import

***Note :**

- Need to import the correct data sample downloaded from the system
 - Do not add any columns or rows to the uploaded file for Import to the system, and do not delete any columns
 - Only updated values with symbols CT1, CT2, Job title, Residential address, Income rebate code, Income tax rate,... - columns in blue
 - Don't update values for orange columns
 - CT1 and CT2 values must enter numeric values
 - Dates must be properly formatted as "yyyy-mm-dd."
- Step 3: After editing the data directly on the excel file -> Proceed to select Choose file to upload the file to the system (3) - > select Import (4) to push the data into the system. If the Import fails, proceed to step 4.

Employee Imported

Tháng Tám 2022 Download the template

- 1. It is necessary to use templates generated from the system to enter data into the system
- 2. Do not add any columns or rows to the file downloaded from the system. The values of columns with symbol CT1, CT2, Job title, Residential address, Income rebate code, Income tax rate can only be updated (the column is blue), do not update the orange column value, the values of CT1 and CT2 entered must be numeric
- 3. Effective date of CT1, Expiration date of CT1, Effective date of CT2, Expiration date of CT2: enter with the format "yyyy-mm-dd": eg: 2020-12-30

Employee number	Employee name	Job Title	Department name	Income tax number	Residential address	Income rebate code	Income tax rate
-	-	-	-	-	-	-	-

Select the excel file

Chọn tệp Không có tệp nào được chọn (3)

X Back Import (4)

- Step 4: If the file has a system error, it will display the message -> Select Download Error File -> Proceed to fix the error -> Choose file -> Import.

2.2. Sync with HR Records module

- When allowing synchronization with the HR Records module, the system will display the Data Synchronization function used to synchronize data with the HR records module (set up sync at the Data screen). section 1.3)
- When synchronizing with the HR Records module, the system will automatically update the equivalent values in the HR Records module such as contract time, salary, ... and only take contracts with Valid status, and the date in the contract must also be a valid date. If the

employee has two contracts, the system will understand that the contract with a smaller date is a CT1 contract, and the contract with a larger duration will be a contract CT2

- After synchronizing, we can also edit and import data as usual but note that we must select the Save function for the data to be saved to the system and used for the next steps

Employees management

Month: Tháng Năm 2022 Department: Role: Staff:

7	SC00004	GTSSolution GTSS	IT Analyst	Director			A	A			0

Update Data synchronization Copy Import Excel

3. Attendance

- Go to the HR Payroll Module -> Select attendance menu.
- This screen is used to manage employees' working time.
- The data at this screen will be used to calculate for the Payslip menu screen when creating payroll
- Actual working time of probation contract (hours) column :> Mapping with the Employee screen to see which contract the employee was under that month -> After selecting the calculation function, the system will calculate the working hours of the probationary contract to display in this column. The value of this field will be used for the Probation contract field of the Payslip screen
- Actual working time of formal contract (hours) column: > Mapping with employee screen to see which contract the employee is in the month That -> After selecting the calculation function, the system will calculate the working hours of the official contract to display in this column. The value of this field will be used for the Formal contract field of the Payslip screen
- Paid leave time (hours) column data is used to enter the number of hours that employees are not working but are still entitled to pay. The value of this field will be used for the Paid Leave Time field of the Payslip screen
- Unpaid leave time (hours) column data is used to enter the number of hours an employee is not working and is not entitled to pay. The value of this field will be used for the Unpaid Leave Time field of the Payslip screen

- Standard working time of the month column data is the standard field of hours for the month in which employees work. This column data is synchronized from the Standard working time of the month value of the Data integration screen in Settings. The value of this column will be used for the Standard working time field of the Payslip screen
- ⇒ From all of the above fields, the system will calculate the working hours of employees for the month. For example, if you work 184 hours/month, employees will receive 10,000,000, but if employees only work 180 hours, employees will only receive 9,782,608

Select the excel file

Chọn tệp Không có tệp nào được chọn (3)

X Back Import (4)

- Step 4: If the file has an error, the system will display the message -> Select Download Error File -> Proceed to fix the error -> Choose file -> Import.

