

"Inventory Management plugin for RISE CRM"

Created: 2022-09-14
By: greentech_solutions
Email: sales@gtssolution.vn

Thank you for choosing Inventory Management plugin for RISE CRM. If you have any questions that are beyond the scope of this help file, please feel free to email us via the support item on Codecanyon.

A) Upload & activate the plugin

* Prior to starting the installation, please make sure that no `open_basedir` restriction is applied to your PHP configuration and that `shell_exec` is enabled. Whereas 95% of the hosting providers around got a proper config that includes the above guides, you may need to adjust your PHP configuration settings if your provider offers these settings disabled by default.

- Steps of Installation:

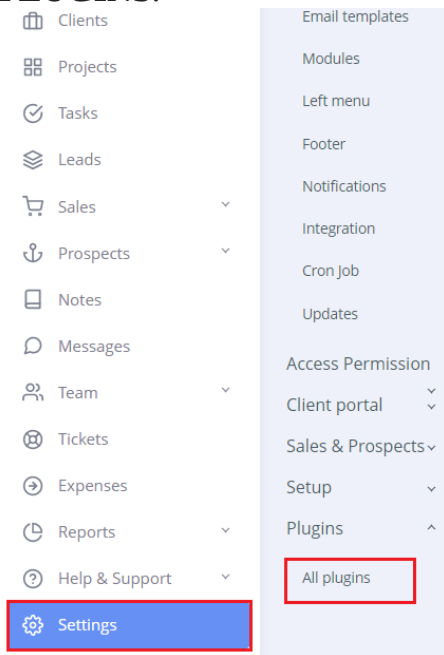

1. Extract your downloaded file content. You will notice a folder called "**documentation**" and a new zip file called "**upload.zip**". Since the "**documentation**" folder contains documentation files and helpful instructions that are not needed in your RISE CRM's installation, we will focus on the "**upload.zip**" file.

Name	Size	Packed	Type	Modified	CRC32
..			File folder		
documentation			File folder	09-May-20 7:2...	
upload.zip	89,929	83,101	WinRAR ZIP archive	09-May-20 8:0...	0F3E5E9E

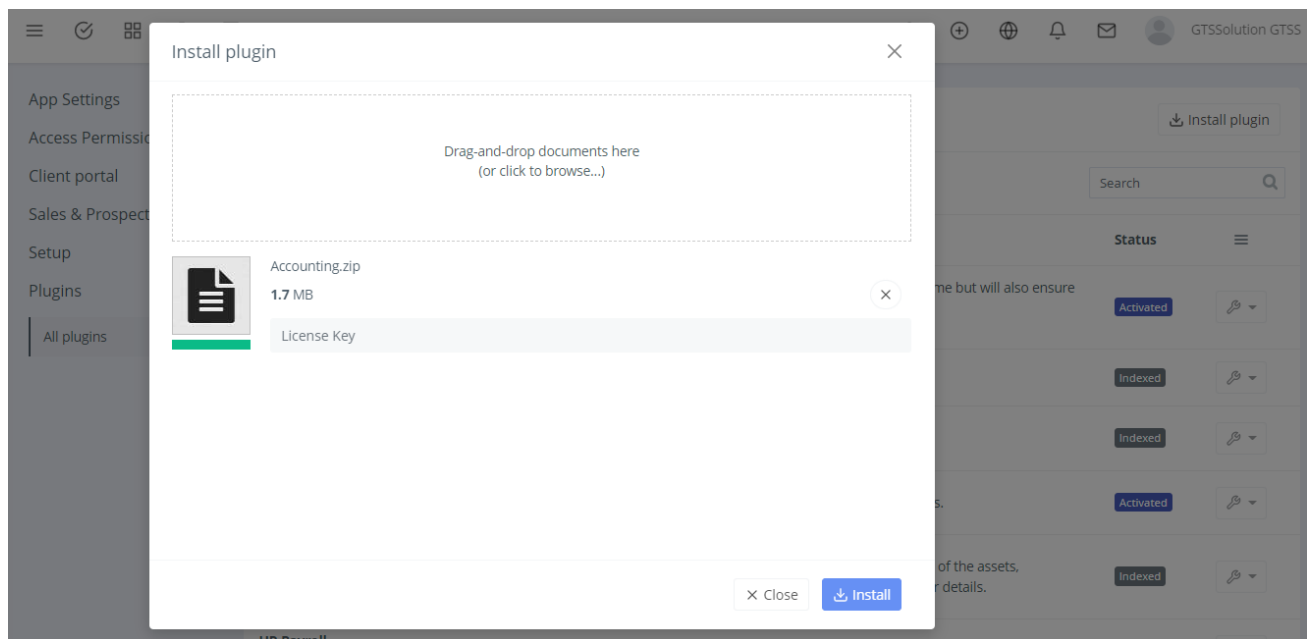

2. "**upload.zip**" contains the plugin files (in a plugin format) that you upload in RISE CRM's Plugin installation section.

Name	Size	Packed	Type	Modifi
..			File folder	
documentation			File folder	09-Mi
upload.zip	89,929	83,101	WinRAR ZIP archive	09-M

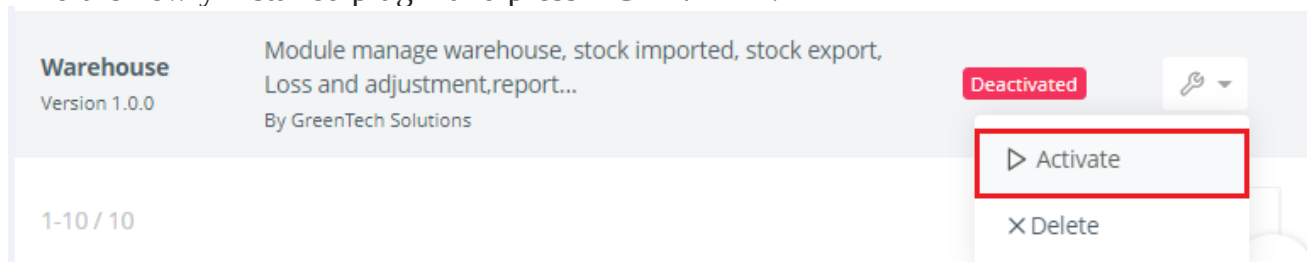

- Go to your RISE CRM's Admin area and select the following menu item: **SETTINGS > PLUGINS**.

- Select the extracted **upload.zip** at the Plugin installation selection prompt and press **INSTALL**.

- Find the newly installed plugin and press **ACTIVATE**.

- You will be told that the plugin is successfully activated.

B) How to use the Inventory Management plugin

1.Settings

The screens in the settings menu are used to set the input data used for the inventory

1.1. General

a) Items

- Step 1: Select the inventory module -> select the settings menu -> select the general menu
- Step 2: Proceed to select the necessary data, and the system will automatically update according to the change.

* explanation of the meaning of the fields:

- Default profit rate (%): used to enter the default profit rate. This data is displayed by default in the default profit rate (%) field in the add new item

- Rate is used to select the formula to calculate the item's selling price. When creating an item, the selling price will be calculated according to the selected formula. There are two options:

- + *Calculate the selling price using the cost and profit rate:* when you choose this option, the selling price will be calculated by the formula $\text{selling price} = \text{purchase price} * (1 + \text{profit ratio})$

Example: if you enter default profit rate (%) = 13, purchase price=100

⇒ $\text{selling price} = 100 * (1 + 0.13) = 113$

- + *Calculate the selling price using the selling price and profit rate:* when you select this option, the selling price will be calculated according to the formula $\text{selling price} = \text{purchase price} / (1 - \text{profit ratio})$

Example: if you enter ex: default profit rate (%) = 13, purchase price = 100

⇒ $\text{selling price} = 100 / (1 - 0.13) = 114.94$

- + Rounding rule: there are two rules used to round the selling price (rate)

- Fractional portion (number of digits rounded: rounding the decimal part

Example :

Fractional portion (Number of digits rounded)	2
Integer portion (Number of digits rounded)	0

S - .

Configure as shown above, if rate = 155.7471, it will round ≈ 155.75

- Integer portion (number of digits rounded): rounding the integer part

Example:

Fractional portion (Number of digits rounded)	0
Integer portion (Number of digits rounded)	1

Configure as shown above; if rate = 154.59, it will round ≈ 160

- **Barcode:**

+use SKU code as a barcode: if this option is checked, then after saving the item, the commodity barcode field will automatically copy the data from the SKU code field.

Conversely, if this option is not checked, then when adding an item, entering data in the SKU code field will not change the commodity barcode

*note: the data of previously created items will not be changed when there is an update. This configuration.

+ display a short description below the printed barcode: if you enable this setting, when printing a barcode, the short description will be displayed, and only the first 30 characters of the short description will be displayed.

- Update the "do not update inventory numbers" attribute in the product to "uncheck." : when you press the update button, the items with the "do not update inventory quantity" check will be deselected.

b) **Receiving & delivery**

The data set in the receiving & delivery tab will be used for the stock in and out screens.

General	
☒ Allow delete of Inventory receipt voucher or Inventory delivery voucher (after approval)	
Export method	
FIFO (First In, First Out) ▼	
Goods receipt	
☒ Create an inventory receipt when the Purchase Order is approved	Select the warehouse to auto-receive inventory generated from purchase orders
☒ It is mandatory to select a Purchase order when entering an Inventory receipt	WH001_Warehouse 1 ▼
Inventory delivery voucher	
☒ When cancelling an Invoice, automatically delete the corresponding Inventory delivery generated from the Invoice	
☒ When unchecked, the invoice cancellation and the Inventory delivery will be automatically generated	
☒ It is mandatory to select a Purchase order when entering an Inventory delivery	

* explanation of the meaning of the fields:

- **General:**

Allow deletion of inventory receipt voucher or inventory delivery voucher (after approval): if you enable this setting, the approved status will display the option to allow input/output vouchers with approved status. Delete => after deletion, reduces or increase the amount of inventory and delete both the history in the inventory history menu and in the item details in the import/export slip.

Otherwise, if this setting is unchecked, the inventory receipts with the approved status will not be deleted.

- Export method: FIFO (first in, first out): the items that are in stock first will be selected to be shipped out first.

- Good receipt

+ Create an inventory receipt when the purchase order is approved: if you enable this setting, you must select a warehouse in the *select warehouse to auto-receive inventory generated from the purchase order* field when the purchase order is approved and imported into the selected warehouse.

If you enable the *creation of an inventory receipt when the purchase order is approved*, but if the warehouse is not selected, the warehouse receipt is not automatically generated.

Or if you don't enable *create an inventory receipt when the purchase order is approved* but select the warehouse in the *select the warehouse to auto-receive inventory generated from purchase orders*, no receipt will be automatically generated later when the purchase order is approved.

+ It is mandatory to select a purchase order when entering an inventory

+ receipt: if you enable this setting, when creating an inventory receipt, the purchase order field is a required field to enter

c) Receiving-exporting return order

The screenshot shows a web form titled "Receiving-Exporting return order". It has three main sections:

- The warehouse receives return order:** A dropdown menu with the selected value "RE-EX_Warehouse Re-Ex".
- Fee for return order:** A text input field containing the value "15".
- Return policies information:** A text area containing the following text: "Return policy FAQ
Is a return a refund?
No. A return is when a customer sends an item back to your store or warehouse. They usually have to return an item before they get a refund. A refund means giving the customer all or some of their money back for a purchased item."

A blue "Submit" button is located at the bottom right of the form.

* explain the meaning of the fields:

- The warehouse receives a return order: selects the warehouse for the items from the approved return order.
- Fee for return order: when returning an order, there will be a fee; the fee will be calculated based on x percent of the total order value.
- Return policies information: allows editing the content of the return policy (used to display in the return and export receipts)

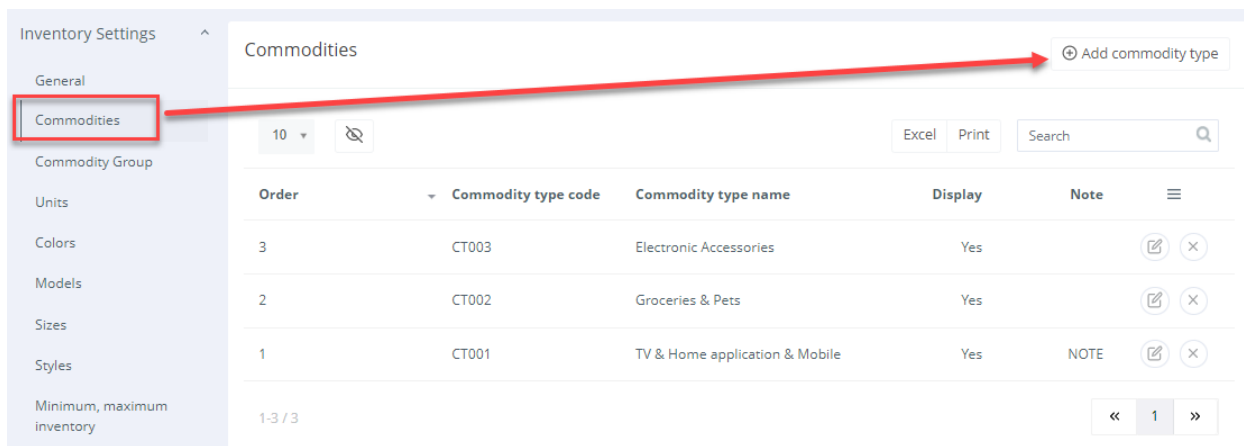

1.2. Commodity type

The data set used in the item creation screen

1.2.1. Add commodity type

Step 1. Select the settings menu -> select the commodities menu

Step 2. Click the add commodity type button

*explanation:

- The commodity group code field to enter the code for the commodity group
- The commodity group name field to enter the commodity group name
- The order field to enter the order in which this commodity group displays in the Combobox commodity group. The commodity group with smaller order will be displayed at the top of the commodity group list in the Combobox commodity group
- Display field if the checkbox is checked, this commodity group will show up in the Combobox commodity group
- The note field is used to enter notes (if any).

1.3.2. Edit commodity group

Step 1. Select settings -> select menu commodity group-> select the edit function corresponding to the data line to be edited

The screenshot shows the 'Inventory Settings' application. On the left is a sidebar menu with options: Inventory receiving voucher, Inventory delivery voucher, Packing lists, Internal delivery note, Loss & adjustment, Receiving-Exporting return order, Warehouses, Inventory history, Report, and Settings (highlighted with a red box). The main area is titled 'Commodity Group' and contains a table with columns: Order, Commodity group code, Commodity group name, Display, and Note. The table lists three groups: Order 5 (CG003, Machine), Order 4 (CG002, Cooling & Air Treatment), and Order 3 (CG001, TV & Video Devices & Mobile). Each row has edit and delete icons. A red arrow points from the 'Settings' menu item to the 'Commodity Group' section header, and another red arrow points from the 'Commodity Group' section header to the table. At the bottom right of the table, there are pagination controls showing '1' of 3 items.

Step 2. The system will display the corresponding edit data screen -> proceed to enter necessary data to edit -> select submit to save the action you just made or select close to cancel the operation and return to the main screen

Edit commodity group

	Commodity group code	Commodity group name	Order	Display	Note

*explanation:

- Unit code field to enter the code for the unit of measure
- Unit name field to enter the unit name
- The unit field symbol is used to enter the symbol of the unit of measure.
- The order field is used to enter the order in which this unit displays in the unit Combobox. Units with smaller orders will display at the top of the unit list in the Combobox unit
- Display field if the checkbox is checked, this unit will display in the Combobox unit
- The note field is used to enter notes (if any).

1.4.2. Edit unit

Step 1. Select settings -> select menu units-> select edit function corresponding to the data line to be edited

The screenshot shows the 'Inventory Settings' menu on the left. The 'Units' option is highlighted with a red box. A red arrow points from this box to the 'Unit type' screen on the right. The 'Unit type' screen displays a table of units with columns: Order, Unit code, Unit name, Unit symbol, Display, and Note. The first row shows Order 10, Unit code U002, Unit name Ton, Unit symbol TON, and Display No. The second row shows Order 5, Unit code U004, Unit name Meter, Unit symbol METER, and Display Yes. The third row shows Order 4, Unit code U003, Unit name Unit, Unit symbol UNIT, and Display Yes. The fourth row shows Order 2, Unit code U001, Unit name Kilogram, Unit symbol KILOGRAM, and Display Yes. The table is paginated 1-4 / 4.

Step 2. The system will display the corresponding edit data screen -> enter the data needed to edit -> select submit to save the action you just performed or select close to cancel the operation and return to the main screen

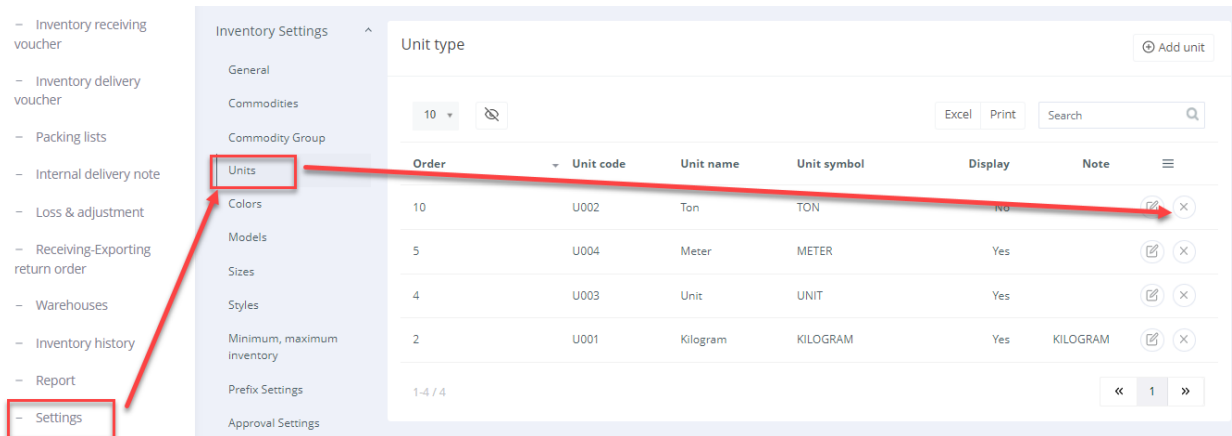

The 'Edit unit' screen displays a table with the following data:

	Unit code	Unit name	Unit symbol	Order	Display	Note
1	U002	Ton	TON	2	☐	

At the bottom right, there are two buttons: 'Close' (with a close icon) and 'Save' (with a checkmark icon).

1.4.3. Delete unit

- Select settings -> select menu units-> select delete function corresponding to the data line to be deleted

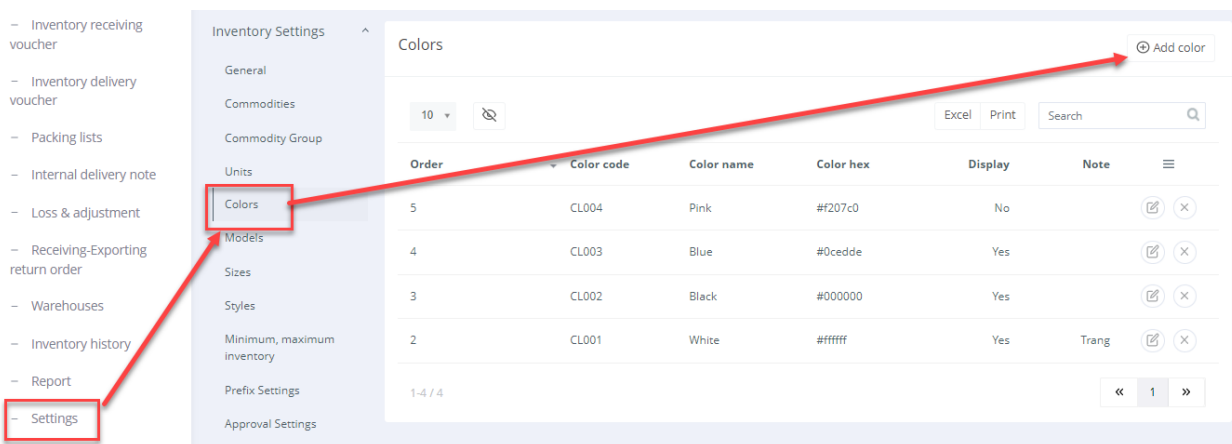

1.5.Colors

The data set used in the item creation screen

1.5.1. Add color

Step 1. Select menu settings -> select menu colors

Step 2. Click the add color button

Step 3. Enter valid data in the fields. Then select save to save the action you just made or select close to cancel the operation and return to the previous screen

*explanation:

- Model code field to enter the code for the model
- Model name field to enter the model name
- Order field to enter the order that this unit displays in the model combobox. Models with smaller orders will display at the top of the model list in the combobox model
- Display field if the checkbox is checked, this model will display in the combobox model
- The note field is used to enter notes (if any).

1.6.2. Edit model

Step 1. Select settings -> select menu model -> select edit function corresponding to the data line to be edited

The screenshot shows the 'Inventory' application interface. On the left, a navigation menu has 'Settings' highlighted. In the center, the 'Inventory Settings' panel is open, showing a list of settings categories. The 'Models' category is selected. On the right, the 'Models' table is displayed. The table has columns: Order, Model code, Model name, Display, Note, and an action column. A red arrow points from the 'Settings' menu item to the 'Models' category in the settings panel. Another red arrow points from the 'Models' table to the 'Edit' icon in the action column of the first row (Order 10).

Order	Model code	Model name	Display	Note	Action
10	MD0010	Model 10	No		[Edit] [X]
9	MD009	Model 9	No		[Edit] [X]
8	MD008	Model 8	Yes		[Edit] [X]
7	MD007	Model 7	Yes		[Edit] [X]
6	MD006	Model 6	Yes		[Edit] [X]
5	MD005	Model 5	Yes		[Edit] [X]
4	MD004	Model 4	Yes		[Edit] [X]
3	MD003	Model 3	Yes		[Edit] [X]

Step 2. The system will display the corresponding edit data screen -> enter the data. Data needed to edit -> select submit to save the action you just performed or select close to cancel the operation and return to the main screen

Edit model
×

	Model code	Model name	Order	Display	Note
1	MD0010	Model 10	10	☐	

× Close
Save

1.6.3. Delete model

➤ Select settings -> select menu models-> select delete function corresponding to the data line to be deleted

The screenshot shows the 'Inventory Settings' interface. On the left, the 'Settings' menu item is highlighted. In the 'Inventory Settings' panel, the 'Models' sub-menu is selected. The main area displays a table of models. A red arrow points from the 'Models' sub-menu to the delete icon (X) in the first row of the table.

Order	Model code	Model name	Display	Note
10	MD0010	Model 10	No	
9	MD009	Model 9	No	
8	MD008	Model 8	Yes	
7	MD007	Model 7	Yes	
6	MD006	Model 6	Yes	
5	MD005	Model 5	Yes	
4	MD004	Model 4	Yes	
3	MD003	Model 3	Yes	

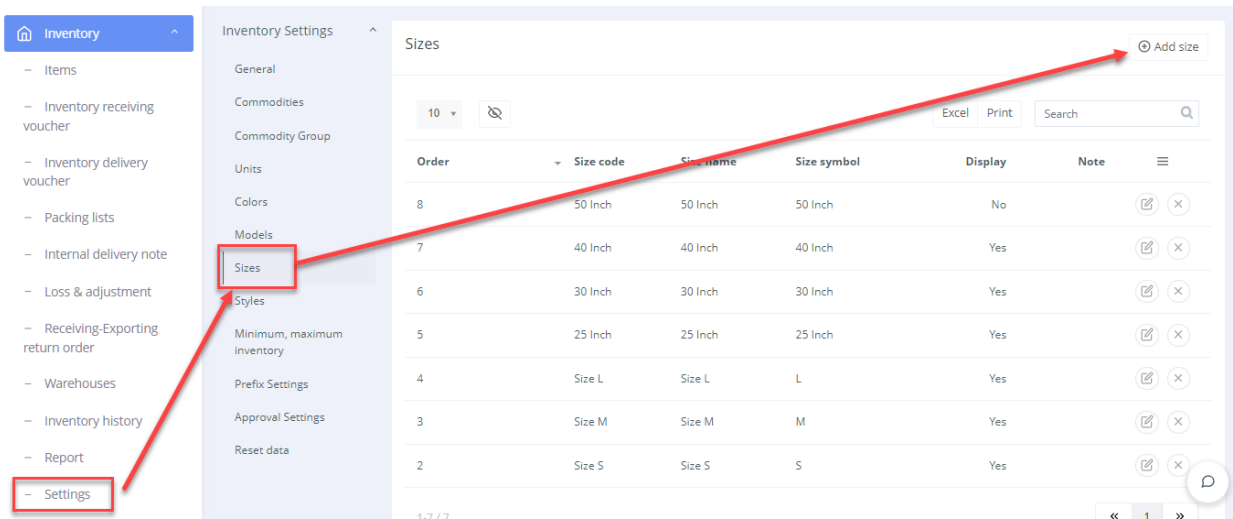

1.7.Sizes

The data set used in the item creation screen

1.7.1. Add size

Step 1. Select menu settings -> select menu sizes

Step 2. Click the add size button

Step 3. Enter valid data in the columns. Then select save to save the operation you just made or select close to cancel the operation and return to the previous screen

Add size
×

	Size code	Size name	Size symbol	Order	Display	Note

1.9. Minimum, maximum inventory

Used to set the minimum and maximum inventory value of each item in stock.

The table below shows a list of all items currently in the system.

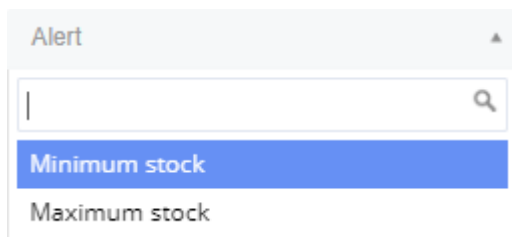

➤ Enter the minimum and maximum inventory value of each item, respectively, in the column minimum inventory value and maximum inventory qty-> then select save to save the action you just performed
*explanation:

Field commodity code and commodity name, and SKU code will get the data from the items screen.

⇒ minimum inventory value and maximum inventory qty will be displayed in the minimum stock and maximum stock columns in the item management screen.

Minimum inventory value: used to filter products with inventory count equal to or less than minimum stock quantity (according to minimum stock quantity in the item menu) and display inventory alerts on the manage item screen (red for items with a minimum inventory count)

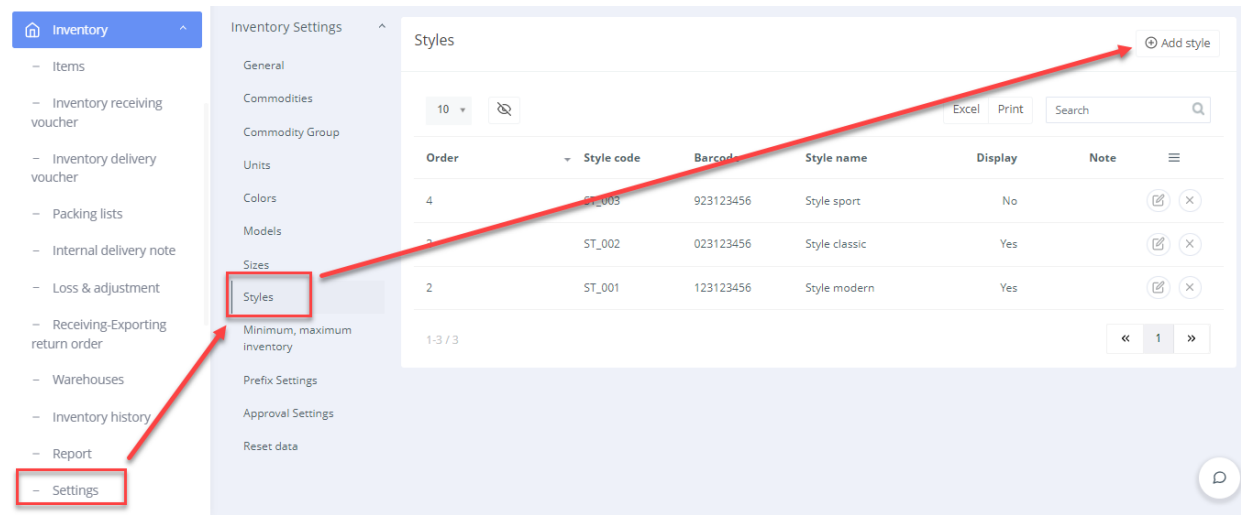

Maximum inventory: used to filter products with an inventory count equal to or more than the item quantity maximum inventory (according to maximum inventory in the item menu)

1.10.Prefix settings

Used to update the prefix configuration for the inventory received the note, inventory delivery note, internal delivery note, packing list, receiving-exporting return screens order, SKU

Step 1. Select the settings menu -> select the prefix settings menu

Step 2. Enter valid data in the fields. Then select save to save the action you just made

*explanation:

- The inventory received number prefix field is used to enter the prefix displayed in the delivery docket number field in the warehouse entry
- The field next inventory received number: set this field to 1 if you want to start from scratch, and it will automatically increment by one once an inventory is generated.
- The inventory delivery number prefix field is used to enter the prefix shown in the inventory delivery voucher code field in the delivery slip
- Next inventory delivery number field: set this field to 1 if you want to start from the beginning, and it will automatically increase by 1 unit later when a release note is created.
- The internal delivery number prefix field is used to enter the prefix displayed in the internal delivery note number field in the internal delivery note
- Next internal delivery number field: set this field to 1 if you want to start from the beginning, and it will automatically increase by one position after an internal transfer slip is created.
- The packing list number prefix field is used to enter the prefix shown in the packing list number field in the packing slip
- Next packing list number field: set this field to 1 if you want to start from scratch, and it will automatically increase by 1 unit after a packing slip is generated.
- Receipt return order prefix field: used to enter the default prefix that will be displayed in the order return number field in the return entry form
- Next receipt return order field: set this field to 1 if you want to start from scratch, and it will automatically increment by 1 unit after a pay slip is generated.
- Delivery return purchasing goods prefix field: used to enter the default prefix that will appear in the order return number field in the return slip
- Next delivery return purchasing goods: set this field to 1 if you want to start from scratch, and it will automatically increments by 1 unit after a pay slip is generated.
- SKU prefix field: is automatically added before the SKU code after the item is saved successfully.