3.2. Sync with Timesheet & leave the module

- Temporarily in this version, there is no sync function with the Timesheet & leave module.
- When allowing synchronization with the Timesheet & Leave module, the system will display the Data synchronization function used to synchronize data with the Timesheet & Leave module.
- When synchronizing with the Timesheet & Leave module, the system will automatically update the equivalent values included in the Timesheet & Leave module, such as the number of working hours in the day, paid holidays, unpaid holidays,...
- After synchronizing, we can also edit, save, calculate and import data as usual.

4. External links

- Go to the HR Payroll Module -> Select the Commissions menu. This screen is used to manage the amount of commission received by employees.
- The data at this screen will be used to calculate for the Payslip menu screen when creating payroll. Specifically, the Commission amount field will be used for the Commission Amount column in the payroll

4.2. Synchronization with Commission module

- Temporarily in this version, there is no synchronous function with the Commission module.
- When allowing synchronization with the Commission module, the system will display the Data synchronization function used to synchronize data with the Commission module.
- When synchronized with the Commission module, the system will automatically update the equivalent values in the Commission module, such as the total amount of employee commission achieved in that month.
- After synchronizing, we can also edit, save and import data as usual.

* Note: To synchronize the data from the Commission screen, the customer must pay the invoice -> Then we must pay the commission of the staff through that invoice at the Commission receipt -> screen, From which the new system takes the commission data that the salesperson is entitled to display in the commission screen of hr payroll. The steps are as follows:

- Step 1: Go to the Commission receipt screen of the Commission module -> Select New
- Step 2: Select invoices with commissions of the corresponding staff (note: staff invoices must be selected) -> Select Save
- Step 3: Go to the Commission menu of HR payroll and synchronize again

Update

8. Payslips templates

- This screen-generated payroll template will be used for the Payslips menu screen when creating payroll for employees.

8.1. Create a new salary template

- Step 1: Go to the HR Payroll module -> Select the Payslip Templates menu -> Select the ADD function included in the screen

- Step 2: The system will display the Screen New payslip template -> Proceed to enter the necessary values -> select Submit to save the operation just done or select Close to close the screen and cancel the operation.

New payslip template ×

Only one sample payslip template is allowed per employee. If the employee falls within other the payslip template, exclude the employee from the the payslip template through the "Except for staffs" field.

* Template name

* Select the column displayed in the pay slip

Nothing selected

Department name: All

Role: All

Staff: All

Except for staffs: Nothing selected

× Close Submit

***Note :**

- An employee can only be included in one salary sample, and if you have selected employee A for salary form 1, you cannot choose employee A for salary form 2.
- Except for staff, if selecting the corresponding employee, the employee will not be able to apply this salary template when making payroll but must create another salary template and re-select, this employee so that he can do payroll.
- The data displayed in the Select column displayed in the pay slip field is taken from the Payroll columns screen in Settings.
- The data in the Department name field is taken from the Org Chart screen of the HR Records module. If only the Department field data is selected but not the employee name, the system will be interpreted as taking all employees included in the corresponding department to salary sampling

- The data in the Role field is taken from the User Roles screen of Access Permission in Settings
 - The data in the Staff and Except for staff fields is taken from the HR Records screen of the HR Records module.
- Step 3: After you have created a new salary template -> The system will display the salary template screen of the selected excel fields in the Select the column displayed in the Payslip ->. Proceed to edit the fields that use formulas to calculate (formula fields). -> Click Save to save the formula just entered.

10. Income taxes

*Note: The Income taxes column will pull data from the Personal Income Tax column of the employee's closed paycheck for display. To get the Personal Income Tax column value, we must enter a formula for the Taxable salary column in the paycheck. From the value of the Taxable salary column, the system will automatically calculate the Personal Income Tax column according to the formula created in Settings

- This screen is used to display the employee's personal income tax amount for the month and year.
- If at the Employees screen we enter the Income tax rate field with a value of A corresponding to the condition of calculating personal income tax for employees, the system will take the corresponding monthly salary (column "Taxable salary" in the payroll) closed by the employee in the Payslips screen and calculate it according to the formula set at the Income Tax Rates screen in Settings.
- After calculation, the employee's personal income tax amount will be displayed in the Income taxes column.