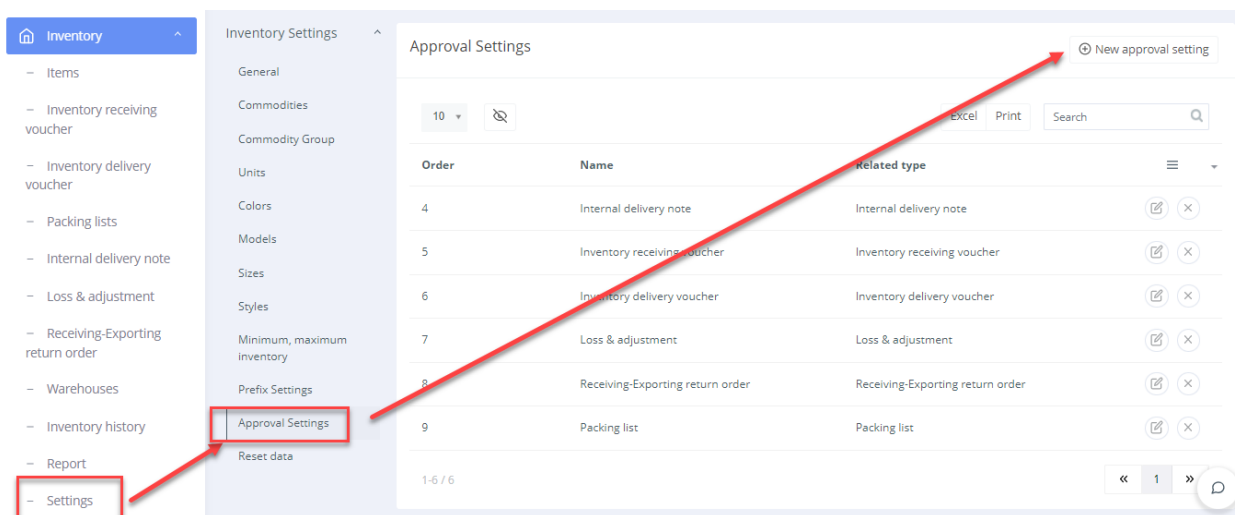

1.11.Approval settings

The approval settings screen is used to create and manage the browsing process of the inventory receiving voucher, inventory delivery voucher, packing list, internal delivery note, loss & adjustment, order return function

Note: the approval flow of the created vouchers was previously unaffected by the approval setting update.

1.11.1. Add a new process

- Step 1: select menu settings -> select approval settings -> select new approval setting

- Step 2: the system will display new approval settings screen -> enter required data -> then click save to save, repeat the action, or select close to close the screen and cancel the action you just performed.

*explanation:

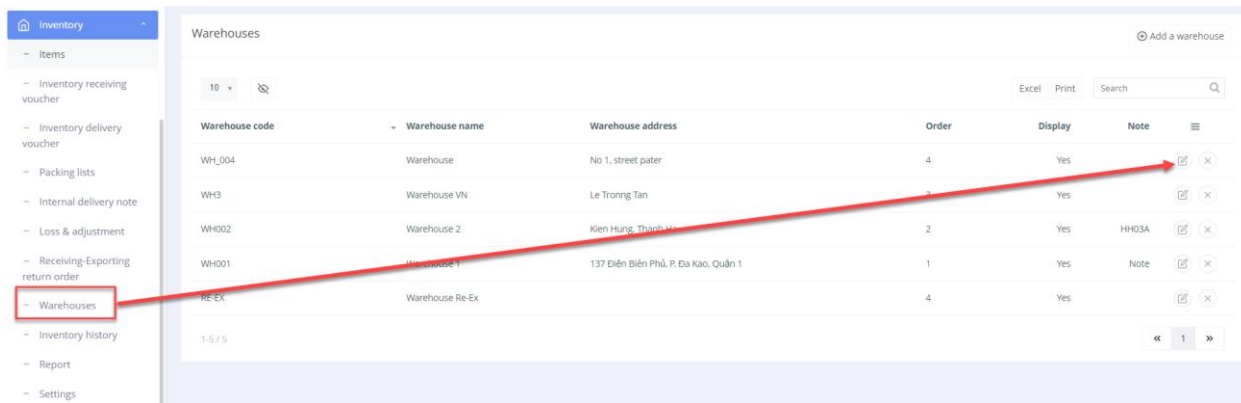

- Warehouse code field to enter the code for the warehouse
- The warehouse name field is used to enter the name of the warehouse
- Order field to enter the order in which this inventory is displayed in the warehouse combobox.

Warehouses with smaller orders will display at the top of the warehouse list in the warehouse combobox.

- The warehouse address field is used to enter the warehouse address.
- The city field is used to enter the name of the city where the warehouse is located
- . Enter the name of the state where the warehouse is located
- The postal code field is used to enter the postal code
- The country field is used to enter the name of the country where the warehouse is located
- The note field is used to enter the note (if any).
- If the display field is checked, the warehouse will be displayed in combobox warehouse

2.2. Edit the warehouse

Step 1. Select the warehouses' menu -> select the edit function corresponding to the data line to be edited

Warehouse code	Warehouse name	Warehouse address	Order	Display	Note	
WH_004	Warehouse	No 1, street pater	4	Yes		[Edit] [Delete]
WH3	Warehouse VN	Le Trong Tan	1	Yes		[Edit] [Delete]
WH002	Warehouse 2	Kien Hung, Thanh Ho	2	Yes	HH03A	[Edit] [Delete]
WH001	Warehouse 1	137 Điện Biên Phủ, P. Đa Kao, Quận 1	1	Yes	Note	[Edit] [Delete]
RE-EX	Warehouse Re-Ex		4	Yes		[Edit] [Delete]

Step 2. The system will display the corresponding edit data screen -> enter the necessary data to edit -> select submit to save the action you just made or select close to cancel the operation and return to the main screen

Edit commodity type

Warehouse code

*explanation:

★ Tab general info:

- The parent item field displays previously created items in the items screen of the inventory module. If the parent item is selected, the fields commodity name, SKU name, commodities, unit, purchase price, rate, and tax are automatically filled in according to the data of the parent item.
- The commodity code field is used to enter the item's code
- The commodity name field is used to enter the item name
- The commodity barcode field is used to enter the item's code
- The SKU code field is used to enter the sku's code in case the user does not enter the SKU code; after saving the item, the SKU code will automatically generate.
- The SKU name field is used to enter the name of the SKU. The description field is used to enter a short description of the item
- The commodities field displays a list of commodity types with display status on the commodities setting screen
- The units field displays a list of units with display status on the units setting screen

- The commodity group field displays the list commodity group has display status in the commodity group setting screen
- The default profit rate (%) field automatically fills in the preconfigured value in the general setting screen.
- The tax1 and tax two fields get data from the taxes screen of the core.

- The purchase price field is used to enter the purchase price of the item
- The rate field is used to enter the selling price of the item. In case the user enters the default profit rate (%) and purchase price first, the rate field will be automatically calculated according to the formula selected in general settings
- Upload the image used to upload the item's image. Allows adding multiple images at the same time. The first uploaded image will be selected as the item's representative image. In the item details screen, all the added shapes will be displayed at the top right

APPLE_iPhone 13 Pro Max 128GB, 256GB			Warehouse 1	100	Unit	1,130	1,000		

* explain the meaning of tabs

- Stock inventory tab: shows product inventory by warehouse, lot number, and expiry date.
- Expiry date tab: shows items that have expired if the time of warehousing for a product entering expiry date
- Transaction history tab: record the history of warehousing, warehousing, warehouse transfer, inventory adjustment, display of early-term inventory, and end-of-term inventory through each transaction.
- Variants tab: shows product variants

3.4. Item editing

- Step 1: at the items -> screen, select the corresponding line that wants to edit -> select edit function

The screenshot shows the 'Inventory' section of the application. In the left sidebar, the 'Items' link is highlighted with a red box. A red arrow points from this box to the 'Edit' button in the actions column of the 'Commodity List' table. The table displays a list of commodities with columns for Images, Commodity Code, Commodity Name, Sku Code, Group name, Warehouse name, Inventory, Unit name, Rate, Purchase Price, Tax 1, Tax 2, Status, Minimum stock, Maximum stock, and Price after tax. The table includes rows for Samsung S21, iPhone 12, iPhone 13 Pro, and Laptop. The 'Edit' button is located in the actions column for the iPhone 12 row.

- Step 2: the system will display the corresponding edit item screen -> proceed data editing - > select save to save the operation just done or select close to close the screen and cancel the operation.

*explanation:

- The delivery docket number field shows the number of inventory slips, including number prefix and inventory received number set in the setting
- Accounting date: used to select the settlement date of the warehousing slip
- Voucher day is used to enter the purchase date of the warehouse voucher
- The supplier name field is used to enter the name of the supplier of items
- The buyer field is used to select the name of the employee requesting the warehouse. Data at the field taken from the team-> team members screen
- Deliverer field used to enter recipient name
- The warehouse name field is used to select the warehouse to import items.
- Invoice field no. Used to enter invoice numbers
- Select item is used to select the item to enter the warehouse. Data taken from the items screen and displayed only items with the check option can be inventory
- The warehouse name field in the list is used to select the warehouse to import goods into.
- The qty field is used to enter the inventory number of items.
- The unit price field used to enter the purchase price of the data item at this field takes the value at the purchase price field of the selected item to display. Allows editing of purchase price
- The tax field is used to select taxes for items. If the item is already taxed, it will automatically show up in this field. Allow other taxes to be selected. Data from core's taxes screen
- The lot number field enters the batch number of the item
- Date manufacturing field: enter the production date of the item
- The expiry date field is used to select the expiration date of items; if data entry is available for this field when viewing item details, the expiration date of the items will be displayed in the expiry date tab.
- The amount field calculates the total item amount (excluding taxes) = qty * unit price
- The total goods value field is used to show the total amount of items excluding taxes= qty * unit price
- The value of the inventory field is used to display the warehousing value of the coupon
- The total tax amount field is used to show the total tax of the items in the list. The tax amount is calculated according to the formula = quantity * unit price * Tax %
- The total payment field is used to show the total value of the warehousing voucher. Total payment = total goods value + total tax amount

- Note field used to enter notes for input slips
- Button : click on this button to delete the added item
- Button : click on this button to reopen the popup and enter the serial number.

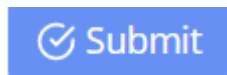

4.2. Editing of warehouse entry slips

Step 1: at the inventory receiving voucher-> screen, select the corresponding line to edit -> select edit function

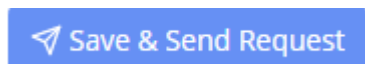

Delivery docket code	Supplier Name	Buyer	Choose from a Purchase order	Voucher Date	Total tax amount	Total goods value	Value of inventory	Total payment	Status
NK32		GTSSolution GTSS		2022-06-23	550	11,000	11,000	11,550	Approved
NK31		GTSSolution GTSS		2022-06-23	0	10,000	10,000	10,000	View
NK30	From Order Return: ReReturn5	test9 gtssolution		2022-06-22	0	1,210	1,210	1,210	Edit
NK29	CTX Company	GTSSolution GTSS		2022-06-22	250	5,000	5,000	5,250	Approved

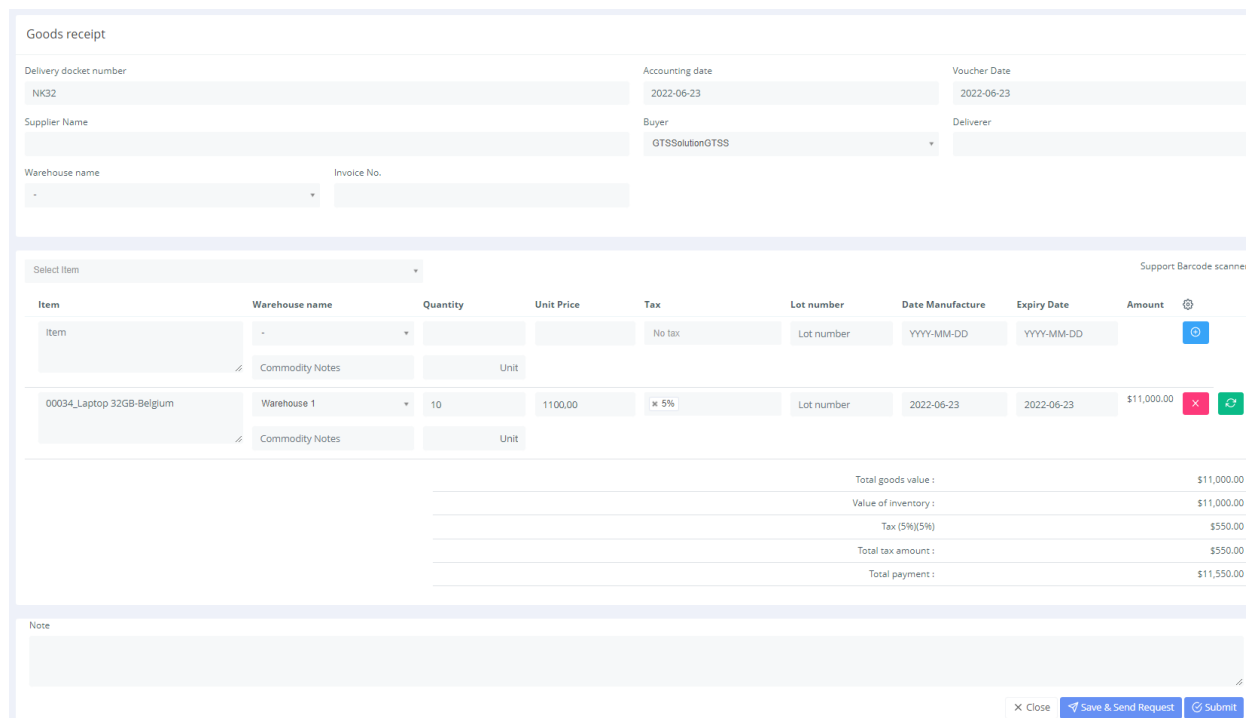

Step 2: the system will display the corresponding edit screen -> proceed data editing -> then press

to save the operation without submitting a critical request; browse or tap

to save and send the approval request to the first person in the approval process or select close to close the screen and cancel the operation just done it.

Item	Warehouse name	Quantity	Unit Price	Tax	Lot number	Date Manufacture	Expiry Date	Amount
00034_Laptop 32GB-Belgium	Warehouse 1	10	1100,00	5%	Lot number	2022-06-23	2022-06-23	\$11,000.00

Total goods value :	\$11,000.00
Value of inventory :	\$11,000.00
Tax (5%)(5%)	\$550.00
Total tax amount :	\$550.00
Total payment :	\$11,550.00

4.3. Delete the warehousing slip

Step 1: at the inventory receiving voucher-> screen, select the corresponding line you want to delete-> select delete function

Delivery docket code	Supplier Name	Buyer	Choose from a Purchase order	Voucher Date	Total tax amount	Total goods value	Value of inventory	Total payment	Status
NK32		GTSSolution GTSS		2022-06-23	550	11,000	11,000	11,550	Not yet approved
NK31		GTSSolution GTSS		2022-06-23	0	10,000	10,000	10,000	View
NK30	From Order Return: ReReturn5	test9 gtssolution		2022-06-22	0	1,210	1,210	1,210	Delete
NK29	CTX Company	GTSSolution GTSS		2022-06-22	250	5,000	5,000	5,250	Approved

Deleting an inventory with approved status reduces the inventory of items that collect deleted inventory slips, and the corresponding serial numbers (if created) are also deleted.

4.4. View details of warehousing slips

Step 1: at the inventory receiving voucher-> screen select the corresponding line to see the details -> select the view function

Delivery docket code	Supplier Name	Buyer	Choose from a Purchase order	Voucher Date	Total tax amount	Total goods value	Value of inventory	Total payment	Status
NK32		GTSSolution GTSS		2022-06-23	550	11,000	11,000	11,550	Not yet approved
NK31		GTSSolution GTSS		2022-06-23	0	10,000	10,000	10,000	View
NK30	From Order Return: ReReturn5	test9 gtssolution		2022-06-22	0	1,210	1,210	1,210	Delete
NK29	CTX Company	GTSSolution GTSS		2022-06-22	250	5,000	5,000	5,250	Approved

Step 2. Redirecting system to inventory receiving details page

#	Commodity Code	Warehouse name	Unit name	Quantity	Unit Price	Total payment	Tax amount	Lot number	Expiry Date
1	00034_Laptop 32GB-Belgium	Warehouse 1	Unit	10	1,100	11,550		550	
						Total goods value			\$11,000.00
						Value of inventory			\$11,000.00
						Tax (5%) (5%)			\$550.00
						Total tax amount			\$550.00
						Total payment			\$11,550.00

* explanation:

The button action is used to download pdf, view pdf, or edit inventory receiving

The send approval request button is used to submit a request for approval of a warehouse entry slip.

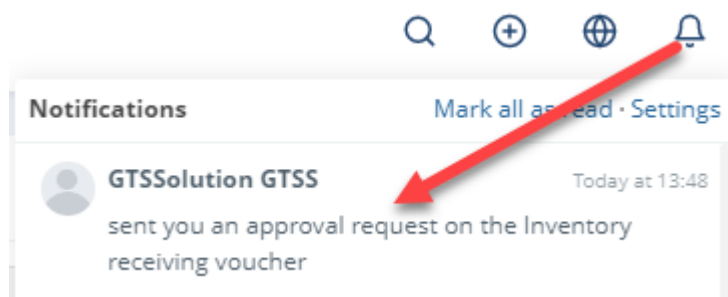

4.5. Submit a request for approval to the approval process

Step 1: Select the inventory slip as not yet approved -> press view

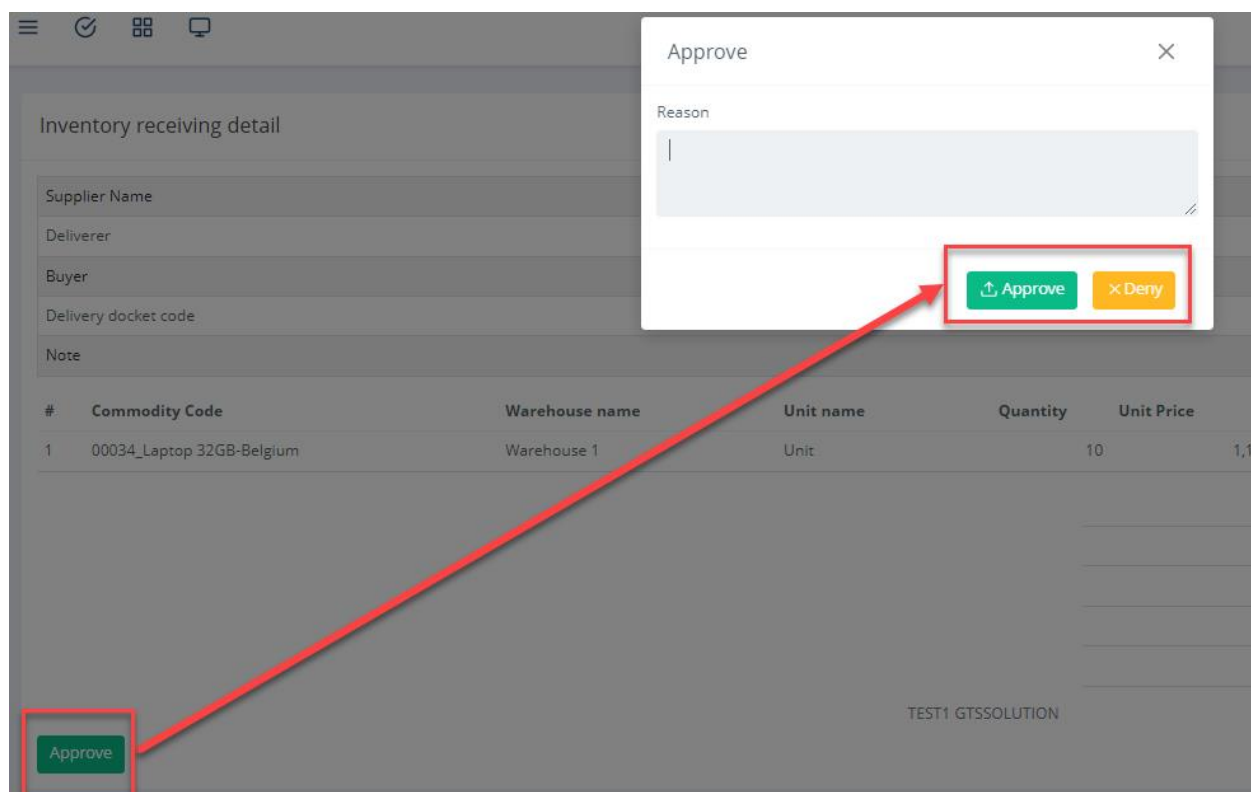

Delivery docket code	Supplier Name	Buyer	Choose from a Purchase order	Voucher Date	Total tax amount	Total goods value	Value of inventory	Total payment	Status
NK32		GTSSolution GTSS		2022-06-23	550	11,000	11,000	11,550	Not yet approved
NK31		GTSSolution GTSS		2022-06-23	0	10,000	10,000	10,000	View
NK30	From Order Return: ReReturn5	test9 gtssolution		2022-06-22	0	1,210	1,210	1,210	Delete
NK29	CTX Company	GTSSolution GTSS		2022-06-22	250	5,000	5,000	5,250	Approved

Step 2. : press 

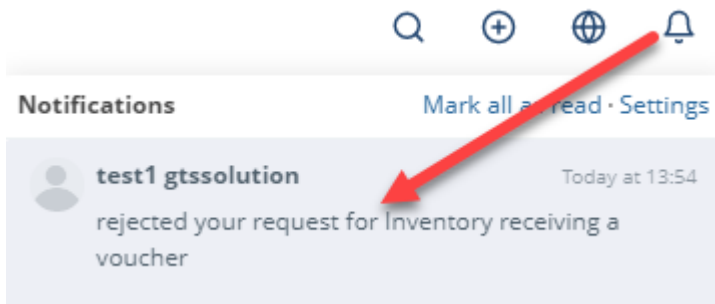

- ❖ For the approval process, select a person for approval
- The system sends a request for approval to the person in the process. The approver in the process of receiving the notification of the approval request via email and web - > proceed to select the notification or go to the inventory receiving voucher screen and view the details of the warehousing slip

- Select the approve function - > the system will display two options: approve and deny.
- + If you agree, enter the reason (can be entered or not) and select the approve function → the status of the inventory slip transferred from not yet approve to approve while increasing the inventory of the item
- + Select deny to reject and enter the reason if available→. The status of the inventory slip switches from not yet approved to reject, and the inventory of the item is constant

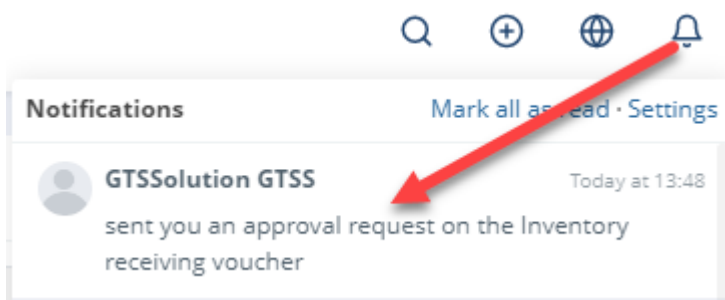

The creator of the entering voucher also receives notifications via email and the web when approve or deny approval is available.

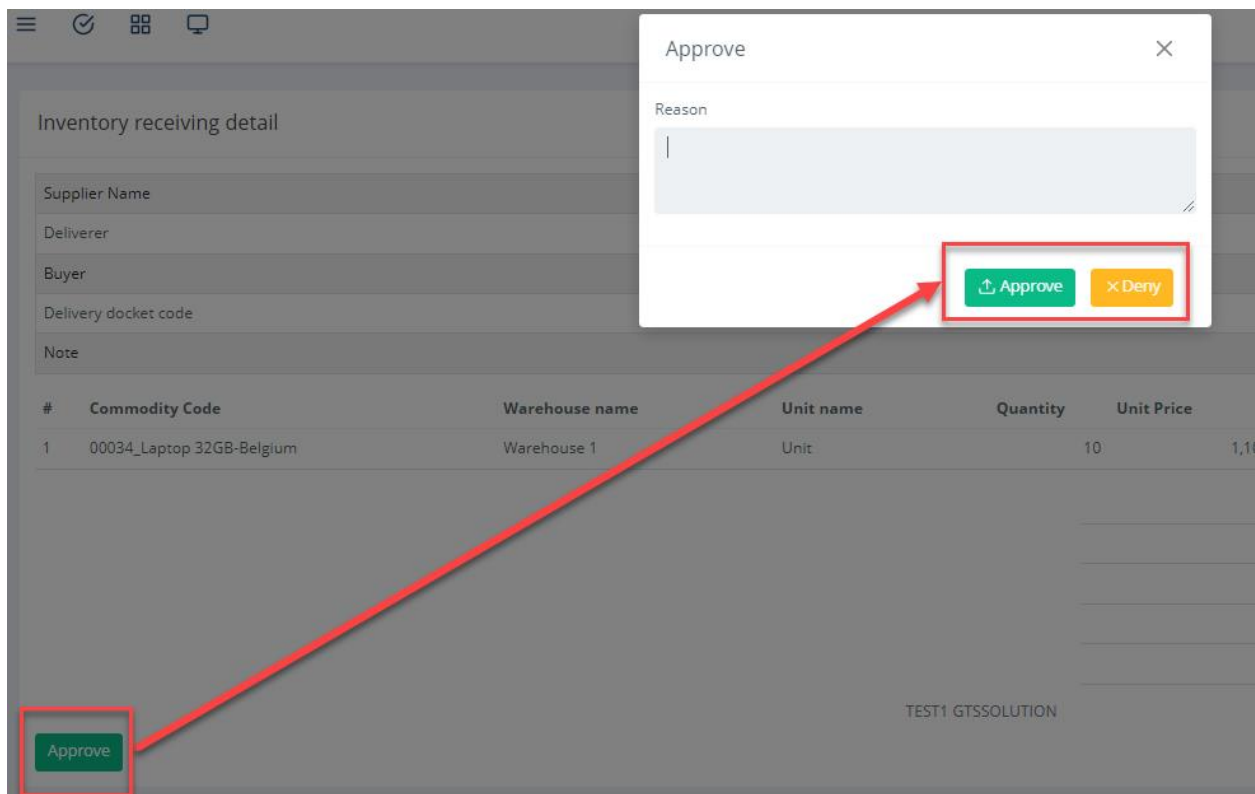

❖ For the approval process, select multiple people to approve

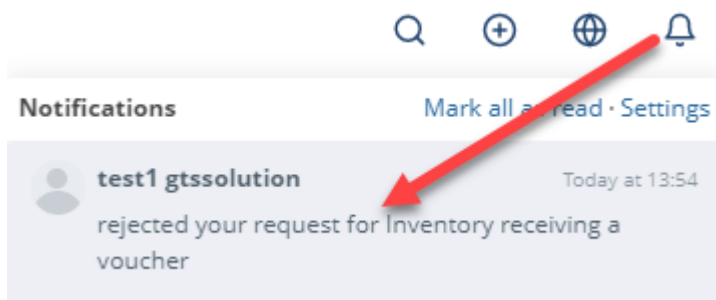

- Only the first person in the approval process receives a notification requesting approval via email and web - > proceed to select the notification or on the screening inventory receiving vouchers and view inventory details

- Select the approve function - > the system will display two options: approve and deny.
- + If you agree, enter the reason (can be entered or not) and select the approve function → the status of the entering voucher remains not yet approved and requires approval. Sent to the next person in the process. The next person proceeds with approval and continues to do so until they all approve and the status of the entering voucher is transferred. From not yet approve to approve while increasing item inventory
- + Select deny to opt out and enter the reason, if any→; the next person in the approval process does not receive a notification requesting approval and cannot continue to approve for this warehouse entry slip. The status of the inventory slip moves from not yet approved to reject while the inventory of the item remains unchanged

The creator of the entering voucher also receives notifications via email and the web when approve or deny approval is available.

❖ For the approval process, including approve + sign

Similar to the approval process that selects multiple people for approval, depending on whether the process of selecting the signature action is at the last step or not, there is an event difference.

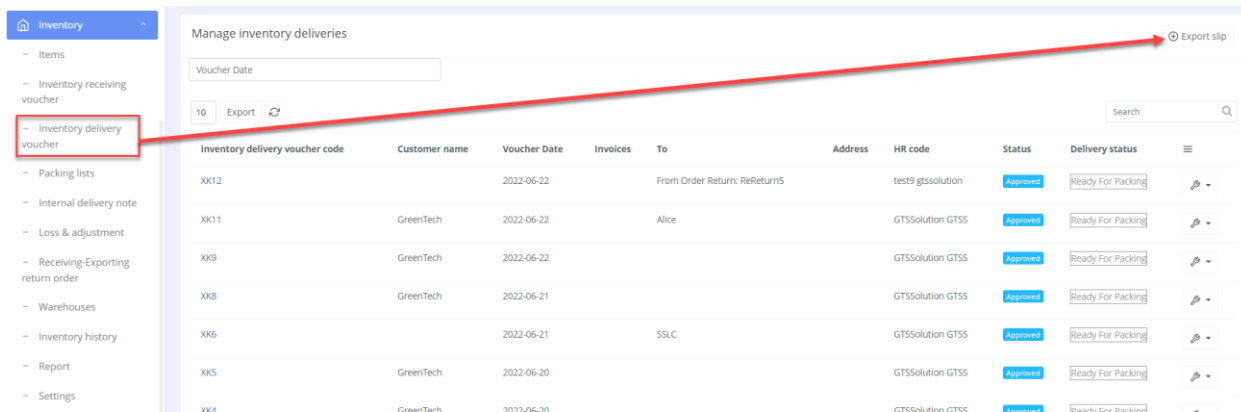

+ If the signature action is not the final step of the process, only when this person completes the signature will the approval request be sent to the person? Next

+ If the signature action is the last step, only when this person completes the signature does the status of the entering voucher switch from not yet approved to approve while increasing the inventory. Inventory of items