- The tax for year column is the amount of personal income tax for the year of the respective employee (total months)

*Note: The columns in the list will be taken from the employee's payroll, and the system will display the total columns of the categories; if these columns do without entering a formula to calculate the total value, the system will now be 0.0

11.2. Income summary report

- Go to the HR Payroll module -> Select the Reports menu -> select Income summary report.
The income summary report will show an overview of the employee's income by month. The data will take the Netpay column value in the closed payroll to display
- We can perform data searches by time, department, and employee name,...

The screenshot shows the HR Payroll module interface. On the left, a sidebar menu lists various options: Employees, Attendance, Commissions, Deductions, Bonus kpi, Insurance, Payslips, Payslip templates, Income taxes, Reports (highlighted with a red box), Settings, Clients, HR records, Purchase, and Projects. The main area displays the 'Reports' section with a 'Charts based report' dropdown set to 'All Time'. Under 'Reports', 'Income summary report' is highlighted with a red box. Below this, the 'Income summary report' section shows filters for 'Department name' (All) and 'Staff' (All). A table displays payroll data with columns for Pay slip number, Employee name, Department name, and months from January to December, along with an 'Average Income' column. The table contains several rows of data for different employees and departments.

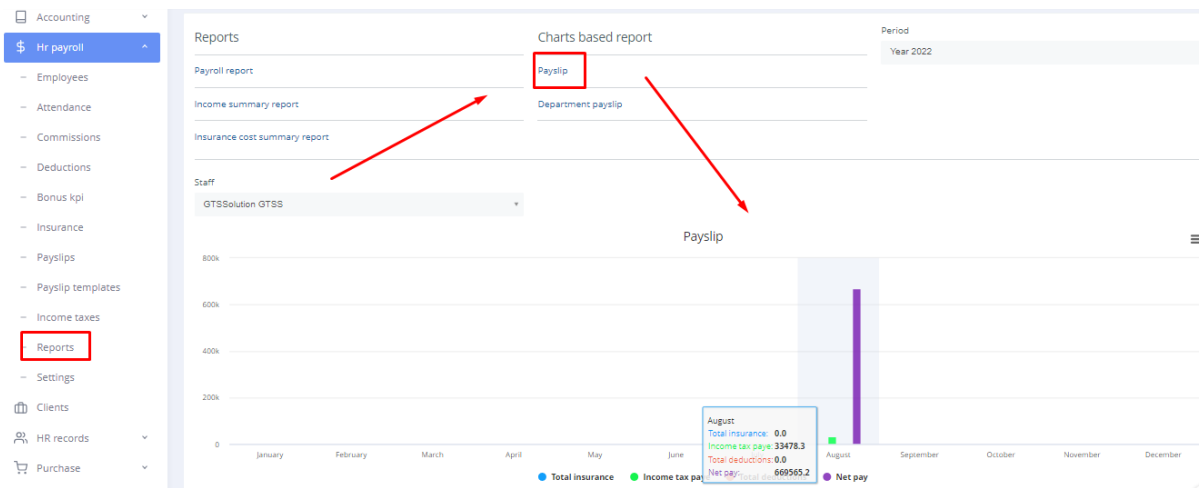

11.3. Insurance cost summary report

- Go to the HR Payroll module -> Select the Reports menu -> select Insurance cost summary report. The insurance cost summary report will display an overview of the department's insurance costs according to the selected time
- We can perform data searches by time, department, and employee name,...

The screenshot shows the 'Insurance cost summary report' section. The sidebar menu is the same as in the previous screenshot, with 'Reports' highlighted. In the main area, 'Insurance cost summary report' is highlighted with a red box. Below this, the 'Insurance cost summary report' section shows filters for 'Department name' (All) and 'Staff' (All). A table displays insurance costs with columns for 'Department name' and 'Total Insurance'. The table contains several rows of data for different departments, including sales, Market Research, IT, IT 1, IT Department, Promotion Decisions, Product Decisions, Marketing Department, Accounting department, Human Resource Department, Director, Purchase Department, and Sales Department.