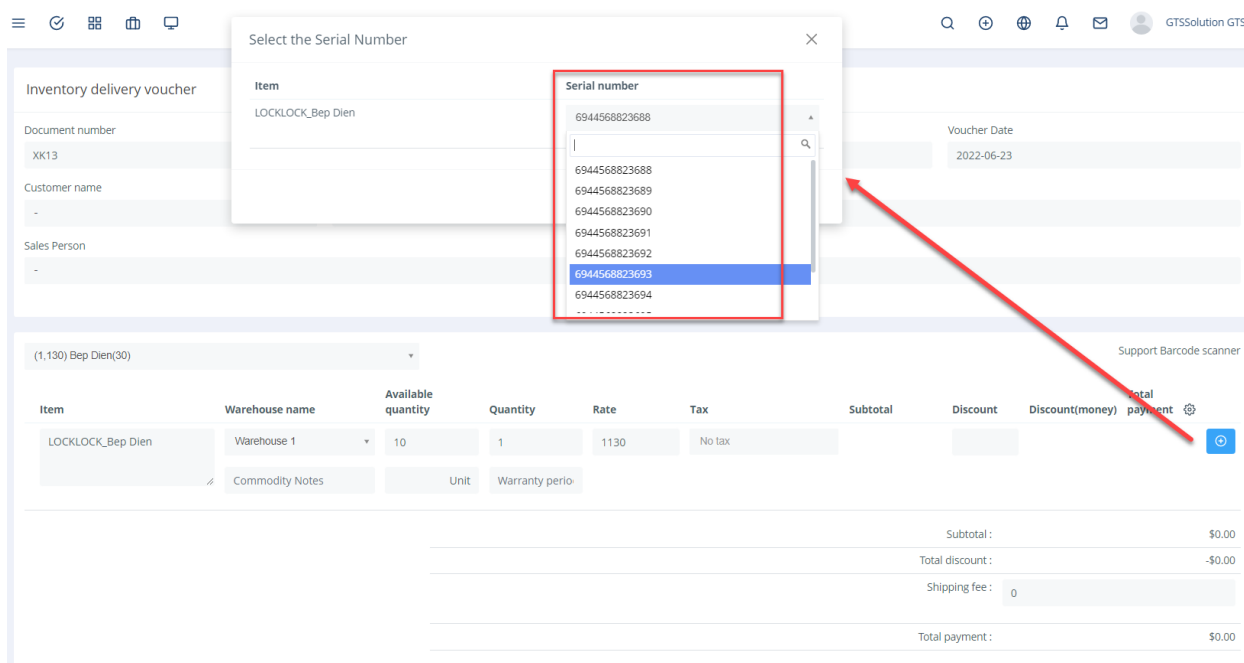

5. Inventory delivery voucher

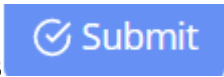

5.1. Add new warehousing slips

- Step 1: Select the inventory delivery voucher menu-> select the export slip button

- Step 2: the system displays the inventory delivery voucher screen -> enter the necessary data -> then tap  to add this item to the export slip -> then the display shows popup information the serial number will export (if the item enters the serial number). You can change the serial number -> press save to save the operation

- Step 3. Then press  to save the operation without submitting an approval request or press  to save and send the approval request to the first person in the approval process; browse or select close to close the screen and cancel the operation just done.

Step 2. : press

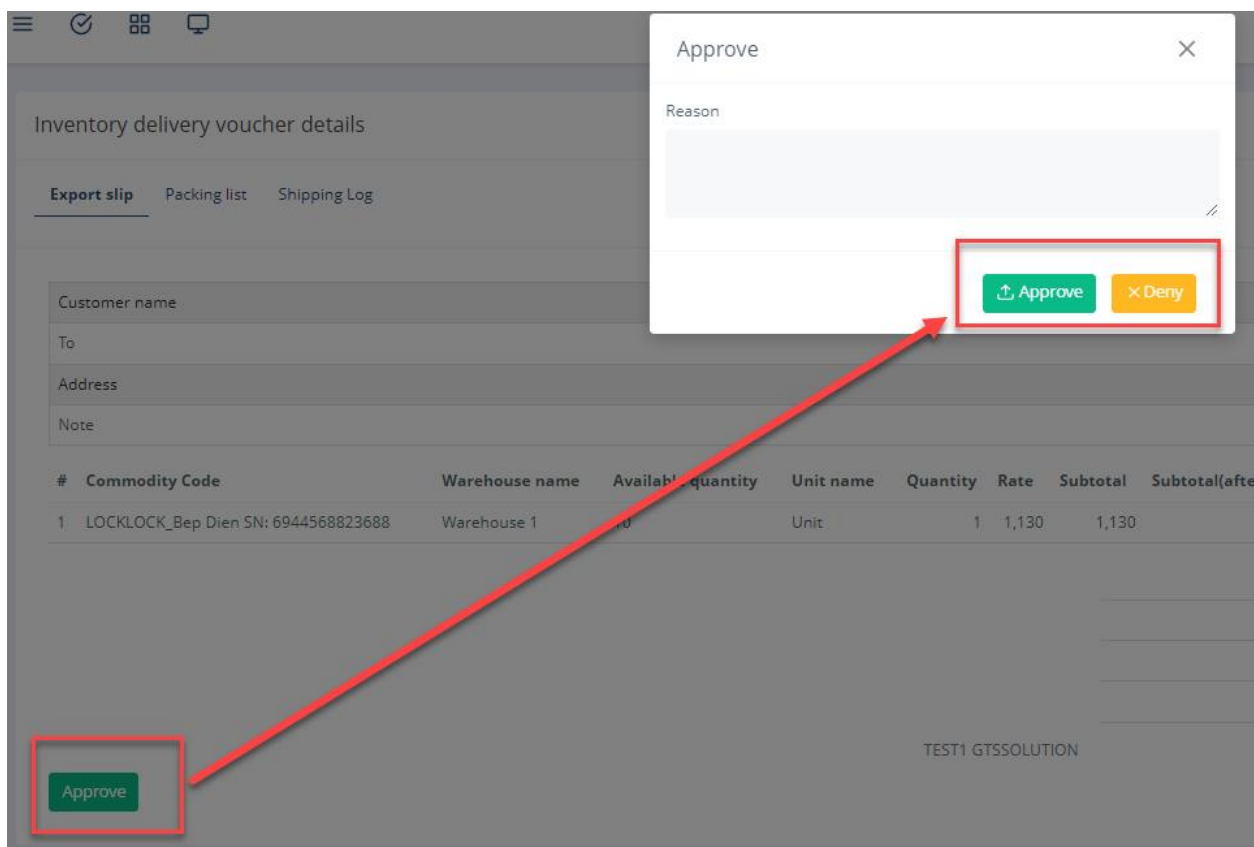

Send approval request

❖ For the approval process, select a person for approval

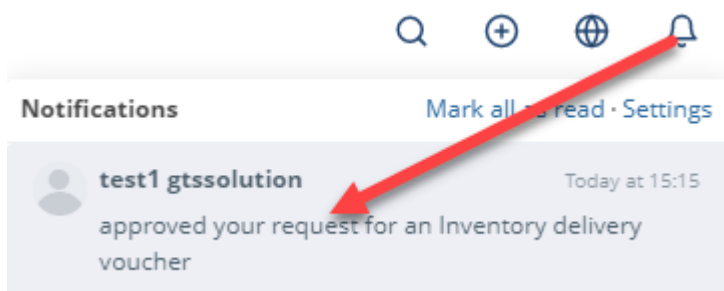

- The system sends a request for approval to the person in the process. The approver in the process of receiving the notification of the approval request via email and web - > proceed to select the notification or go to the inventory delivery voucher screen and view inventory details

- Select the approve function - > the system will display two options: approve and deny.
- + If you agree, enter the reason (can be entered or not) and select the approve function → the status of the export slip transferred from not yet approve to approve while reducing the inventory of items, marking the serial numbers that have been exported (if there is a serial number)
- + Select deny to reject and enter the reason, if any→; the status of the inventory slip moved from not yet approve to reject, and the inventory of the item is constant

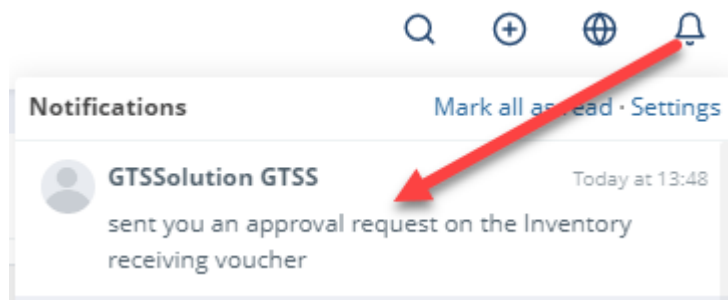

The creator of the inventory slip also receives notifications via email and the web when the approval or deny approval is obtained.

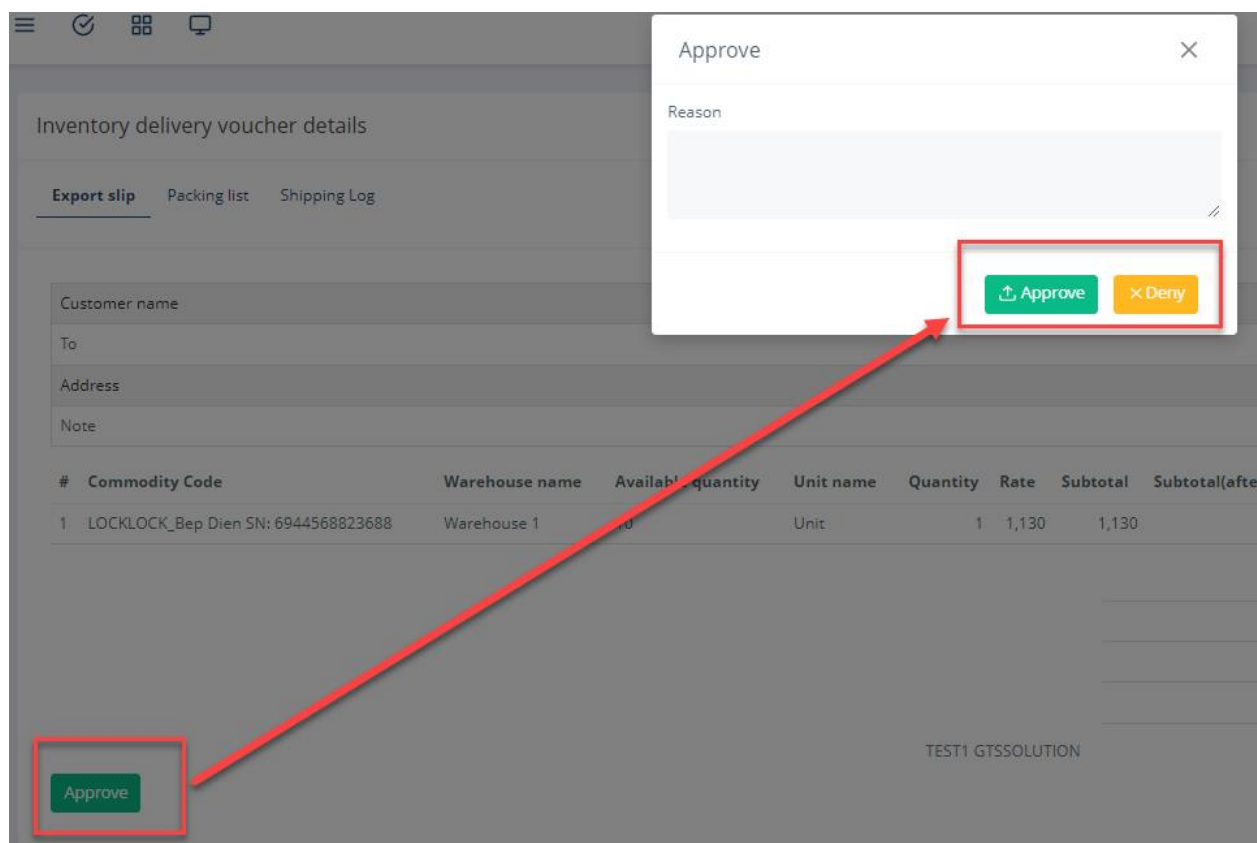

- ❖ For the approval process, select multiple people to approve

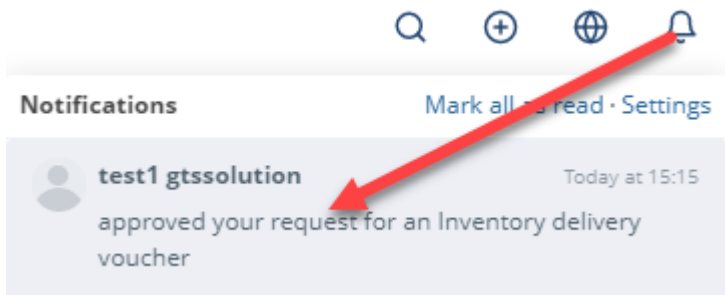

- Only the first person in the approval process receives a notification requesting approval via email and web -> proceed to select the notification or on the screening inventory receiving vouchers and view inventory details

- Select the approve function -> the system will display two options: approve and deny.
- + If you agree, enter the reason (can be entered or not) and select the approve function → the inventory slip status remains not yet approved and requires approval. Sent to the next person in the process. The next person proceeds with approval and continues to do so until all are approved, the status of the out-of-stock voucher transfers. From not yet approve to approve while reducing the inventory of items, marking the serial numbers that have been exported (if there is a serial number)
- + Select deny to opt out and enter the reason, if any→; the next person in the approval process does not receive a notification requesting approval and cannot continue to approve for this warehouse slip. The inventory status moves from not yet approved to reject, and the inventory of the item is constant

The creator of the inventory slip also receives notifications via email and the web when the approval or deny approval is obtained.

❖ For the approval process, including approve + sign

Similar to the approval process that selects multiple people for approval, depending on whether the process of selecting the signature action is at the last step or not, there is an event difference.

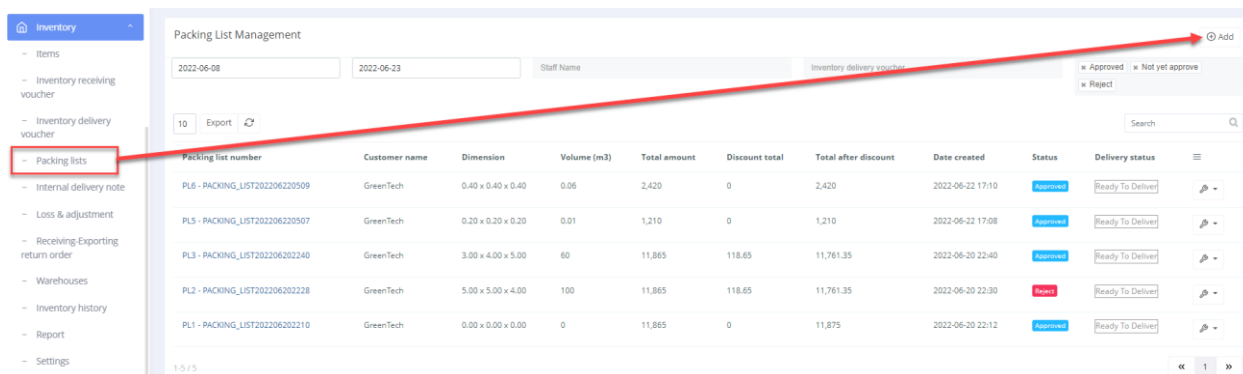

- If the signature action is not the final step of the process, only when this person completes the signature will the approval request be sent to the person? Next
- If the signature action is the final step, only when this person completes the signature does the status of the inventory slip go from not yet approved to approve simultaneously. Reduce inventory of items, mark serial numbers that have been exported (if the serial number is entered)

6. Packing lists

A stock voucher is created on multiple packing lists. If the first packing list is made up of a portion of the inventory slip and has been approved, the second packing list only shows the rest of the inventory slip.

6.1. Add a new packing list

Step 1: Select the packing lists menu-> select the add button

- Step 2: the system displays the added packing list screen ->; enter the necessary data -> then tap

to save the operation without submitting an approval request or pressing

to save and submit an approval request to the first person in the approval process or to select close to close the screen and cancel the operation just performed

- Truờng volume (m3) = width (m) * height (m) * leng (m)
- Client note field used to enter customer notes
- Packing list number field: prefix + number preconfi configured in prefix setting
- The item column displays the item name with the serial number(if any) of the selected inventory sheet
- Qty field: automatically filled according to the selected inventory slip. If the item does not have a serial number, the number can be edited. Conversely, if the item has a serial number, the number cannot be edited.
- Rate field: load from the selling price of the item in the selected inventory slip
- Tax: allows you to choose a variety of taxes. Load by selected warehousing slip
- Subtotal: calculates the total value of each item, excluding taxes. Calculated by formula = qty * sale price
- Discount: enter % discount or load according to the selected export slip
- The discount field (money) is used to calculate the discount value of each item and calculate the formula (qty * sale price * tax) * discount
- Total discount field: used to calculate the total discount of the coupon.
- Truờng total payment: (qty * sale price * tax) - total discount
- Shipping fee field: the user enters the shipping cost himself. Can be edited
- Total payment field: calculates the total payment of the voucher and calculated according to the formula = subtotal + total tax + total discount + shipping fee

After successfully creating a packing list, the packing list is displayed in the details of the warehouse slip.

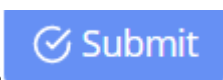

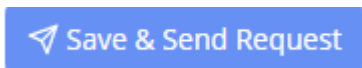

6.2. Edit packing list

Step 1: at the packing list screen -> select the corresponding line to edit -> select edit function

Step 2: the system will display the corresponding edit packing list screen -> proceed to edit the data -> then

press  to save the operation without submitting a request approve or tap  to save and submit an approval request to the first person in the approval process or select close to close the screen and cancel the operation the work just did.

Edit Packing List

Step 2. : press

Send approval request

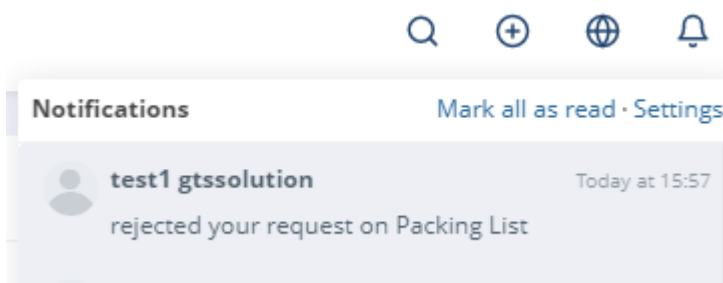

- ❖ For the approval process, select a person for approval
- The system sends a request for approval to the person in the process. The approver in the process of receiving the notification of the approval request via email and the web - > proceed to select the notification or go to the packing list screen and view packing slip details

- Select the approve function - > the system will display two options: approve and deny.
- + If you agree, enter the reason (can enter or not) and select the approve function → packing list status switch from not yet approve to approve → if packaged in full warehousing slips can no longer be packaged for this warehousing slip. Conversely, if a portion of the inventory slip is packaged, the next packing only shows the rest of the unpacked inventory slip.
- + Select deny to reject and enter reasons if available→ packing list status switches from not yet approve to reject - > allow re-creation of packaging for this inventory coupon

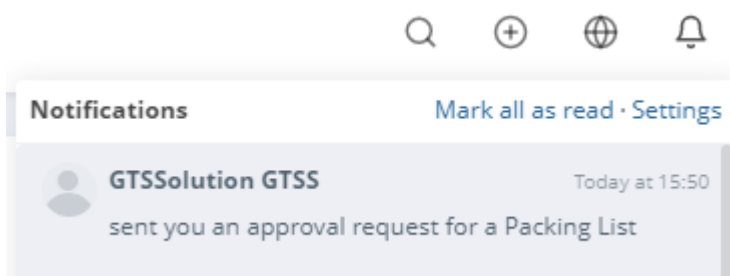

Packing list holders also receive notifications via email and the web when the approval or deny approval is available.

❖ For the approval process, select multiple people to approve

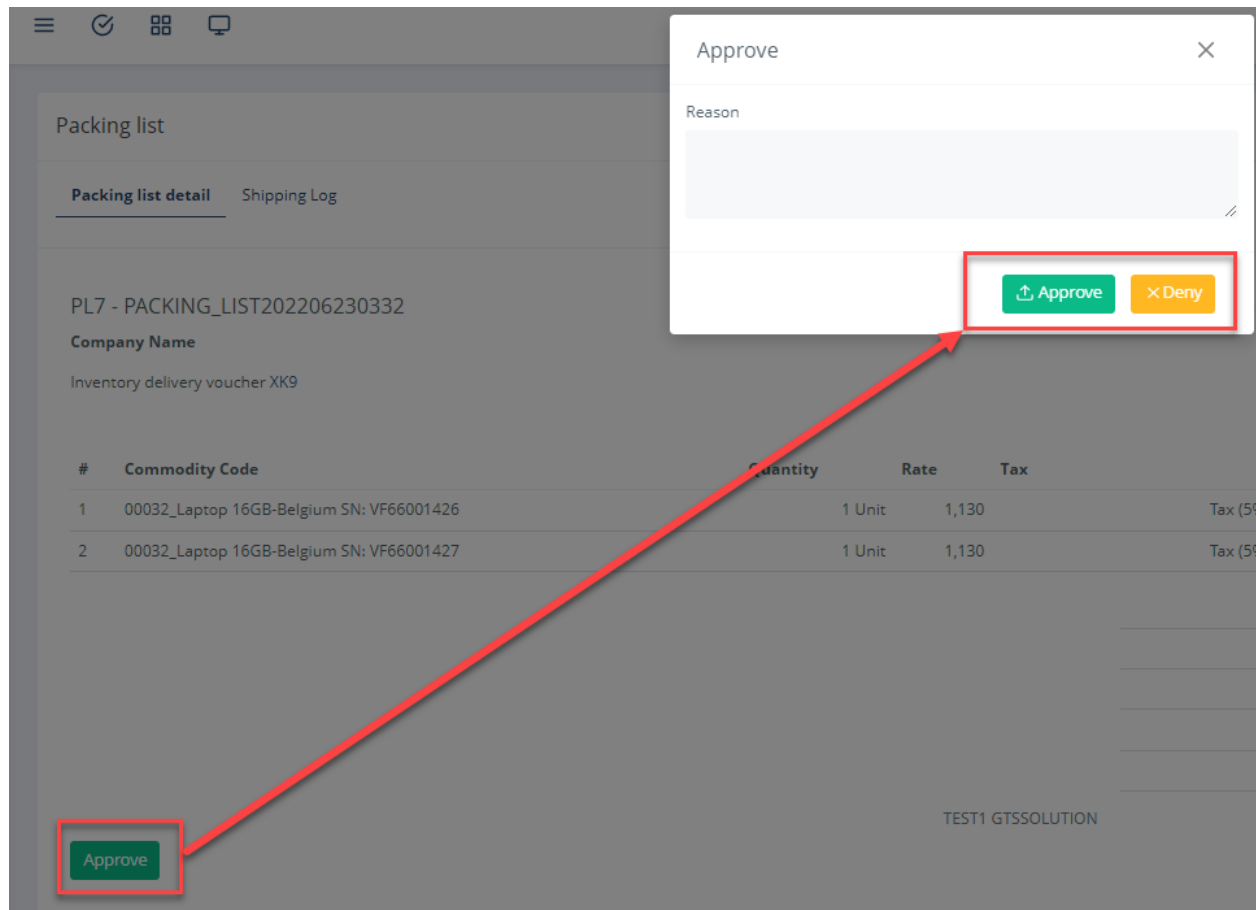

- Only the first person in the approval process receives a notification requesting approval via email, and the web - > proceed to select the notification or go to the packing list screen and see packing slip details

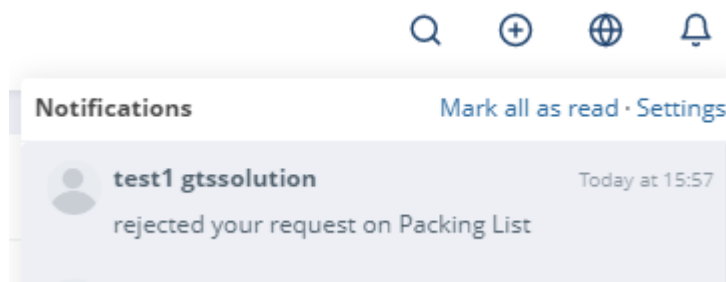

- Select the approve function - > the system will display two options: approve and deny.

+ If you agree, enter the reason (can be entered or not) and select the approve function → the inventory slip status remains not yet approved and requires approval. Sent to the next person in the process. The next person proceeds to approve and so on until they all approve ⇒ then the packing list status moves from not yet approved to approve → if you pack the entire inventory slip, you can no longer create a package for this warehouse voucher. On the contrary, if one part of the warehousing slip is packed, the next packing only shows the rest of the unpacked inventory slip. Package.

+ Select deny to opt out and enter the reason, if any→. The next person in the approval process does not receive a notification requesting approval and cannot continue → packing list status switches from not yet approved to reject - > allows re-creation of packaging for this warehouse slip.

Packing list holders also receive notifications via email and the web when the approval or deny approval is available.

❖ For the approval process, including approve + sign

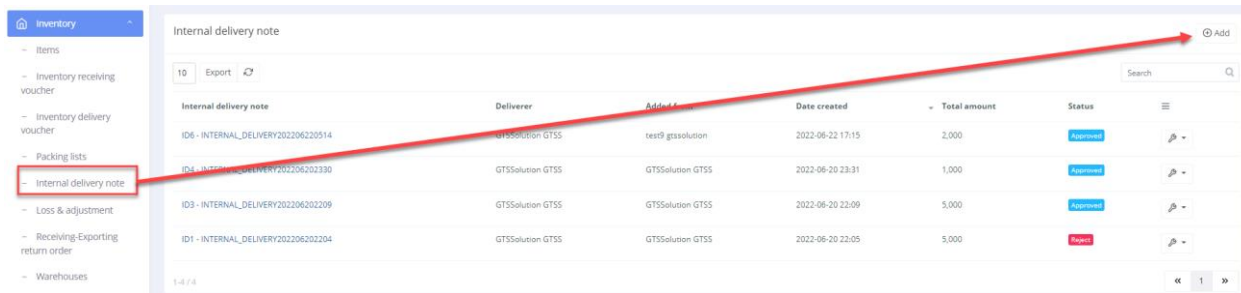

Similar to the approval process that selects multiple people for approval, depending on whether the process of selecting the signature action is at the last step or not, there is an event difference.

- If the signature action is not the final step of the process, only when this person completes the signature will the approval request be sent to the person? Next
- If the signature action is the last step, only when this person completes the signature does the status of the out-of-stock voucher go from not yet approved to approve → if packaged completely, the inventory slip can no longer be packaged for this warehouse slip. Conversely, if a portion of the inventory slip is packaged, the next packing only shows the rest of the unpacked inventory slip.

7. Internal delivery note

7.1. Add a new internal delivery note

Step 1: select the internal delivery note-> menu to select the add button

- Step 2: the system will display the internal delivery note screen -> enter the necessary data -> then tap  to add this item to the warehouse transfer slip -> then press save to save the operation or select close to close the screen and cancel the operation just done

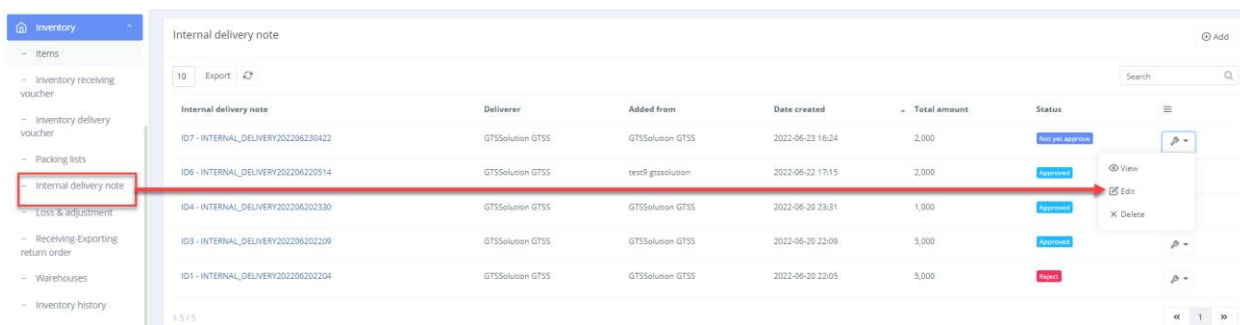

*explanation:

- The internal delivery note name field is the name of the warehouse transfer slip, and it gives birth to itself.
- Accounting date field: used to select the settlement date of the warehouse transfer slip
- The voucher day field is used to enter the export date of the warehouse transfer slip

- The internal delivery note number is a prefix + number prefix + number prefix transfer number preconfigured in the setting
- The deliverer field is used to select the recipient. Data were taken from the team-> team member screen
- Select item field: displays items with a check option that can be inventory. If the item has a serial number, the system prioritizes selecting the items assigned to the serial number and selecting the first serial number in the list to transfer.
- From stock name field: used to select the export warehouse, only load the warehouses that this item contains in it.
- To stock name field: used to select the receiving warehouse. Data is taken from the warehouse screen and can only select warehouses that are in the display state
- The available quantity field shows the current inventory of the item in the selected repository.
- Quantity field: enter the quantity of warehousing. The quantity must be less than or equal to the available quantity.
- Unit price field: load from the purchase price of the selected item
- The amount field is the total warehouse transfer value of the item. Quantity * unit price formula
- The total amount field calculates the total warehouse transfer value of all items in the coupon
- Note field used to enter notes for warehouse transfer slips
- Button : click on this button to delete the added item

7.2. Edit internal delivery note

Step 1: at the internal delivery note -> screen, select the corresponding line to edit -> select edit function

Step 2. : press

Send approval request

❖ For the approval process, select a person for approval

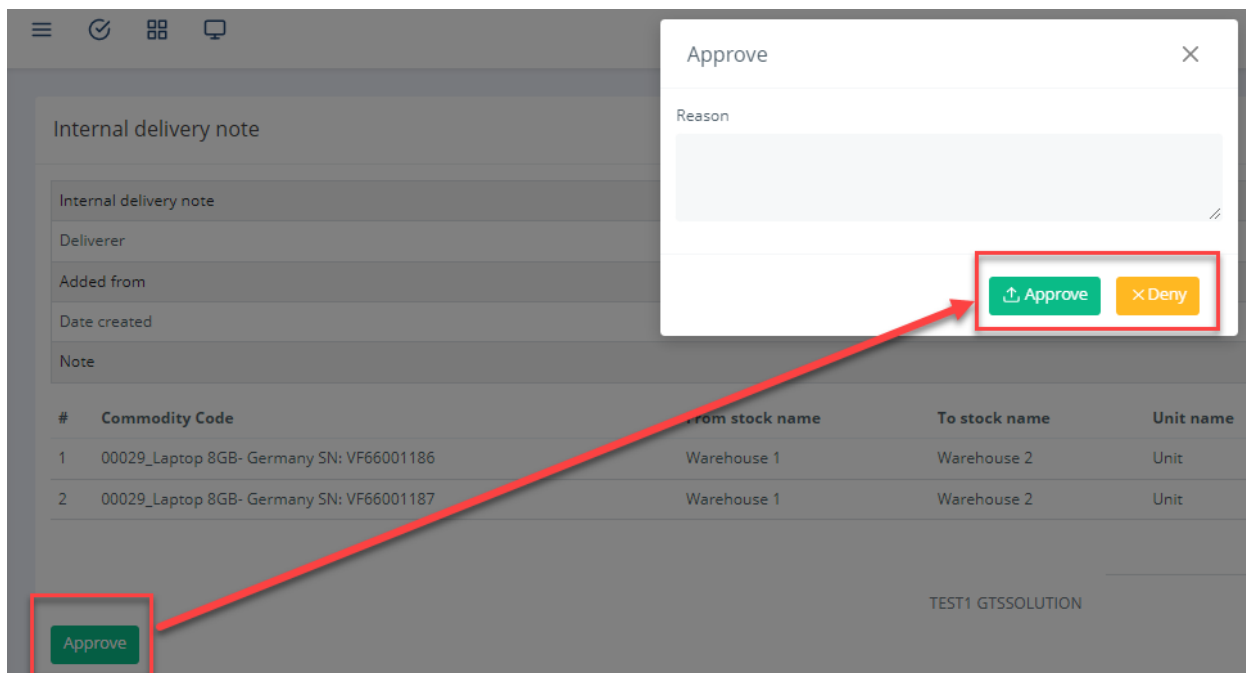

- The system sends a request for approval to the person in the process. The approver in the process of receiving the notification of approval request via email and the web - > proceed to select the notification or go to the internal delivery note screen and view internal warehouse transfer slip details

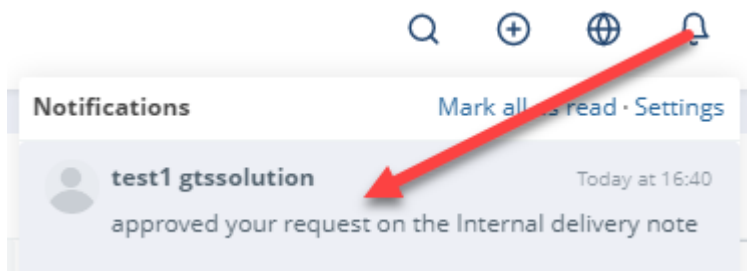

- Select the approve function - > the system will display two options: approve and deny.