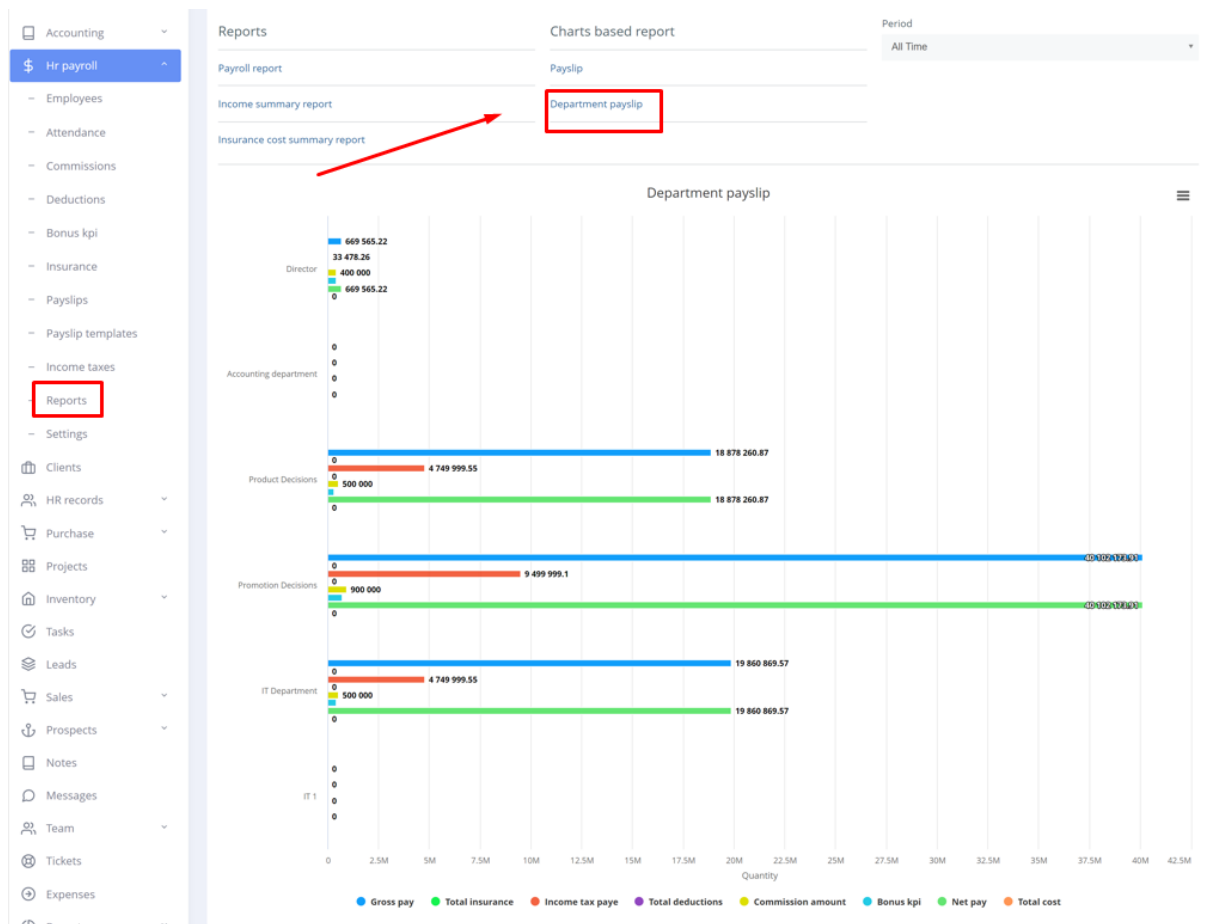

11.4. Payslip

- Go to the HR Payroll module -> Select the Reports menu -> select Payslip. Payslip will display an overview chart of employee salaries for the year.
- We can perform data searches by time, employee name,...

11.5. Department payslip

- Go to the HR Payroll module -> Select the Reports menu, -> select Department Payslip. Department Payslip will display an overview chart of the salaries of the departments.
- We can do data searches over time.