+ If you agree, enter the reason (can be entered or not) and select the approve function → internal delivery status to switch from not yet approve to approve → inventory of the item in the warehouse transfer down, the item is transferred to the incoming warehouse and increase the inventory at the incoming warehouse. Record the transaction history in the transaction history tab (in item details). If the item has a serial number, mark the moved serial number in the transaction history tab. Also, record history in the inventory history menu

+ Select deny to reject and enter a reason if any→ internal delivery status switches from not yet approve to reject - > inventory is constant, no items are transferred

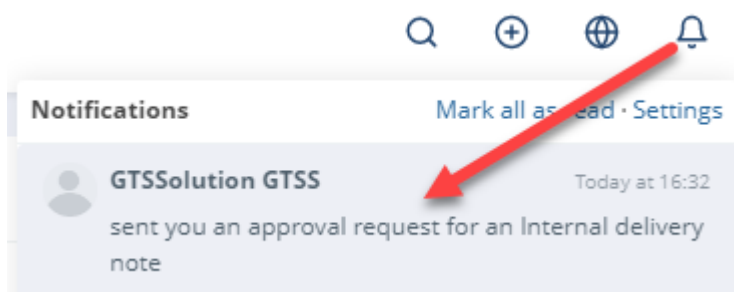

Internal delivery voucher creators also receive notifications via email and the web when the approval or deny approval is available.

❖ For the approval process, select multiple people to approve

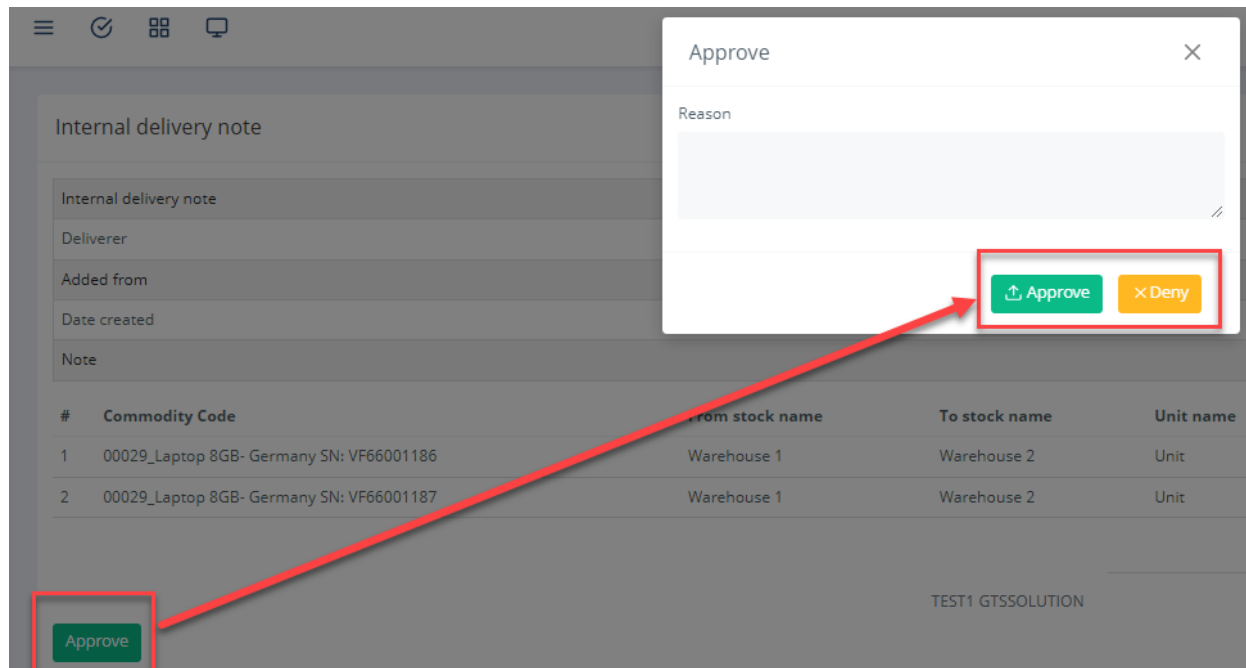

- Only the first person in the approval process receives an email and web approval request notification -
> proceed to select the notification or go to the internal screen delivery and view warehouse transfer slip details

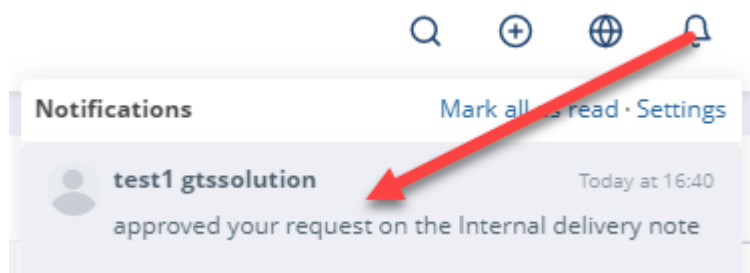

- Select the approve function -> the system will display two options: approve and deny.
+ If you agree, enter the reason (can be entered or not) and select the approve function → the inventory slip status remains not yet approved and requires approval. Sent to the next person in the process. The next person conducts approval and continues to do so until all approve → internal delivery status moves from not yet approved to approve → the inventory of the item in the warehouse is reduced, the item is transferred to the incoming warehouse and increases the inventory in the incoming warehouse. Record the transaction history

in the transaction history tab (in item details). If the item has a serial number, mark the moved serial number in the transaction history tab. Also, record history in the inventory history menu

+ Select deny to opt out and enter the reason, if any→; the next person in the approval process does not receive a notification requesting approval and cannot continue → internal delivery status switches from not yet approve to reject - > inventory is constant, no items are transferred

Internal delivery voucher creators also receive notifications via email and the web when the approval or deny approval is available.

❖ For the approval process, including approve + sign

Similar to the approval process that selects multiple people for approval, depending on whether the process of selecting the signature action is at the last step or not, there is an event difference.

- If the signature action is not the final step of the process, only when this person completes the signature will the approval request be sent to the person? Next
- If the signature action is the final step, only when this person completes the signature does the status of the out-of-stock voucher switch from not yet approved to approve → the inventory of the person. Items in the warehouse are transferred down, and the item is transferred to the incoming warehouse and increases the inventory in the incoming warehouse. Record the transaction history in the transaction history tab (in item details). If the item has a serial number, mark the moved serial number in the transaction history tab. Also, record history in the inventory history menu

8. Loss & adjustment

There are two types of warehouse adjustments: loss and adjustment increase.

- Adjust inventory reduction => need to enter the lost serial number; otherwise, entering it will randomly retrieve the serial number to mark the cancellation
- Adjust inventory increase => need to enter the increased number and enter the serial number (can enter or not)

8.1. Add new warehouse adjustments

Step 1: Select the loss & adjustment menu > select the add button

ID	Loss adjustment name	Type	Time (lost or adjusted)	Added from	Date created	Reason	Status
23	LOSS_ADJUSTMENT202206220523	Adjustment increase	2022-06-22	test@gtssolution	2022-06-22	Adjustment increase 1 serial number for Samsung S21 (SSSNIN0000001)	Adjusted
22	LOSS_ADJUSTMENT202206220521	Loss	2022-06-22	test@gtssolution	2022-06-22	Loss 1 serial number Samsung S21	Adjusted
21	LOSS_ADJUSTMENT202206212310	Adjustment increase	2022-06-22	GTSSolution GTSS	2022-06-22		Rejected
20	LOSS_ADJUSTMENT202206212309	Adjustment increase	2022-06-22	GTSSolution GTSS	2022-06-22		Rejected
19	LOSS_ADJUSTMENT202206212249	Adjustment increase	2022-06-22	GTSSolution GTSS	2022-06-22		Adjusted
18	LOSS_ADJUSTMENT202206212239	Adjustment increase	2022-06-22	GTSSolution GTSS	2022-06-22		Adjusted

- Step 2: the system will display the loss adjustment name screen -> select type as the loss to create inventory coupons, or select type as adjustment increase to increase inventory -> later that enters the required data -> then  tap to add this item to the repository adjustment slip -> if the item has a serial number - series, the screen is displayed the popup market enters the serial number of the damaged or lost product; otherwise the system will automatically retrieve the random serial number.-> then press submit to save the operation or select close to close the screen and cancel the operation just done

Enter the serial number of the damaged or lost product, otherwise the system will automatically get a random serial number.

	Serial number
1	

Close
Submit

- Step 3. Press submit to save the operation or select close to close the screen and cancel the operation just done

*explanation:

- Loss adjustment name field: is the name of the adjustment slip. This field is self-generating
- The warehouse field is used to select warehouses that need inventory adjustments
- The time field (lost or adjusted) selects the adjusted date
- Type field selects adjustment type, and there are two types of loss and adjustment increase
- The reason field used to enter the reason for an adjustment
- Button : click on this button to delete the added item
- Button : click to reopen the popup enter the serial number

8.2. Editing

Step 1: at the loss & adjustment -> screen select the corresponding line you want to edit -> select edit function

ID	Loss adjustment name	Type	Time (lost or adjusted)	Added from	Date created	Reason	Status

View Edit Delete

Step 2 : press Send approval request

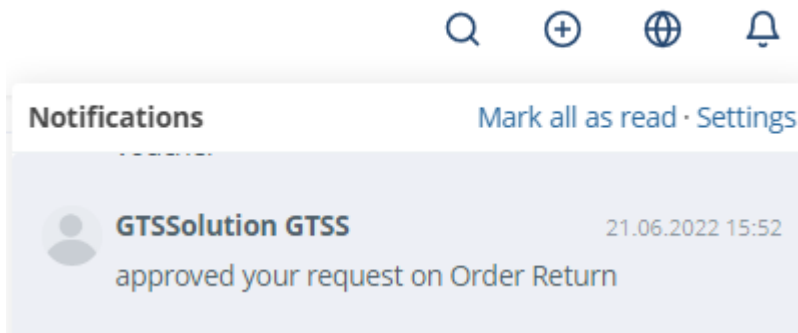

- ❖ For the approval process, select a person for approval
- The system sends a request for approval to the person in the process. The approver is in the process of receiving the notification of approval request via email and web - > proceed to select the notification or go to the "receiving - exporting return order" screen and see the details.

- Select the approve function - > the system will display two options: approve and deny.
- + If you agree, enter the reason (can enter or not) and select the approve function → the transaction status moves from not yet approve to approve → an "inventory receiving voucher" coupon will automatically be generated from data taken from the "receipt return order", and the "receipt return order" will require the same approval as when creating a manual "receipt return order".
- + Select deny to reject and enter a reason if any→ the transaction status switches from not yet approve to reject - > no "inventory receiving voucher" is created.

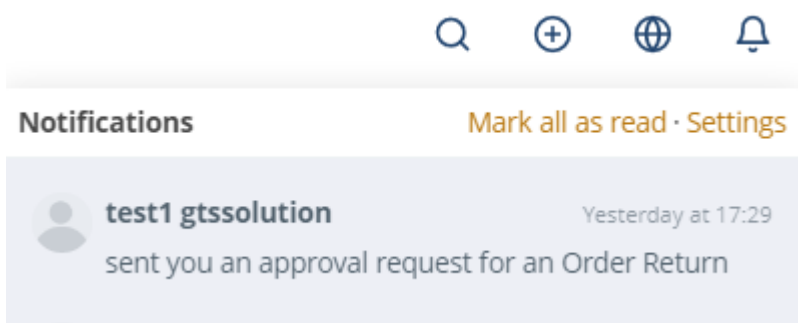

The creator of the receipt return order also receives notifications via email and the web when approved approve or deny

❖ For the approval process, select multiple people to approve

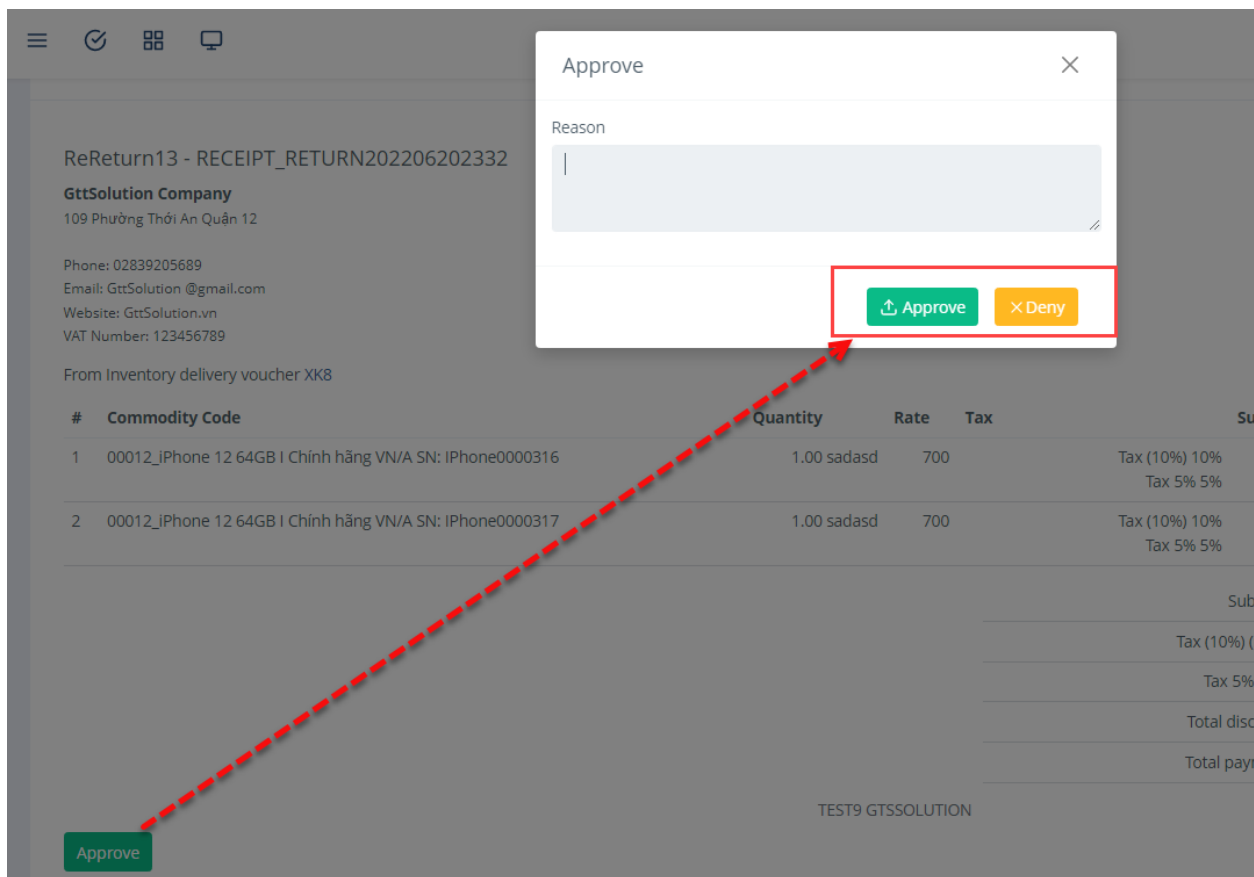

- Only the first person in the approval process receives a notification requesting approval via email and web - > proceed to select the notification or on the screen "receiving - exporting return order" and see chi.

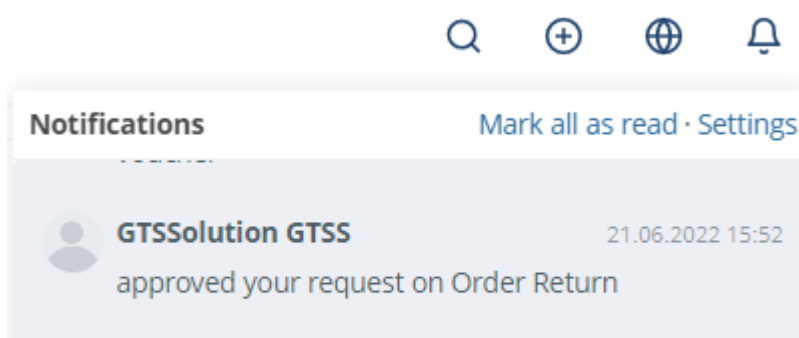

- Select the approve function - > the system will display two options: approve and deny.

+ If you agree, enter the reason (can be entered or not) and select the approve function → the "receipt return order" status remains not yet approved and requires approval. Sent to the next person in the process. The next person proceeds with approval and continues to do so until all approve → receipt return order status moves from not yet approve to approve → an "inventory receiving voucher" voucher is automatically generated from data derived from the "receipt return order", and the "receipt return order" requires the same approval as when creating receipt "return order" manual

+ Select deny to opt out and enter the reason if any → the next person in the approval process does not receive a notification requesting approval and cannot continue → "receipt return order" status switches from not yet approve to reject - > no "inventory receiving voucher" is created.

The creator of the "receipt return order" also receives notifications via email and web when approved approve or deny

❖ For the approval process, including approve + sign

Similar to the approval process that selects multiple people for approval, depending on whether the process of selecting the signature action is at the last step or not, there is an event difference.

- If the signature action is not the final step of the process, only when this person completes the signature will the approval request be sent to the person? Next
- If the signature action is the final step, only when this person completes the signature does the status of the out-of-stock slip go from not yet approve to approve → a coupon "inventory receiving voucher" is automatically generated from data taken from the receipt return order, and the "receipt return order" requires the same approval as when creating a manual "receipt return order."

Step 2. : press

 Send approval request

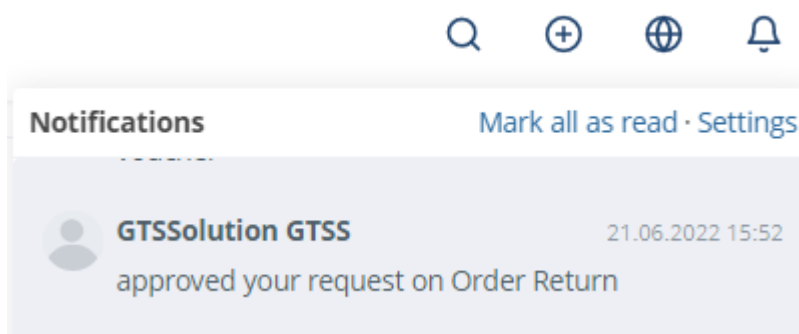

- ❖ For the approval process, select a person for approval
- The system sends a request for approval to the person in the process. The approver, in the process of receiving the notification of the approval request via email and the web - > proceeds to select the notification or go to the screen "receiving - exporting return order" and see the details.

- Select the approve function - > the system will display two options: approve and deny.
- + If you agree, enter the reason (can enter or not) and select the approve function → transaction status switch from not yet approve to approve → an inventory delivery voucher. It will automatically be generated from data derived from "delivery return purchasing goods", and the "inventory delivery voucher" will require the same approval as when creating a manual "inventory delivery voucher".
- + Select deny to reject and enter the reason if available→; the transaction status moves from not yet approve to reject - > no "inventory delivery voucher" is created.

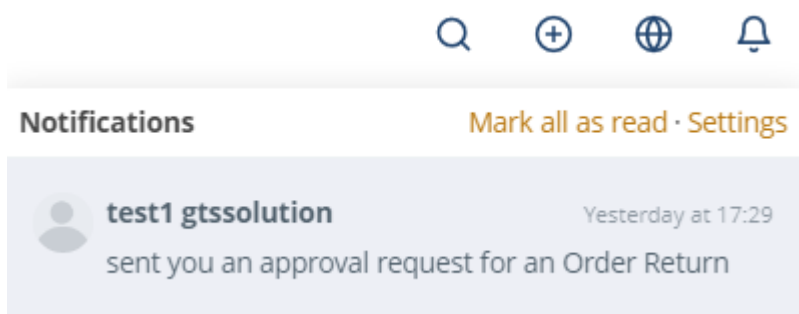

The creator of the "delivery return purchasing goods" coupon also receives an email and web notification when approval or denial approval is issued.

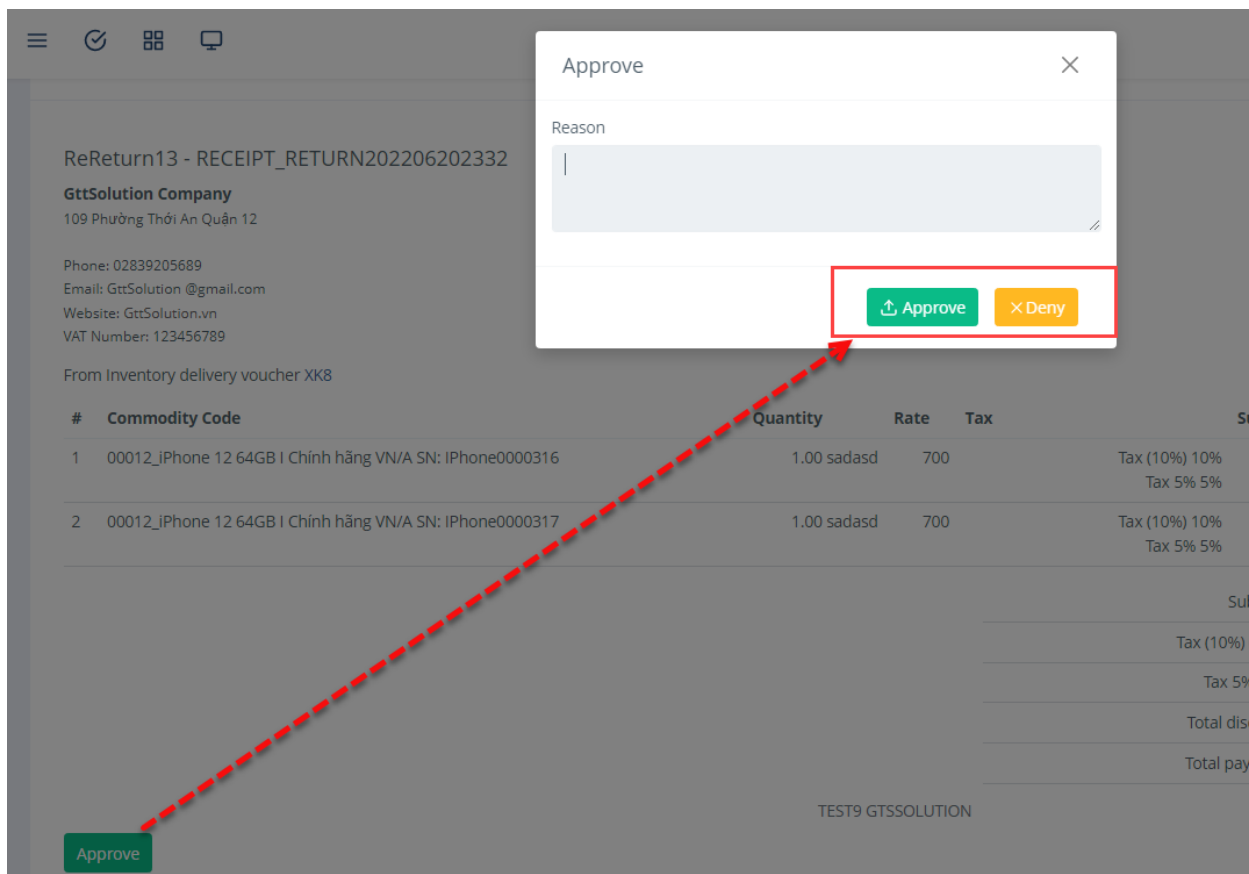

❖ For the approval process, select multiple people to approve

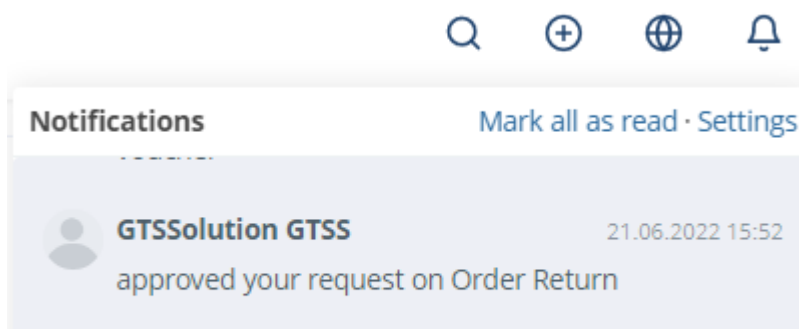

- Only the first person in the approval process receives a notification requesting approval via email and web - > proceed to select the notification or on the screen "receiving - exporting return order" and see details.

- Select the approve function - > the system will display two options: approve and deny.
- + If you agree, enter the reason (can be entered or not) and select the approve function → the status of the "delivery return purchasing goods" coupon is still not yet approved; at the same time love, the approval bridge is sent to the next person in the process. The next person proceeds with approval and continues to do so until all approve approval → the status of "delivery return purchasing goods" transfers from not yet approved to approve → an inventory delivery voucher is automatically generated from data taken from "delivery return purchasing goods," and the "inventory delivery voucher" requires the same approval. As if creating a manual "inventory delivery voucher."
- + Select deny to opt out and enter the reason if any→ the next person in the approval process does not receive a notification requesting approval and cannot continue → the "delivery return purchasing goods" status moves from not yet approve to reject - > no "inventory delivery voucher" is created.

The creator of the "delivery return purchasing goods" coupon also receives an email and web notification when the approval or deny approval is issued.

❖ For the approval process, including approve + sign

Similar to the approval process that selects multiple people for approval, depending on whether the process of selecting the signature action is at the last step or not, there is an event difference.

- If the signature action is not the final step of the process, only when this person completes the signature will the approval request be sent to the person? Next
- If the signature action is the final step, only when this person completes the signature does the status of the out-of-stock slip go from not yet approve to approve → a coupon the "inventory delivery voucher" is automatically generated from data taken from "delivery return purchasing goods", and the "inventory delivery voucher" requires the same approval as when creating an inventory delivery voucher. In it:

- Open stock qty column: the number of inventory entered at the beginning of the period (add opening stock)

Open stock amount: = qty * purchase price

- Import in period qty column: total number of warehouses during filter time

Import in a period amount: summed up by "total payment" of warehouse entries during filter time

- Export in period qty column: total number of warehouses during filter time

Export in a period amount: calculated in a sum according to the "total payment" of warehouse exports during filter time

- Closing stock column: end-of-term inventory = open stock qty + import in period qty - export in period qty

Closing stock amount = calculates the total remaining inventory value according to the import price of each batch

For example, enter the warehouse twice

1st time: quantity ten prices 20

2nd time: quantity five prices 15

In which export 12 (10 products cost 20, 2 products cost 15)

=> number of 3

=> inventory price = 3*15 = 45 (not 3*10 = 30)

Default profit rate: taken on the item

Purchase price: is the warehouse price of the product (will be taken on the item)

Sale price: is the expected selling price of the product (will be taken on the item)

In there

Quantity = current inventory

Total_money = purchase price * quantity; (calculate the total amount of money remaining in stock through the

Profit ratio old = profit rate of the current item

1. Average cost of inventory = total_money / quantity

2. Profit rate inventory =

If in the "sales price" setting

Calculate the selling price using the cost and profit rate $\Rightarrow$ profit rate inventory = $((\text{sale price} / \text{average cost of inventory}) - 1) * 100$

Calculate the selling price using the selling price and profit rate $\Rightarrow$ profit rate inventory = $(1 - (\text{average cost of inventory} / \text{sale price})) * 100$

3. Profit rate differences = $((\text{profit rate inventory} - \text{profit ratio old}) / \text{profit ratio old}) * 100$

11.3. Inventory valuation report

The report calculates the expected profit based on the purchase price and selling price of the item.

13	LOCKLOCK	Bep Dien	Unit	29	1,130	1,000	32,770	29,000	3,770
Total :				687			651,841.16	572,000	79,841.16

The inventory column takes end-of-period inventory by filtering time

The purchase price column is the product's warehouse price (will take the price on the item),

The sale price column is the expected selling price of the product (will be taken on the item)

Amount sold column: will take the selling price on item*quantity because the reality is not sold at this time, so we do not know the actual selling price, expected value if sold at the same price as so (inventory *rate)

The amount purchased column will take the entry price (entry slip)*quantity (which may be miscalculated) because each import may be a different price

Expected profit column = amount sold - amount purchased

Report the warranty period of the product in the product with a warranty period x month

When creating an inventory slip for customers => calculate the warranty period to the date of the year. The report will show all warehouse products if there is a defined warranty term (if not => not displayed), on the report if red => too, expired warranty

Note: warranty expiry date must be selected to display filter results
